Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

What can we say. The review of the key weak areas of the fundamental psychology since the end of last week was in anticipation of the EQUITIES psychology turning much weaker. The combined serial weak international trade numbers, last Thursday's speech by Mario Draghi criticizing the political class for the lack of structural reform and the fears from the UK European Union referendum on June 23rd have combined to create a **distinct EQUITIES failure in spite of four accommodative major central bank announcements and some press conferences over the previous 17 hours into 06:00 CDT this morning.**

Here's the critical consideration today: The key lead contract levels for the S&P 500 future remained both the 2,075-78 and 2,085 areas. Yet in spite of the \$20 bounce from Tuesday's lows, the September S&P 500 future trading \$9 below the front month June contract could only challenge its post-US Employment report trading low at 2,075.50 into the FOMC press conference Wednesday afternoon.

With the September S&P 500 future trading below 2,065 into the low end of its 2,060-55 Tolerance Tuesday, it was critical that it managed to recover by late session. This is very important for the September contract as the broad up channel support from the major 1,808.70 February 11th low. While there are other interim supports below, if it Closes below that, the up trend in the September contract from that major low is failing into a fresh DOWN Break.

It is also important that the June S&P 500 future expires on today's Close. The failed broad weekly down channel (from last summer's high) 2,078 UP Break that it squeezed back above on May 25th gas 're-failed' on weakness too below that level which was only retested on Wednesday. Certainly back below 2,070 in the June contract (i.e. 2,060 in September contract) would qualify as that sort of failure, and that would bring weekly MA-13 back into play as well.

Of course the further consideration here is that **after today the discounted September contract will also need to be measured against all of the somewhat more elevated front month levels.** Lower front month support at 2,060-55 that is also a key daily gap area in the September contract has been violated. The 2,035-32 that held with temporary slippage to 2,022 back on Thursday, May 18th to begin the recent bear squeeze. That trading low is also near the more major 2,020-10 range support.
