**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

Once again we note that the recent evolution of the economic data along with central bank psychology has been very good news for the equities bulls. The key is that the improved US data has NOT created a more explosive US equities rally, and the weak US data points continue to create a restrained Fed psychology.

And the trend to set minor new all-time highs seen again this morning has not experienced any sustained setbacks. Even on last Wednesday's expected selloff it only briefly flirted with overrun weekly Oscillator resistance (more below) before rebounding to finish the session firm.

At this point the "good news is good news" psychology noted last Monday can work hand in glove with a seemingly contrary "bad news is good news" psychology that keeps the central banks friendly.

**This is the critical consideration:**

The September S&P 500 future selloff two weeks ago Tuesday to Close below 2,160-55 was a window of opportunity for the bears. Yet as the US equities shook off their concerns about the Bank of England being too timid that Thursday along with the strong US Employment report on Friday saw September S&P 500 future easily push back above that area. It also extended above weekly Oscillator resistance at 2,165-70.

And the key this week is (due to a technical anomaly) that Oscillator resistance remains more or less in the 2,165-70 range. This sets up another challenge for the bears. Just as recent temporary weakness below the bottom of short term trading ranges have not seen any follow through, so it will likely be now.

This was apparent on last Wednesday's September S&P 500 future weakening below the early week 2,173,25 low, yet holding only temporary slippage back into the 2,170-65 key Oscillator threshold along with recent hefty congestion. The recovery later in the day Wednesday reinforced the strength of that support.

Higher resistances now are the interim 2,185.00 area from last week, yet with the more major level still up at the next major weekly Oscillator threshold (MA-41 plus 160) in the 2,200 area.
