**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

This is why we bothered to delve into the fundamental side Thursday morning. Last week's **serial weak international trade numbers are now weighing more heavily on global equities. Add to that a speech Thursday morning by Mario Draghi criticizing the political class for the lack of structural reform and the fears from the UK European Union referendum on June 23rd**, and you have more than enough to explain the weakening of EQUITIES and the continued strong bid in the GOVVIES.

**After the recent very weak +38,000 Nonfarm Payrolls number, US EQUITIES took on a 'bad news is good news' psychology. While that seemed to leave the bulls in control, we noted it would only maintain if the bad news did not get too much worse. We seem to have arrived at that juncture now.**

**All financial derivatives analysis has switched to the September contracts.**

**Here's the critical consideration today: The key lead contract levels for the S&P 500 future remain both the 2,075-78 and 2,085 areas. With the September S&P 500 future trading approximately \$9 below the front month June contract, that means the September contract post-US Employment report trading low at 2,075.50 remains very important on the current selloff. It is of course the equivalent of the June contract tests of the 2,085 area since pushing above it three weeks ago.**

**Also of course, as we head into the June contract expiration this Thursday, it will also be important for the September contract to show enough strength to push back above 2,085 in its own right. Anything less will leave it vulnerable, pending how it acts at the 2,075 level as well. While next lower interim front month (still June until Thursday) support is 2,060-55, the more major support is not until back down in the 2,035-32 range.**

**The front month resistance is the reinstated 2,105 previous high (from April 20th), with the September contract equivalent at 2,096. Higher front month resistance remains the 2,120 mid-2015 congestion and especially the 2,132 front month futures all-time high of the overall rally.**
