Subject: ROHR TREND ALERT!!

Dear Alert Service Subscriber,

As noted previous, the US equities were under pressure late last week for reasons related to the Middle East and North Korean situations. The latter remains a current concern, and for more on the MOAB strike in Afghanistan right in front of the Easter holiday weekend see Monday's ALERT!!

Yet as we also noted on Monday, the Trump reform and stimulus agenda is still stalled in Congress while they are out on their extended Easter recess. That makes recent weakening of US economic data also negative for the previously bullish US equities mentality. That was strongly reinforced by the Financial Times interview of Treasury Secretary Mnuchin where he allowed his previous assertion that there would be a tax reform bill on the President's desk prior to Congress' August recess was "highly aggressive to not realistic at this time." And the reason? He notes (as we and others had noted at the time of the healthcare reform failure), "...it is probably delayed a bit due to healthcare."

That is now also reinforced by recent poor data, a good reason the US equities weakened from Wednesday's new high for the current rebound in spite of Tuesday's Trump push on the 'Buy American, Hire American' executive order action and speech. As noted Wednesday morning, US equities were also getting back up into resistance (failed support.)

This is (still) the critical consideration:

Due to sustained aggressive increases in weekly MA-41 June S&P 500 future extended weekly Oscillator levels are moving up roughly \$5 each week. Most important was the extended weekly Oscillator resistance above the 2,300 area rising to 2,369-74 three weeks ago.

After it failed below the 2,370 area and interim 2,350 congestion in mid-March, those were resistance with the lower one being exceeded three weeks ago Tuesday and the market testing the higher level two weeks ago. Yet the slippage back below 2,350 over the past two weeks was beginning to erode that support.

And as we have pointed out since the early March high, even if it were to break further, there is lower congestion, trend support and Oscillator areas into the 2,320 congestion area hit in late March and approached again Monday morning, with more support into the 2,300 area. Yet higher 2,350 area resistance is now reinforced by weekly MA-13 in the 2,342 area this week (both right into recent near term congestion as well.) Reinforcing lower support is a weekly Oscillator threshold just below 2,320, and also in the 2,300 area this week.
