**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

As noted Tuesday morning, new challenges for the Trump administration have spilled over into a recently atypical challenge for the markets. The extensive backlash against Trump's executive order limiting immigration/travel from seven countries deemed to be potential terrorism sources fomented a particularly aggressive backlash. Yet the technical trend remained up (more below.)

And developments are vindicating our view that these issues would be resolved fairly quickly. The protest against the immigration ban is in part due to the clumsy manner in which it was rolled out. And the delay in multiple Trump cabinet nominee approvals that it created has been overcome.

In the context of our long-held view that markets operate in a state of Dynamic Disequilibrium (<http://bit.ly/25GidVh>), equities had to react to the downside once any immediate upside potential diminished. Yet the slippage back below the old all-time high was only into key secondary (and still aggressive) up trend support.

On current form renewed strength in data (especially US ADP Employment and ISM Manufacturing this morning) and Republicans finding a way to get the rest of Trump's cabinet nominees approved are working in favor of the bulls. In other words, the feared return of impossibility of getting anything done in Washington DC that weighed on the equities since the top of this week is abating once again.

**This is the critical consideration:**

Due to sustained aggressive increases in weekly MA-41 (as it loses old lower Closes from early 2016 selloff) **March S&P 500 future extended weekly Oscillator levels now move up roughly \$5 each week.** That extended lower support threshold is therefore up into the 2,258-63 range this week, the top end of which was tested on Monday and Tuesday. Even though that is below the old high (see below), at the low end it is also right into weekly MA-13 support.

And in line with last week's overrunning higher weekly Oscillator resistance in the 2,279-84 area, it is interesting that was a buffer above the mid-December through early-January topping **congestion** at the March contract trading high and front month all-time continuation high (from the December contract) **into the 2,278.25 area was fully exceeded last week. That is the reason the area around that old high is now a critical near-term area on any recovery,** even if the outright Oscillator area is now up to the 2,289-84 area into last week's 2,289.00 Close. **The extended weekly OScillator resistance is not until 2,320-25 this week.**
