**Subject:** ROHR TREND ALERT!!

**Dear Alert Service Subscriber,**

**Wea Culpa! That's right, 'wea', as we were previously too sanguine on likelihood FBI Director Comey's dismissal and the Trump administration follow-up would lapse into the background on a normal 48-hour news cycle. Our confidence that US equities remained a 'Trump-On' market based on that excluded one factor we could not have anticipated having such a major impact:**

**The Trump administration's penchant for ineptitude. And by that we mean the man at the top. There were indeed good reasons for dismissing Director Comey, and we reviewed the entire background for whole situation in our Wednesday afternoon [www.rohr-blog.com](http://www.rohr-blog.com) post. Yet the manner in which it was handled was significantly deficient on many levels, with the Trump administration raising the art of 'snatching defeat from the jaws of victory' to previously unknown levels. After all, this week's disarray follows last week's nominal House AHCA passage victory, which pointed toward the possibility of some further success. NOT!!**

**We are developing a fresh Rohr-Blog "Commentary: US Politics Broken" for weekend reading, which goes into depth not suitable for an ALERT !! And the reason this political comment is relevant is the likely economic impact of 'The Comey Affair' weighing on the ability of Team Trump to advance their tax reform and infrastructure agenda. That will now need to be through a Congress where even some Republicans are losing faith in the President's leadership. Ergo, the greater circumspection suggested yesterday remains the operative advice.**

**This is (still) the critical consideration:**

**Due to sustained aggressive increases in weekly MA-41, June S&P 500 future extended weekly Oscillator levels are still moving up roughly \$5 each week in spite of the selloff since March 1st. Most important was the extended weekly Oscillator threshold above the 2,300 area rising to 2,369-74 in mid-March.**

**After it failed below the 2,370 area and interim 2,350 congestion in mid-March, those were resistance. Yet 2,370-75 was exceeded again by late April, only testing the top of it several times at the beginning of May leaves it as support now.**

**And while only testing the bottom of 2,390-2,401 congestion over the previous two weeks, it finally pushed up fully into it late last Friday. Yet it now still faces hurdles at the front month futures 2,401 all-time high from March 1<sup>st</sup>, and weekly Oscillator resistance that is up to 2,410-15 this week and 2,415-20 next.**

**And while previous slippage below 2,350 area congestion eroded that as support, it is also worth watching once again. It is now reinforced by the weekly Oscillator, and both weekly MA-9 and MA-13 moving up into the 2,365 area this week.**
