Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

The acceleration of US equities bull trend from the middle of last week was very impressive as it continued into Friday. As noted previous, while this is surely a response to the more business friendly incoming Trump administration, it is also a matter of what has lapsed that might have been a drag on the US.

We have already extensively explored the recent culprits in the now failed Italian governmental reform referendum and last Thursday's ECB meeting risks. Anyone interested in those factors should reference the Alert!! archives in the www.rohr-blog.com sidebar for more detail.

As of last week's late week US equities rally above multiple Oscillator resistances the real challenge is to monitor how they progress relative to those levels (see below.) On current form the anticipation of the Trump administration tax and regulatory reforms seems to open the door to major further upside equities potential. See the latest www.rohr-blog.com post for much more on that.

This is the critical consideration:

The December S&P 500 future push above the 2,180 area also finally overran the late-August 2,191.50 all-time lead S&P 500 future trading high three weeks ago. The pending expiration of the December contract into this Thursday-Friday means it is important to consider the March S&P 500 future against the weekly front month levels, incorporating its \$5.50 discount into those views.

Due to the recent more aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early year selloff) **extended weekly Oscillator levels now move up roughly \$7 each week.** That nearest threshold last week was 2,213-18, the low end of which is consistent with where it stalled two weeks ago and again last Wednesday morning. **So once that was overrun the only surprise in it pushing up to the next threshold at 2,238-43 was how quickly that transpired.** And as it was also above that last week, this week's Oscillator levels needed to be assessed.

The Oscillator escalation into this week meant the 2,238-43 threshold shifts up to the 2,245-50 range December contract Closed above last Friday. As it is holding up above it, this becomes near term lower support as well; including for the March contract as we get into Thursday-Friday. The extended Oscillator threshold this week has moved up to 2,280, with the ultimate resistance not until 2,305-10.
