Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

Once again the global equities weaken on the combined serial weak international trade numbers, last Thursday's speech by Mario Draghi criticizing the political class for the lack of structural reform and the fears from the UK European Union referendum on June 23rd. That is more than enough to explain the weakening of EQUITIES and the continued strong bid in the GOVVIES.

Here's the critical consideration today: The key lead contract levels for the S&P 500 future remain both the 2,075-78 and 2,085 areas. With the September S&P 500 future trading approximately \$9 below the front month June contract, the September contract post-US Employment report trading low at 2,075.50 was a very important level which was violated after holding initially on Monday.

With the September S&P 500 future trading below 2,065 overnight, the risk is that it will also violate the 2,060 Tolerance of that support. This is very important for the September contract in its own right, as today into Wednesday that is also the broad up channel support from the major 1,808.70 February 11th low. While there are other interim supports below, if it Closes below that the up trend in the September contract from that low is failing into a fresh DOWN Break.

This is also important for the June S&P 500 future that remains the front month until its expiration on Thursday's Close. The failed broad weekly down channel (from last summer's high) 2,078 UP Break that it squeezed back above on May 25th would 're-fail' on any weakness too far below that level. Certainly back below 2,070 in the June contract (i.e. 2,060 in September contract) would qualify as that sort of failure, and that would bring weekly MA-13 back into play as well.

Of course the further consideration here is that after Thursday the discounted September contract will also need to be measured against all of the somewhat more elevated front month levels. **Lower front month supports remain 2,060-55 that is also a key daily gap area in the September contract, and the 2,035-32 that held with temporary slippage to 2,022 back on Thursday, May 18th to begin the recent bear squeeze. That trading low is also near the top of the more major 2,020-10 range support.**
