Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

What has changed to some degree is while the overall soft global economic data remains, the US data has improved to a goodly degree ever since last Thursday morning's strong US Durable Goods Orders. The same was true for Tuesday morning's weak global Manufacturing PMI's and other data into above-estimate US ISM Manufacturing and Construction spending.

This morning also saw the ADP Employment number come in at almost 30,000 above estimate. That will have some analysts revising their Friday US Employment report Non-farm Payrolls number up from the initial 185,000 (which was the exact same estimate out there for the ADP number prior to this morning's release.)

The point of all this is the degree to which the **MARCH S&P 500 FUTURE** has shifted from the threat of a very negative bear extension three weeks ago into 1,805. It is now into a sustained rally that is almost in a 'Goldilocks' matrix: weak offshore data restrains the Fed right into the improved US economic indications. While this has been true since last week, the reason we note it now is the Federal Reserve Beige Book release at 13:00 CST today. Worth watching what the districts have to say.

Here's the critical consideration today: The key this morning is still that last Thursday's EQUITIES strength put the **MARCH S&P 500 FUTURE** back out above the 1,925-32 resistance, which put the burden of proof back onto the bears.

As noted on previous occasions, higher resistances were into the interim 1,950 area, and again at 1,958-62 area that was tested Friday morning prior to pulling back. Yet what was the worst the market could do on Monday? Only a retest of the Negated 1,925-32 resistance. And so it goes in bear market rallies: they go up when they can't stay down!!

Out above the interim 1,958-62 area on Tuesday morning it is important to note the next major resistance are 1,970-75 and 2,010-20. That said, there are interim levels at 1,986 (top of gap up to Wednesday January 6th Close) and the 1,995 bottom of another early January gap. **We suspect that it can pull back to 1,962-58 or even somewhat lower. Yet with another relatively upbeat US Employment report expected Friday, it will likely be hard for it to remain down selloffs in front of it.**
