Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

What remains the same is the overall soft economic data in spite of Thursday morning's strong US Durable Goods Orders. However, this morning's global Manufacturing PMI's and other data is almost all very weak. And yet, the equities are higher after anticipating the weak data yesterday.

How can this be? Well, it's back to anticipating that 'abysmal news is good news'", and it continues. While that might seem a bit odd, it is completely reasonable under the current circumstances. That is due to the concerns over the US Federal Reserve monetary policy being out of synchronization with the other global central banks, and ultimately too hawkish. Yet the extent of the weak economic data might also finally be eating away at the Fed's 'normalcy bias' (see our December 16th www.rohr-blog.com post right after the FOMC's first hike for more on that.)

Here's the critical consideration today: The key this morning is still that last Thursday's EQUITIES strength put the **MARCH S&P 500 FUTURE** back out above the 1,925-32 resistance, which also was still represents a Negation of the 1,922 DOWN Break from last week Thursday. That put the burden of proof was back on the bears to demonstrate the market could fail back below 1,922 to reinvigate the bearish tendencies; which it did not.

As noted on previous occasions, higher resistances are into the interim 1,950 area, so it's no surprise it was able to reach that once the trend reverted back to stronger activity after last week's Tuesday-Wednesday 'hiccup'. While the next interim resistance in the 1,958-62 area was tested Friday morning, the market dropped back below 1,950 later on Friday and continued to weaken Monday.

And as we expected, the EQUITIES still appear to want to hold pullbacks, and that is exactly what we saw on the MARCH S&P 500 FUTURE holding support back down into violated 1,925-32 resistance with a buffer to 1,922 on Monday. As such, we would still tend to treat each of these areas as the important technical thresholds for now.
