Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,
This is a critical short-term view:

As noted previous, last Wednesday's Fed Day rally was likely to be a temporary affair in spite of the sharp nature of the near term rally. And the culprit in any renewed weakness was likely to be the full Trump agenda presently under the cloud of stalled healthcare reform. And that came home to roost Tuesday morning with a vengeance, as the US equities already back down to pre-FOMC levels crashed below them and the next nominal support (see below.)

That is a reflection of the importance of the stalled reform agenda, which includes tax reform that is also hung up on the lack of progress on the healthcare reform issues. All of this will also crystallize into a likely 'binary' decision at the critical inflection point of Thursday's planned House vote on the initial phase of the Trump healthcare reforms.

And lest anyone forget, when the US House schedules a still problematic healthcare reform vote for 'Thursday', that means anytime up until midnight Friday morning or even a bit beyond. So no less than on US Employment reports, this is now likely a critical up or down decision into Friday morning even if there are some significant trend supports into still major lower levels (more below.)

This is the critical consideration:

Due to sustained aggressive increases in weekly MA-41 (as it loses old lower Closes from the early 2016 selloff) June S&P 500 future (now front month) extended weekly Oscillator levels are back to moving up roughly \$7 each week. Most important at present is the extended weekly Oscillator resistance above the 2,300 area rises to 2,369-74 this week. That is also consistent with the recent 2,370 area congestion over-under the tested on Monday and significantly violated early Tuesday morning.

However, even as it has failed back below the 2,370 area and interim 2,350 congestion that is now near-term resistance, there are lower congestion and trend channel supports and Oscillator areas are into the 2,320 congestion area and the more major 2,300 area.

And if it somehow resumes the trend higher from lower support, the recent near term congestion remains as nearby as the 2,380-82 area. Yet the major Oscillator threshold is not until the 2,399-2,404 range (weekly MA-41 plus 190-195) this week. That is also consistent with the 2,401 front month S&P 500 all-time high. That sort of Oscillator extension has only been seen during extreme rallies like into early April 1999.
