**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

**While the US equities bull trend is progressing, it is now a very orderly, incremental affair. After stalling into higher weekly Oscillator resistance last week, it held lower support in spite of the failure major Italian political reform referendum over the weekend.**

**As noted into last weekend, the impact on the much different situation in the US was going to be limited and unlikely to weigh on the US equities up trend. And after taking some overnight pressure initially on Sunday night, the US equities (and even Europe) have been pushing higher since Monday. With the continued improvement in global economic data there is reason to believe this can continue. It is now important to watch the US equities Oscillator resistance that has moved up to and slightly above last week's all-time high (see below.)**

**This is (still) the critical consideration:**

**That the December S&P 500 future pushed into the 2,155-60 range on the Wednesday after the US election (It was almost a \$140 rally from that Wednesday's overnight low) was a telling sign. Already above that as well by that Thursday morning, the next higher resistance was the 2,180 area it also finally overran two weeks ago, including the late-August 2,191.50 all-time lead S&P 500 future trading high. That this occurred on no particularly strong US data or central bank influence is the confirmation of the overall strong psychology noted previous.**

**Due to the recent more aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early year selloff) the extended weekly Oscillator levels now move up roughly \$7 each week. That nearest threshold this week is 2,213-18, the low end of which is consistent with where it stalled last week and again into this morning. The extended thresholds are not until 2,238-43 and ultimately 2,273... also each moving up \$7 each week.**

**As important on any reaction is that all lower resistances are now support areas, including 2,191.50, and more prominent 2,180 congestion (tested in overnight trading Sunday night on the Italian referendum failure), with 2,160-55 below that. On recent form there is also interim congestion support in the 2,200 area.**
