Subject: ROHR TREND ALERT!! & HOLIDAY NOTICE

Dear Alert Service Subscriber,
This is a critical short-term view:

Not much has changed since Tuesday's US equities push higher. This has left it well above the weekly Oscillator threshold we have focused on into early this week, yet still short of overrunning key interim resistance (more below.) And we do not expect a lot to change today due to a lack of US economic data. It would be very interesting for the market to make a more important decision on just US Existing Home Sales at 09:00 CST.

That is especially so in the face of so much holiday-accelerated US economic data scheduled for Thursday. That includes the last look at Q3 GDP, Durable Goods Orders and Weekly Employment Claims with only New Home Sales and Final Michigan Confidence (very early due to the school holiday) left on Friday.

As such, the potential further US equities 'melt-up' that might still occur this week will likely need to wait for Thursday's data, unless there is bullish anticipation of that later today. For much more on why that US equities 'melt-up' might occur at all, please see Tuesday's Alert!!

HOLIDAY NOTICE: We will be out on our only annual full holiday from midday Thursday until the markets return from the US and global New Year's Day holiday on Tuesday, January 3rd. While we will be posting an Alert!! on Thursday morning, in case anyone misses that we want to take this opportunity to wish you all Very Happy Holidays and a Very Healthy and Successful New Year.

This is the critical consideration:

Due to the recent more aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early year selloff) extended weekly Oscillator levels now move up roughly \$7 each week. That nearest threshold last week was 2,245-50. As such, it is important that March S&P 500 future held into the upward Oscillator shift this week to 2,252-57 at the end of last week and into early this week.

We must also allow that there is some congestion in the 2,268 area this side of its 2,273 trading high that has stalled the market so far. Yet if it holds, it is likely to overrun that previous high and even the December contract's 2,278.50 front month futures all-time high. That makes a swing up to the 2,287 higher Oscillator resistance likely, and that moves up to 2,294 next week.

Whether or not that happens this week is a bit problematic after Tuesday's stall. Yet even if it should fail 2,252-57, the lower Oscillator threshold is up into the 2,227-32 area this week and 2,234-39 next week.
