Subject:	ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

Deutsche Bank's travails are behind us (for now) as the focus gets back to the economic data and central banks. The data has been a bit better on balance (even out of the allegedly Brexit-crippled UK) even if Services PMI's disappointed to some degree. The Euro-zone and US figures over the past couple of days have been quite good, yet with the ultimate test from Friday's Employment report.

And it is a **big central bank week** right into the weekend. We've had quite a bit of ECB- and Fed-speak so far this week, and that **will intensify during the coming G20 meeting accompanied by the IMF/World Bank meeting into the weekend.**

Yet the stronger data has done more to weaken the govvies (i.e. send yields higher) than encourage any strength in the equities. In fact, that may be a good reason why the stronger data has not created a more aggressive equities rally extension, as we are **now into a renewed round of the "Fear of Fed" soap opera. That means technical activity will be very important.**

<u>This is the critical consideration</u>:

We have already reviewed at length the importance of the 2,160-55 area due to the <u>lead contract S&P 500 future</u> swings out of mid-July through early September. And the <u>December S&P 500 future</u> has stalled on recent rallies from not too far above it. The last few days have reinforced it with repeated failures.

As far as lower supports, we once again note the previous <u>December S&P 500 future</u> violation of nominal early August 2,141.50 trading low support was telling, leading to the early September test of the more prominent 2,120 and 2,105-00 congestion areas that remain major lower supports. **Yet more recently that 2,141.50 (with a bit of Tolerance) has proven to be more critical, as evidenced by it even holding on the Deutsche-driven selloff last week and again Tuesday.**

As such, <u>those levels will remain important near term finesse thresholds until one of them is more definitively violated</u>. Higher resistances remain 2,185-90 weekly Oscillator and hefty congestion, along with the extended weekly Oscillator resistance that moved up to 2,225 this week.
