Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

As noted of late, the overall soft global economic data remains while US data has improved to a goodly degree ever since last week Thursday morning's strong US Durable Goods Orders. This continued into Wednesday afternoon's reasonably 'solid' Fed Beige Book release and the still weakish offshore data this week (including China, Europe and the UK.)

This reinforces the degree to which the **MARCH S&P 500 FUTURE** rally extension on Wednesday was **clearly now part of a 'Goldilocks' (data 'not too hot and not too cold') rally: weak offshore data restrains the Fed right into the improved US economic indications.** That continued in a quiet grinding way into Thursday, and it is **definitely reinforced by the specifics of the US Employment report this morning:** a much stronger than expected plus 242,000 Non-farm Payrolls was offset by shockingly weak -0.10% Monthly Hourly Earnings data by comparison. So it is the same story...

The continued strength of the equities now appears less a matter of 'Goldilocks and the Three Bears' than Goldilocks slays the bears.

Here's the critical consideration today: The key this morning is still that last Thursday's EQUITIES strength put the **MARCH S&P 500 FUTURE** back out above the 1,925-32 resistance, which put the burden of proof back onto the bears. As noted on previous occasions, the worst the market could do on Monday was only a retest of the Negated 1,925-32 resistance. And so it goes in bear market rallies: they go up when they can't stay down!!

Out above the interim 1,958-62 area on Tuesday morning it is important to note the next major resistances were 1,970-75 and 2,010-20. With the MARCH S&P 500 FUTURE out above the lower of those in the wake of Wednesday afternoon's Beige Book, it becomes near term support. That was clearly demonstrated by Thursday morning's trading lows (multiple tests of 1,975) prior to pushing higher. Wednesday's early low at 1,967 is now the obvious Tolerance of that support.

That said, the next interim resistance level is the 1,995 bottom of another January gap.
