**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

In spite of bouncing from the lower support suggested in recent Alert!! analyses, the US equities are back under pressure again. There are multiple reasons for this, all of which suggest near term caution is advised even though the markets are back down to the top end of previously noted lower supports (more below.)

This morning has seen the US Republican Congress roll out the draft plan for healthcare reform (i.e. the now well-worn “repeal and replace Obamacare”), and it is not being particularly well-received. That raises concerns about the viability of any rapid evolution of the more critical tax reform agenda, as it has been said that healthcare reform must be clearly articulated prior to tax reform being possible.

Even prior to that this morning there were the German Factory Orders which ‘tanked’ relative to the only modestly weaker estimates. And the very important OECD Interim Economic Outlook was not as upbeat as expected after recent improvements in their monthly Composite Leading Indicators. The full very interesting (if somewhat lengthy at 40 minutes) presentation can be accessed at <http://www.oecd.org/eco/economicoutlook.htm>. Or you can access the PowerPoint presentation alone that we have downloaded and have available for you at <http://bit.ly/2mB7qgr>. The bottom line is that it focused on the policy and financial risks as much as the very much improved sentiment.

**This is (still) the critical consideration:**

Due to sustained aggressive increases in weekly MA-41 (as it loses old lower Closes from the early 2016 selloff) **March S&P 500 future extended weekly Oscillator levels are back to moving up roughly \$8 each week.** Most important at present is the extended weekly Oscillator resistance above the 2,300 area rises to the 2,355-60 range this week. As noted previous, congestion support above begins around the 2,370 area it has already dropped to on the current reaction.

If it does continue to rally from near-term support, the ultimate Oscillator threshold is up into the 2,385-90 range (weekly MA-41 plus 190-195) this week. It is important to note that this distended weekly Oscillator threshold was already tested last week, and is the sort of extension has only been seen at extreme rallies like early April 1999.

However, even if it somehow fails back below the 2,355-60 range, lower congestion supports and Oscillator areas are into the interim 2,350 and 2,320 congestion and the more major 2,300 area.
