**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

**After last Wednesday morning's euphoric US equities response to President Trump's 'conciliatory' productive discussion of his plans and their potential benefits for the US economy and society, the natural more challenging phase set in from Thursday morning. That is not much of a surprise, as after the very strong 'general' ideas laid out by the suddenly 'very Presidential' Trump, the Republicans are back to bickering over the 'specifics' of the Trump program.**

**The exact nature of the healthcare reforms, budgetary considerations, whether the proposed military buildup is enough and other aspects are back under the magnifying glass. Added to that are the extreme accusations on both sides, the most recent being Trump's tweets on being 'wiretapped' by the Obama administration. Pretty wild... yet ultimately a sideshow, and we suggest remaining focused on the actual trend evolution as the US equities move down into lower aggressive trend support (more below of course.)**

**This is the critical consideration:**

**Due to sustained aggressive increases in weekly MA-41 (as it loses old lower Closes from the early 2016 selloff) March S&P 500 future extended weekly Oscillator levels are back to moving up roughly \$8 each week. Most important at present is the extended weekly Oscillator resistance above the 2,300 area rises to the 2,355-60 range this week. So it will be support again with congestion above it even nearer, around the 2,370 area it has dropped to on the current reaction.**

**As it had previously continued to rally from near-term support, the ultimate Oscillator threshold is up into the 2,385-90 range (weekly MA-41 plus 190-195) this week. It is important to note that this Oscillator threshold was already tested last week, and is the sort of extension has only been seen at extreme extensions like early April 1999 (corrected from last week's specification of 1998.)**

**However, even if it stalls it does not necessarily need to turn bearish. It can evolve into a churning bull with more downside reactions in between new highs, as occurred from 1999 into 2000. So it will be especially interesting to see if it holds the aggressive up trend support noted above.**

**[For those of you who are subscribers, see the latest analysis and Market Observations write-up at [www.rohr-blog.com](http://www.rohr-blog.com) for more on the current trend evolution. Market Observations are available to Gold and Platinum subscribers.]**

**NOTICE: The Rohr International, Inc. research team or its principals may already have entered positions or have orders working based on this view.**
