Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

While from the middle of last week the operative influence on equities was going to be the 'Fear of Fed', that never dropped the US equities down to the more major lower supports we might have expected. In spite of (or maybe even because of) continued weak data with some voting FOMC members determined to hike the rates at the December meeting the equities have held up well...

...yet as noted for the past couple of sessions, so far only into the key higher resistance from which they are now weakening. The potential is still for a bit more near-term weakness that may still offer opportunities, but only if they weaken enough to get down to the more major lower supports (see below) whereas recently they have been trapped in the higher end of the technical range.

HOLIDAY NOTICE: In light of the degree to which this week's central bank influences are out of the way with little market response, we are taking off the first part of next week to prepare for the more major late month data releases from the end of next week into the following week.

So continue to finesse your market involvement based on levels noted below.

This is (still) the critical consideration:

We had already reviewed at length the importance of the mid-July through early September 2,160-55 low end of the trading range that was subsequently violated by the lead contract S&P 500 future. The December S&P 500 future did manage to recover sharply from September 12th overnight trading below the 2,120 support down to near the much more major 2,105-00, yet failed back up around the 2,155 area on that Monday's Close. And the subsequent rally failures into that area finally took their toll on the 'Fear of Fed' potential noted last Wednesday morning.

While the failure below 2,141.50 area stalled on the rally last week Wednesday and again on Friday, it was not necessarily all that negative until violation of 2,120 last Thursday morning. That pointed to Thursday's test of more major 2,105-00 area that the market neared prior to rallying back strongly. Also now back above 2,120 means 2,141.50 area will remain key resistance again this side of 2,155-60, as seen once again over the past couple of days.
