Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

While we had been circumspect on the JUNE S&P 500 FUTURE into the top of this week, things got a lot more interesting on Tuesday's gap higher and sustained rally. The recovery from below some key support on Thursday in spite of the recent "Fear of Fed" squeezed the bears, as expected.

However, gapping back above more critical interim congestion Tuesday morning creates a decision on whether it is returning to a sustained bullish trend once again, or is ready to top out. All very critical over the next couple of sessions.

Here's the critical consideration today: The June S&P 500 future late April weakness below 2,075-78 key support was especially telling. That was the 'Negation' of the 2,078 major weekly chart channel UP Break, and that zone remains the key higher resistance (with a Tolerance to 2,085.)

More recently once again below next lower critical support into the mid-April 2,060-55 area (mid-April daily gap higher) was also where it stalled once again last week Wednesday prior to the post-FOMC minutes release selloff. **Yet the next important 2,035-32 interim support held with some slippage last Thursday. That is indeed very important, because the weakness below that area was supposed to be a DOWN Break from a major daily Head & Shoulders Top.**

Back above the 2,055-60 area after Tuesday morning's gap higher has put it into a critical near term decision. That is because **the significant Tolerance of that Head & Shoulders Top is the May 10th 2,080 trading high. Much above that (i.e. above the previous 2,085 congestion) the top is being Negated. That is not only a near term positive sign. It also reverses the downside momentum since the 2,105 April 20th trading high of the overall rally from the low 1,800 area February low.**

In other words, if the June S&P 500 future strengthens much further it is not just a violation of the next nominal resistance. It sets up a psychology that will at least nominally extend the rally above that 2,105 high. That is why the near term activity is so critical for the market. Next higher resistances are 2,120 and the overall 2,132 front month future rally high from May last of last year.
