**Dear Subscribers,**

**Even with at least a temporary thaw in the US government shutdown, there is a factor that makes it a bit chillier... literally the weather. The north-central US is closed for business today, possibly spilling over into tomorrow.**

**Most businesses have allowed it is too cold to risk asking anyone other than essential employees to come into work; schools do not want to see students outside waiting for buses when very rapid frostbite is a real concern.**

**How cold is it? While not at all the worst of it, north-suburban Chicago awoke to a -22F temperature this morning, yet with a -50F wind chill. It was 20 degrees colder in outlying areas. Here's a quick look at the wind <http://bit.ly/2UsZOd8> based on a north-suburban chimney. OK, you can go get a hot beverage now.**

**Of course, this is indeed only a temporary further drag on a US economy already hit by the shutdown, and will be made up in additional consumer purchases and school days once it passes. Yet other global economic drags remain to continue the 'bad news is good news' psychology. The US government shutdown still needs to see progress on a border security agreement to prevent a relapse, and weak EU and Chinese economies remain along with the US-China trade tiff.**

**On the Brexit front UK PM May seemed to achieve Parliamentary success, yet only to go back with more specific demands for concessions from the EU. The latter has been wholly resistant so far. In any event, we first need to see how the FOMC finesses all this today at the Chair Powell press conference (14:30 EST.)**

**The key is whether the Fed head sounds at all even subtly less hawkish in light of all these developments, as he should. If so, the ‘bad news is good news’ psychology will be further reinforced, which should be mutually positive for US EQUITIES, all GOVVIES and also the EMERGING CURRENCIES. If not, then the opposite may be the case.**

### **Market Quick Take**

**The FRONT MONTH S&P 500 FUTURE pre-December activity above the early 2018 lows is relevant once again with MARCH S&P 500 FUTURE back above 2,600-35 resistance. Along with lower 2,600 congestion it has been back above since Tuesday January 15th, that puts the 2,675-70 area (including the 2017 Close) back in play.**

**At this point it must be noted that the push back above the full 2,600-35 range has also ratcheted MARCH S&P 500 FUTURE back up into the October-early December trading range. The importance of that with the fresh weekly down channel UP Break (2,600) and key moving averages being exceeded is apparent on the 3-year weekly continuation chart (<http://bit.ly/2TjATZt>) (including weekly MA-9 & MA-13) updated through last Friday’s Close. Only a failure back below 2,600 area will restore any near-term bearish momentum. Yet there is also key higher resistance back up into the Negated 2,708 UP Break, interim mid-2,700 area congestion (also weekly MA-41), and prominent low-2,800 area top of the range.**

**While the December drop below early-2018 2,529-52 lows was critical due to next significant lower support not being until the major 2,400-low 2,300 area, that held its Tolerance into the early 2017 2,318 congestion area low right after Christmas. This can be seen on the monthly chart (<http://bit.ly/2VBvb6D>) updated through the end of last year; it highlights that the broad up trend support was held.**

**Consistently weak data along with previous sharp EQUITIES weakness had**

also encouraged GOVVIES to predictably push up again. That recently also exhibited the volatility which seemed to be missing on the previous US EQUITIES selloffs, even if the recent US EQUITIES surge and strong data has weighed on GOVVIES again to a limited degree.

Combining the remaining Brexit concerns and weaker global data had seen strong sister DECEMBER BUND FUTURE back above the 160.00-.30 area as well as the upper-160.00 area highs on its way to the 162.00-.50 area next resistance. On its Thursday DEC 6 expiration the MARCH BUND FUTURE was trading at a recently unusual 0.85 premium to December contract, and was already above 162.00-.50 area.

While it stalled temporarily into more major resistance in the 164.00-.50 area during the holidays, previous weak economic data and EQUITIES stalling into resistance had pushed it back above that range after holding only marginally back below it. Sustained recent activity above it leaves it closer to the 166.00-.50 major higher congestion.

And weak sister DECEMBER T-NOTE FUTURE well back above its 118-10 mid-May trading low also sustained its rally above higher trend resistance in the 119-00/-08 area. That pointed to the heftier 120-00 area congestion (also weekly MA-41) it is also pushed above in early December. That left the 120-24 area highs and previous trading highs into 121-12 area as next resistances it also exceeded on its way to a temporary push above next resistance in the 123-00 area prior to dropping only somewhat back below 122-00 even if holding around 121-12.

The same was true for DECEMBER GILT FUTURE above 122.00-.50, with next heavy congestion into the 124.00-.50 range it stalled into. That said, the MARCH GILT FUTURE was trading at roughly a 0.60 discount into the late-month December contract expiration. After the top of the year push back up into the 124.00-.50 range, it reversed to some degree to retest the 122.00-.50 range prior to moving back up again of late.

Similarly in FOREIGN EXCHANGE, a 'haven' bid that had returned to the US DOLLAR INDEX on the previous US EQUITIES drop has not been in evidence of late. As noted above, its typical crisis phase 'haven' bid can be the opposite if the US is the source of market stress.

**Even as the US DOLLAR INDEX reacts once again from near its mid-upper 97.00 resistance, it was holding no worse than the mid-96.00 area seen on previous recent dips. Yet the more major support remains into 95.50-.00 area it finally tested early this month prior to a rebound into the low-mid 96.00 area. Back down into the upper-95.00 area, additional major recent and historic congestion support remains into the 94.00 area.**

**Along with that EUR/USD that had surged back above 1.1400 to near the 1.1500 resistance in thin New Year's Day trading was back marginally below 1.1400 once again early this month. Next support into 1.1250-00 was again neared on the recent dip. While well back above 1.1400 last week and even temporarily above the 1.1500 area on recent US DOLLAR weakness, it had then dropped back below the 1.1400 area prior to the current rebound. More prominent resistance remains into 1.1600 area.**

**And the Brexit concerns that had dropped GBP/USD well below 1.28-1.30 toward next major support in the 1.25-1.24 area remain in place. And the 'bad-good' response to the Brexit bill failure has seen GBP/USD sustain activity well back above 1.2800. Already back above weekly MA-9 & MA-13 in the mid-1.2700 area, the higher likelihood of a Brexit delay has finally seen it push back above 1.3000 congestion as well. Yet the further question remains whether it can sustain activity above the 1.30 area (including weekly MA-41) on further Brexit developments?**

**And despite US changeability, the previous hint of US-China rapprochement encouraged AUD/USD to squeeze back above its historic .7200-50 area (also weekly MA-9 & MA-13.) However, that same negative early-December Trump 'Tariffs Man' tweet that hit US EQUITIES on the lower chances for US-China trade rapprochement also dropped AUD/USD back from a hopeful early-December test of the .7300-50 area to back below .7200-50. It was recently down into more major .7000 area congestion, with the .6825 nearly 9-year trading low below that. This was not a surprise on current Chinese economic weakness and fraught US-China relations, even if current potential rapprochement has it recovering toward another test of .7200-50.**

**And while the EMERGING CURRENCIES are still more country-specific trends than previous, they were also enjoying a bounce from support on US-China potential rapprochement that remains a key influence, along with the**

**self-inflicted wounds of the US DOLLAR on the unruly shutdown and other economic drags that are mitigated by the ‘bad news is good news’ assumed more accommodative central bank psychology.**

**The MEXICAN PESO that had seen USD/MXN drop back temporarily below its 20.00-20.20 congestion, had been back up on multiple November-December tests of the 20.50 area prior to sliding back below 20.00 again. It is also now below lower interim support at 19.70 as well as more major 19.60-.50 congestion. Next lower congestion areas are in a range from 19.20 (high end) it is currently below to interim 18.70 and ultimately 18.50-.40 (low end.)**

**And that is just part of the EMERGING CURRENCY return from weakness, as USD/ZAR had pushed up from below 14.00 to testing and failing from 14.50 again on its way back below 14.00 in November. Next lower support in the 13.60-.50 area was probed into the beginning of December prior to pushing temporarily back up into 14.40-.50 area and even 14.60 into the holidays prior to dropping back below 14.00 into the beginning of January. Those areas (including lower congestion) remain current resistance and support.**

**USD/RUB that had reacted back down from above 67.00 was back there again in the wake of imploding Crude Oil prices with next resistance as nearby as the 68.00 area. Even though the previous early December Fed shift had engendered slippage back below 67.00 there as well the encouragement both it and the OPEC situation had provided, the subsequent suffering of the Crude Oil market had USD/RUB back above 68.00 in December, even if it failed once again at the 70.00 area resistance (just like early September.) It has recently been back below both 68.00 and 67.00 (including weekly MA-9 & MA-13) with support back into 65.00 (including weekly MA-41.) So basically back into the more sustained 3-month trading range areas.**

**In the meantime, the still improved TURKISH LIRA had USD/TRY slipping once again from 5.50, even if it experienced an intraday spike above it on January 3rd. And on the previous weakness it refused to drop to next support into the 5.00 area, with weekly MA-41 now up into the recent 5.20 area congestion as well. Outside of that recent temporary spike higher, the last two months have still been mostly a trading range affair between 5.45**

**and 5.22 until the early January US-Turkey Syria disagreement put it back up for a test of 5.50 once again.**

**If it should sustain activity above it, next minor resistance is the recent 5.6230 spike high, yet with not much above that until 5.90-6.00. However, the US-Turkey dispute over the US military's Syria withdrawal seems to have died down, and US DOLLAR strength along with it.**

**While more so than ever obviously less relevant (as we have been noting for some time) on the standard report releases in the midst of more major global trade and political cross currents, this week's Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the [www.rohr-blog.com](http://www.rohr-blog.com) sidebar.**

**There are obviously important economic data releases in this split late month into the top of the following month on Friday. It all culminates Friday with global Manufacturing PMI's and the US Employment report that is expected to be released on time.**
