Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

While Wednesday morning it was worth being a bit more circumspect on the JUNE S&P 500 FUTURE into the FOMC Wednesday and BoJ Thursday morning, the failure later on Thursday pointed to the sort of overall weakness we suspected would infect the stalling US equities at some point. And they are now sinking below some very key supports that portends the potential to head quite a bit lower on waning central bank influence into serial weak data.

Even given the importance of the positive influence of the 'Yellen Put', ECB President Draghi defending the independence of the ECB at last week Thursday's press conference in the face of renewed German criticism of low rates and extended QE does not seem to have fully reassured the equities.

And the response to a still accommodative FOMC was fairly subdued prior to the disappointment with the BoJ's lack of action this Thursday morning. That saw the June S&P 500 future slip below 2,075-78 key support late Thursday.

Here's the critical consideration today: However, as much as the June S&P 500 future looked like it was significantly stuck after failing to remain above the high end of 2,085 and 2,075 on previous swings, it still needed fail below it on at least a daily Close to trigger any further weakness.

As noted since last week, there appeared to be a real problem with the near-term up trend if June S&P 500 future should indeed fail back below 2,085 and 2,075. That is especially so with the lower of them also a Tolerance below (i.e. with a potential Negation of) the 2,078 major weekly chart channel UP Break.

Next lower critical support is into the 2,060-55 area gap higher from two weeks ago, and much below that it would appear to be headed into an even more major selloff once again. And there is now also real pressure on the bulls to rescue the trend back above 2,075-78 or suffer further weakness. Next lower supports are 2,035-32 and the 2,020-10 range. However, the failure form up into the 2,100 area once again very possibly also presages the next major selloff into the 1,900 or even the mid-low 1,800 areas... or even lower ground.
