Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,

This is an early critical short-term view in light of market activity:

While we were more circumspect on the MARCH S&P 500 FUTURE Wednesday, that was in part due to the erratic higher opening where the key lower levels were still quite important (as we indicated.) And as noted since last week, below 1,902-1,895 interim support the more major 1,865-60 area that it held all week last week on setbacks was still the critical area. And that was confirmed out of Wednesday's sharp test throughout the day on Thursday.

The bright note for EQUITIES yesterday was the **Bank of England Monetary Policy Committee** going to a full nine votes (versus 8-1 previous) to hold its **base rate steady at 0.50%**. Its Inflation Report press conference also **reinforced the degree to which the BoE is not considering raising rates anytime soon**. And opposite to the Fed that may be beginning to realize tightening is misguided, the BoE joins the ECB and BoJ in remaining very accommodative in the current weak global economic context.

This all played right into Tuesday's **more accommodative comments from typically hawkish New York Federal Reserve President Dudley**. The current **'bad news is good news' psychology** driving the equities recovery would be enhanced by the **Fed finally realizing it is suffering from 'normalcy bias'** we highlighted in the www.rohr-blog.com Fed's *'Normalcy Bias' Continues* December 16th post (i.e. right after the initial rate hike.)

Here's the critical consideration today: And that is likely why a much weaker than expected US Employment report this morning only saw a modest bit of MARCH S&P 500 FUTURE weakness back down the to low end of the 1,902-1,895 interim support in pre-Regular Trading Hours electronic trading. That will remain the important area to watch OVERALL (as in it might see some temporary erosion), even if the major 1,865-60 area will remain a more critical indication of whether the current 'bad news is good news' psychology can support the equities for a continued upside correction.

[For those of you who are subscribers, see the latest Concise Highlight TrendView video analysis from prior to the Employment report this morning at www.rohr-blog.com for more on the current trend evolution. It is available to all Gold and Platinum echelon subscribers along with the Market Observations that were added Thursday morning (after the BoE Inflation Report press conference.)]

NOTICE: The Rohr International, Inc. research team or its principals may already have entered positions or have orders working based on this view.

Thanks for your interest.

This Current ROHR TREND ALERT!! will be available soon via the sidebar at www.rohr-blog.com for Platinum echelon subscribers.
