Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

It is still a truly contentious US equities market, failing on recent serial tests of higher resistance as expected yet previously unable to provide a selloff into the more significant short-term support. This repetition of the tendencies from the Trump-inspired rally stalling into mid-December yet not selling off into the key support until the end of the year reached its culmination on Thursday's selloff.

However fleeting, the test of the lower support occurred on the temporary pressure which was followed by an immediate rebound. As we had expected, this was in response to Thursday's first full day of Fed-speak in a while, which ends with the hawkish FOMC voting member Harker the only remaining Fed-speak influence right around the time of the US equities opening this morning. Barring any significant impact from that, the US equities bull has passed its next test.

This is (still) the critical consideration:

Due to sustained aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early 2016 selloff) **March S&P 500 future extended weekly Oscillator levels now move up roughly $5 each week. That nearest threshold that is now support this week was up into the 2,248-43 range this week** after having already increased into the 2,236-31 range we had previewed as the support for the last week of 2016 prior to heading out on holiday before Christmas. **That moves up into the 2,253-48 range next week.**

And in line with our reticence to chase the rally to re-establish bullish positions, the initial higher weekly Oscillator area next week is up to the 2,274-79 area the market already tested multiple times since last Friday. That is reinforced by hefty mid-December through early-January topping congestion, with the March contract trading high and front month all-time continuation high (from the December contract) respectively up into the 2,273 and 2,278.25 levels. Those also play loosely into whether DJIA actually manages to surpass 20,000, which it has very narrowly missed doing so far.

This set up the potential for the short-term downside correction that has still left the overall uptrend intact. And those higher levels will need to be violated to signal any meaningful overrunning of the key weekly Oscillator resistance. The further extended major Oscillator resistance not until the low 2,300 area. The top end of the lower 2,248-43 range Oscillator support was barely tested Thursday prior to an immediate rebound, reinforcing the resilience noted above and moving up into the 2,253-48 range next week.
