Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

It's another 'Trump Bump' week ending with more of a whimper than a bang after the impressive additional gains earlier this week. The new President's fresh executive orders accelerating friendly moves toward labor unions, confirming the Mexican border wall will be constructed, and approving oil pipelines and even steel companies regarding the construction of the pipelines were quite a fillip for the US equities into midweek.

And even in spite of the Mexican border wall funding issue causing Mexican President Nieto to cancel his planned visit and this morning's slightly weaker-than-expected first look at US Q4 GDP, the US equities are holding up.

That is important now that they are above the previous highs that should act as near-term support on any setback (i.e. old resistance becomes new support.) While that support might seem a bit elevated, there was a hefty bit of previous topping activity since mid-December that should reinforce the area of those previous highs as support (more on all of that below of course.)

This is (still) the critical consideration:

Due to sustained aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early 2016 selloff) March S&P 500 future extended weekly Oscillator levels now move up roughly \$5 each week. That nearest support threshold is up into the 2,258-53 range this week, tested and held on Monday.

MOST TELLING in line with our reticence to chase the rally to re-establish bullish positions, the initial higher weekly Oscillator area this week is up to the 2,279-84 area that it has now overrun. It is interesting that this modest buffer above the mid-December through early-January topping congestion at the March contract trading high and front month all-time continuation high (from the December contract) into the 2,278.25 level was fully exceeded. That is the additional reason the area around that old high is now near-term support.

And that meaningful overrunning of the key weekly Oscillator resistance points to a test of the further extended major Oscillator resistance that is not until the 2,320-25 area next week.
