Subject: ROHR ALERT: HOLIDAY NOTICE

We are coming to you early today with our HOLIDAY NOTICE.

We are off on summer holiday for the balance of this week into Monday. We feel that Tuesday's ALERT!! amply summed up the background and potentials for the balance of this week.

The economic data seems to support our premise on the markets remaining stable for the balance of the week. And we want to be fully engaged again next week, as 'late summer' beginning then is different now than in the 'old days'. First of all, in the regular world out there, most US students are getting back to school where that used to be deferred until after the late summer bank holidays.

In the markets there are more critical influences next week than the remainder of this one. Tuesday brings global Advance PMI's, with very important German, UK and US data as the week unfolds. There is also the annual Jackson Hole (Wyoming) annual Economic Policy Symposium from Thursday through Saturday of next week providing a major blast of central bank-speak.

This is still the critical consideration (that maintains for the balance of the week):

The September S&P 500 future selloff two weeks ago Tuesday to Close below 2,160-55 was a window of opportunity for the bears. Yet as the US equities shook off their concerns about the Bank of England being too timid that Thursday along with the strong US Employment report on Friday saw September S&P 500 future easily push back above that area. It also extended above weekly Oscillator resistance at 2,165-70.

And the key this week is (due to a technical anomaly) that Oscillator resistance remains more or less in the 2,165-70 range. This sets up another challenge for the bears. Just as recent temporary weakness below the bottom of short term trading ranges have not seen any follow through, so it will likely be now.

This was apparent on last Wednesday's September S&P 500 future weakening below the early week 2,173,25 low, yet holding only temporary slippage back into the 2,170-65 key Oscillator threshold along with recent hefty congestion. Due to it still being the Oscillator area, it remains support this week.

Higher resistances now are the interim 2,185.00 area from last week the market has now slipped back below, yet with the more major level still up at the next major weekly Oscillator threshold (MA-41 plus 160) in the 2,200 area.
