**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

Once again not a lot of surprise here. Another year, another first Friday of the month US Employment report. This one was a bit weaker than the early week estimates, yet thoroughly consistent with Thursday's slightly weaker than expected ADP Employment figure.

So the US equities continue to stall up into the higher Oscillator and congestion resistance after holding the end of year downside US equities correction into the area we had suggested would be important near term trend support (see below) prior to Monday's gap higher for the 2017 opening. See Wednesday's Alert!! for more on all that.

And in the context of improving global economic data, it is no surprise that the US and other equities remain strong (including new all-time highs in the UK FTSE-100 Index.) However, even though we believe the equities trend will remain up, we are not inclined to chase rallies in a continuing politico-economic and international trade sensitive environment. There are going to be plenty of opportunities to enter the trend on reactions triggered by events.

**This is (still) the critical consideration:**

**Due to sustained aggressive increases in weekly MA-41** (as it loses old low end Closes from the sharp early 2016 selloff) **March S&P 500 future extended weekly Oscillator levels now move up roughly \$6 each week.** **That nearest threshold that is now support this week is up into the 2,242-37 range** after having already increased into the 2,236-31 range we had previewed as the support for last week prior to heading out on holiday before Christmas. (Apologies for any confusion on those levels being cited with a 2,100 handle earlier this week. We presume active readers understood those levels were in the 2,200s.)

**And in line with our reticence to chase the rally to re-establish bullish positions, the initial higher weekly Oscillator area is up to 2,263-68 the market already tested as of Wednesday.** That is reinforced by hefty mid-December topping congestion, with the March contract trading high and front month continuation high (from the December contract) also respectively up into the **2,273 and 2,278.25 levels.** Those also play loosely into whether DJIA actually manages to surpass 20,000. **This sets up the potential for a short-term downside correction that will likely still leave the overall uptrend intact.**

**As such, those higher levels will need to be violated to signal any meaningful overrunning of the key weekly Oscillator resistance. And that moves right up into the area of those trading highs into next week, with the further extended major Oscillator resistance not until the low 2,300 area. Lower Oscillator support also moves up into the 2,243-48 range into next week, consistent with the heavier March contract congestion since mid-December.**
