Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

Our overview remains much the same as previous on the market's capacity to look past the immediate 'received wisdom' last week to reflect a positive intermediate-term outlook. That has now extended into the near term lack of any good-sized reaction prior to pushing up to the more major resistance (see below.)

Reinforcing the already upbeat anticipated US government policy changes into next year, much of the US economic data has turned more positive on everything from Retail Sales to housing. There is also the seasonal factor during good years in US equities covered in Thursday morning's www.rohr-blog.com *Commentary: 'Santa's Already in Town (redux)*, and we encourage subscribers to review it.

That said, we still feel that until the obvious heavy higher congestion resistance the market is now challenging is violated this remains a range bound market; yet with lower supports likely to hold on reactions.

This is (still) the critical consideration:

By early last Wednesday morning **December S&P 500 future** had shaken off all of the initial Trump victory concerns, on the re-assessment that the Trump policies were actually quite a bit better than the current ones and those proposed by Secretary Clinton. **That allowed the trend to recover not just up to but also above the major 2,105-00 area by the time of the US equities Regular Trading Hours opening on Wednesday morning.**

In fact, by shortly after Wednesday's opening it was well back above the 2,120 level and up into the more prominent 2,141.50 area, ultimately also testing the next resistance into 2,155-60. (It was almost a \$140 rally from last Wednesday's overnight low.)

Already above that as well last Thursday morning, the next higher resistance is the 2,180 area that it is now up vigorously testing for the third time since late last week. It is important to note that this resistance extends up to the late-August 2,191.50 all-time **lead S&P 500 future** trading high. That is also a weekly Oscillator resistance, with the next threshold (i.e. on a new all-time high) not until 2,215-20 (MA-41 plus 125-130.)

All lower resistances are now support areas, even if any 'unbought' bulls are frustrated by the market's recent inability to drop much below 2,160-55.
