**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

**And the hits just keep on coming on the the rolling 'Trump Bump.' That includes the steps the new President has already taken via executive order that were accelerated with the friendly moves toward labor unions, oil pipelines and even steel companies regarding the construction of the pipelines. Whether any of this will be good for the US economy in the long run is an imponderable, but the psychology is certainly strengthened at present.**

**This showed up again on Monday in the selloff to lower support respecting the upwardly adjusted weekly Oscillator support into this week (more below.) And our previous room to believe the sometimes erratic nature of Trump pronouncements leave room for a bit more of a downside surprise is being overrun along with the old high. However even with DJIA now nominally above 20,000, the S&P 500 is up against a final hurdle at its new high (more below.)**

**This is (still) the critical consideration:**

**Due to sustained aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early 2016 selloff) March S&P 500 future extended weekly Oscillator levels now move up roughly \$5 each week. That nearest support threshold is up into the 2,258-53 range this week tested and held on Monday.**

**MOST TELLING in line with our reticence to chase the rally to re-establish bullish positions, the initial higher weekly Oscillator area this week is up to the 2,279-84 area this week that it is now testing. That is still a modest buffer above the mid-December through early-January topping congestion, with the March contract trading high and front month all-time continuation high (from the December contract) both into the 2,278.25 level it is now above.**

**So whether it can sustain its rally above the 2,279-84 area for this week's Close will be very interesting and potentially quite bullish after not much of a reaction. If those levels are violated it signals a meaningful overrunning of the key weekly Oscillator resistance, with the further extended major Oscillator resistance not until the 2,315 area this week rising to 2,320 next week.**
