**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

The US equities pushing up to another new all-time high is in line with our trend view since the US election and especially since the beginning of the year. Yet the resumption of the more aggressive up trend since last Thursday exceeding the January 26th 2,300 area old high does not make it any easier to simply dive in to assume new positions. The surge to almost \$20 above that old high introduces risk factors once again, even if the next weekly Oscillator projections (see below) point to another \$15(+/-) up before the March S&P 500 future is potentiall over-stretched to the upside once again.

Yet the recent activity along with the lower weekly Oscillator levels natural upward shift (also see below) reinforces the area around that old high as the new short-term support. This is also now assisted by the global economic data turning stronger once again since last Wednesday morning's release of the OECD monthly Composite Leading Indicators (you can access our marked-up version at: <http://bit.ly/2lnMzsC>), along with Thursday's US Wholesale Sales that were very much stronger than expected.

Therefore while we suggest caution is in order after such a significant rally, there is also even more reason to feel that the US equities will hold on setbacks. And there are some reasons to think that a bit of nervousness might develop sooner than not. There is a substantial amount of economic data (including inflation numbers) and Fed-speak Tuesday into Wednesday of this week. And the latter includes two rounds of Congressional testimony by Fed Chair Yellen.

**This is the critical consideration:**

**Due to sustained aggressive increases in weekly MA-41** (as it loses old lower Closes from the early 2016 selloff) March S&P 500 future extended weekly Oscillator levels are still moving up roughly \$5 each week. That extended lower support threshold is therefore up into the 2,268-73 range this week even if there is any weakness back below the 2,300 area.

And in line with overrunning higher weekly Oscillator resistance in the 2,289-94 last week, that rises to 2,294-99 this week. Of course, is also just below the previous January 26th 2,299.50 all-time trading high. And below that is the 2,278.25 area that is the previous all-time trading high (set by the December contract) that was exceeded again two weeks ago. As the market maintained the bid from near that lower support area last week (it just missed hitting it on Wednesday's 2,281 low), the extended weekly Oscillator resistance above 2,300 area is 2,330-35 this week.
