**Subject:** ROHR TREND ALERT!!

Dear Alert Service Subscriber,  
**This is a critical short-term view:**

**A bit earlier this morning to update you on our assessment after the US Employment report. Yet first we were surprised that some folks evidently thought ‘Super Mario’ Draghi’s ECB press conference yesterday morning was a bit hawkish, and that might be of some concern for equities. We disagree, and in any event that longer term expectation shift for the ECB was going to be moot into the much better expectations for this morning’s US Employment report.**

**And also in any event, the more telling influence weakening equities is the lack of Republican Party consensus on critical healthcare reforms. As noted previous, healthcare reform must be clearly articulated prior to the far more important budget and tax reform being possible. So the question now is whether the US equities hold up after a very constructive US Employment report now that they are back above a key level (more below.)**

**We also remind Rohr-Blog ([www.rohr-blog.com](http://www.rohr-blog.com)) subscribers about Wednesday’s fresh full “Commentary: OECD versus ADP” post that also delves into the likely constructive impact of the very strong ADP Employment report. That is now confirmed after the US Employment report and was based on its previous major overshoots. There are also very good graphs included with the discussion.**

**This is the critical consideration:**

**Due to sustained aggressive increases in weekly MA-41 (as it loses old lower Closes from the early 2016 selloff) March S&P 500 future extended weekly Oscillator levels are back to moving up roughly \$7 each week. Most important at present is the extended weekly Oscillator resistance above the 2,300 area rose to the 2,355-60 range this week, rising to 2,362-67 next week. As such it is also very important whether this morning’s gains are maintained. Also consistent with its rise into next week, the question became whether it can sustain a more extensive rally above the 2,370 area congestion than the last several sessions’ temporary blips.**

**If it does continue to trend higher from near-term support, the ultimate Oscillator threshold is up into the 2,385-90 range (weekly MA-41 plus 190-195) this week, rising to 2,392-97 next week; also consistent with last week’s 2,401 new front month S&P 500 all-time high. That sort of Oscillator extension has only been seen during extreme rallies like into early April 1999.**

**However, even if it fails back below 2,355-60 range, lower congestion supports and Oscillator areas are into the interim 2,350 and 2,320 congestion and the more major 2,300 area.**
