Subject:	ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

New challenges for the Trump administration have spilled over into a recently atypical challenge for the markets. The extensive backlash against Trump's executive order limiting immigration/travel from seven countries deemed to be potential terrorism sources, and Iran challenging him by launching a clearly proscribed ballistic missile (under its nuclear deal) have created less friendly market environment.

Yet the technical trend remains up for now (more below), and we feel these issues may be resolved fairly quickly. The protest against the immigration ban is in part due to the clumsy manner in which it was rolled out. Some further explanations and especially some folks being more aggressively vetted and allowed to enter the US should defuse that fairly soon. The cries of corporate executives that this 90-day ban will ruin their business models seems a bit exaggerated.

While the Iranian move is a bit more troubling, we doubt the Trump administration will react in any overtly hostile manner in the near term. Without a full cabinet in place there is little it can do without looking even more unprepared than the immigration ban rollout. And in these circumstances more can be accomplished initially 'behind the scenes' than any overt action.

This is the critical consideration:

Due to sustained aggressive increases in weekly MA-41 (as it loses old low end Closes from the sharp early 2016 selloff) **March S&P 500 future extended weekly Oscillator levels now move up roughly $5 each week. That extended lower support threshold is therefore up into the 2,258-63 range this week, the top end of which was tested on Monday. Even though that is below the old high (see below), at the low end it is also right into weekly MA-13 support.**

And in line with last week's overrunning higher weekly Oscillator resistance in the 2,279-84 area, it is interesting that was a buffer above the mid-December through early-January topping congestion at the March contract trading high and front month all-time continuation high (from the December contract) **into the 2,278.25 fully exceeded last week. That is the additional reason the area around that old high is now a critical near-term area on any recovery**, even if the outright Oscillator area is now up to the 2,289-84 area into last week's 2,289.00 Close.
