**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

As articulated last Wednesday morning prior to the FOMC meeting minutes release, the operative influence on the equities was going to be the 'Fear of Fed'. And we were both right and wrong on the implications to be taken from that.

The continued weak data with some voting FOMC members determined to hike the rates at the December meeting did indeed previously weaken the equities. However, the anticipated reasons to doubt the Fed will even have the latitude to hike in December included weaker data that has indeed transpired. Yet the US equities have not weakened once again into the extended lower support.

We will possibly know more about that after this afternoon's Fed Beige Book release. However, be advised that is preceded by the Bank of Canada rate decision and press conference, and followed by Thursday morning's likely more critical ECB rate decision and press conference. And in any event there is a sizable amount of important economic data since this morning carrying over into the balance of the week, even if the US is absent on that front on Friday.

**This is (still) the critical consideration:**

We had already reviewed at length the importance of the mid-July through early September 2,160-55 low end of the trading range that was subsequently violated by the lead contract S&P 500 future. The December S&P 500 future did manage to recover sharply from September 12<sup>th</sup> overnight trading below the 2,120 support down to near 2,105-00, yet failed back up around the 2,155 area on that Monday's Close. And the subsequent rally failures into that area finally took their toll on the 'Fear of Fed' potential noted last Wednesday morning.

While the failure back below 2,141.50 area stalled on the rally last Wednesday and again on Friday, it was not necessarily all that negative until violation of 2,120 last Thursday morning. That pointed to Thursday's test of more major 2,105-00 area that the market neared prior to rallying back strongly. Also now back above 2,120 means 2,141.50 area will remain key resistance again this side of 2,155-60.
