Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

The acceleration of US equities bull trend from the middle of last week was very impressive as it continued into Friday. As noted previous, this is surely a response to the more business friendly incoming Trump administration.

The only concern which might cause a ripple in the otherwise bullish pond is the major FOMC announcements and press conference this afternoon. It might be possible that in addition to the already well-anticipated 25 basis point US base rate hike the Fed will make some reference to the more constructive outlook for the economy to revisit its preference for further rate hikes.

However, the Trump administration policies are yet to be fully set and they are nowhere near being passed into law. That likely means the FOMC statement and Fed Chair communication at the press conference will be more circumspect than hawkish. We shall see.

As of last week's late week US equities rally above multiple Oscillator resistances the real challenge is to monitor how they progress relative to those levels (see below.) As noted again yesterday, the anticipation of Trump administration tax and regulatory reforms seems to open the door to major further upside equities potential. See the latest www.rohr-blog.com post for much more on that.

This is the critical consideration:

The December S&P 500 future push above the 2,180 area also finally overran the late-August 2,191.50 all-time lead S&P 500 future trading high three weeks ago. The pending expiration of the December contract into this Thursday-Friday means it is important to consider the March S&P 500 future against the weekly front month levels, incorporating its \$5.50 discount into those views.

Due to the recent more aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early year selloff) **extended weekly Oscillator levels now move up roughly \$7 each week.** That nearest threshold last week was 2,213-18, the low end of which is consistent with where it stalled two weeks ago and again last Wednesday morning. **So once that was overrun the only surprise in it pushing up to the next threshold at 2,238-43 was how quickly that transpired.**

The Oscillator escalation into this week meant the 2,238-43 threshold shifts up to the 2,245-50 range the December contract Closed above last Friday. As it was above it early this week, it becomes near term lower support as well; including for the March contract as we get into Thursday-Friday. **The extended Oscillator threshold this week has moved up to 2,280, which the December contract virtually tested on Tuesday.** The ultimate resistance is not until 2,305-10 (MA-41 plus 185-190), and they all move up another \$7 into next week.
