Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

It's a "Roadrunner" US equities market. The the rolling 'Trump Bump' saw more justification on Wednesday morning from the new President's previous executive orders accelerating with the friendly moves toward labor unions, confirmation the Mexican border wall will be constructed, approval of oil pipelines and even steel companies regarding the construction of the pipelines.

And so the analysts and investors who were thinking there could be another good sized correction like the one seen at the end of 2016 (this analyst included) have been left in the dust; just like Wile E. Coyote when the Roadrunner dashed away from him in the old-time cartoons after uttering the classical 'meep-meep' horn sound. For those of you who are too young to remember those, a recent GEICO insurance add resurrects a brief bit of those antics: <http://bit.ly/2jx2hBr>.

So now that the US equities have pushed above the old highs and the slightly higher weekly Oscillator resistance, also classically, that resistance must be considered near-term support. While it might seem a bit elevated, there was a hefty bit of previous topping activity since mid-December that should reinforce the area of those previous highs as support (more on all of that below of course.)

This is the critical consideration:

Due to sustained aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early 2016 selloff) **March S&P 500 future extended weekly Oscillator levels now move up roughly \$5 each week.** That nearest support threshold is up into the 2,258-53 range this week, tested and held on Monday.

MOST TELLING in line with our reticence to chase the rally to re-establish bullish positions, the initial higher weekly Oscillator area this week is up to the 2,279-84 area this week that it has now overrun. It is interesting that this modest buffer above the mid-December through early-January topping congestion at the March contract trading high and front month all-time continuation high (from the December contract) into the 2,278.25 level was fully exceeded. That is the additional reason the area around that old high is now near-term support.

And that meaningful overrunning of the key weekly Oscillator resistance points to a test of the further extended major Oscillator resistance that is not until the 2,315-20 area this week, rising to 2,320-25 next week.
