Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

Another 'Trump Bump' week ended with more of a whimper than a bang after the impressive additional gains into midweek last week. The new President's fresh executive orders accelerating friendly moves toward labor unions, confirming the Mexican border wall will be constructed, and approving oil pipelines and even steel companies regarding the construction of the pipelines were quite a fillip for the US equities into midweek.

Yet now the antagonistic reaction to his aggressive policy moves on immigration of people from some troubles areas of the world seems to be creating more concern along with the Mexican border wall funding issue causing Mexican President Nieto to cancel his planned visit. There was also last Friday's slightly weaker-than-expected first look at US Q4 GDP.

All of that said, this is just the sort of tangential distraction that causes only short-term weakness in US equities. And it is most interesting that at least so far this is back to the overrun resistance that represents near-term support.

This is the critical consideration:

Due to sustained aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early 2016 selloff) March S&P 500 future extended weekly Oscillator levels now move up roughly \$5 each week. That extended lower support threshold is therefore up into the 2,258-63 range this week if the market should happen to drop that far.

Yet in line with last week's overrunning higher weekly Oscillator resistance in the 2,279-84, it is interesting that was the buffer above the mid-December through early-January topping congestion at the March contract trading high and front month all-time continuation high (from the December contract) into the 2,278.25 level now fully exceeded. That is the additional reason the area around that old high is now near-term support, even if the outright Oscillator area is now up to the 2,289-84 area.

And that meaningful overrunning of the key weekly Oscillator resistance points to a test of the further extended major Oscillator resistance that is not until the 2,320-25 area this week.
