**Subject:** ROHR TREND ALERT!!

**Dear Alert Service Subscriber,**

Even after stalling from the failed attempt to overrun weekly Oscillator resistance highlighted on Monday (more below), the US equities very constructive response to last Thursday's Paris Agreement withdrawal news remains an indication of how bullish they remain overall. They are even holding up after Thursday's significant influences as well.

The ECB remained as accommodative as expected, and Ex-FBI Director Comey's testimony did not contain any market upsetting bombshells. Yet the critical UK Parliamentary elections came out much different than imagined when PM May called them back on April 18<sup>th</sup>. Yet there as well the impact even on UK markets has been nominal, and the US equities seem unconcerned.

So it is back to whether President Trump can restrain himself from the tendency noted in Wednesday evening's [www.rohr-blog.com](http://www.rohr-blog.com) *Commentary: Self-Inflicted Wounds are Back* post. And it was interesting that there was nothing from him during and after Mr. Comey's testimony. Is it possible he will discipline himself to stay out of the way of his important reform agenda? We shall see.

**This is (still) the critical consideration:**

The background remains that due to sustained increases in weekly MA-41, June S&P 500 future extended weekly Oscillator levels are now moving up roughly \$6 each week again in spite of the selloff after March 1st. After it failed below the 2,370 area and interim 2,350 congestion in mid-March, 2,370-75 was exceeded again by late April, which it remained above in early May; and importantly both weekly MA-9 and MA-13 were up into the 2,365-70 area.

While those were temporarily violated on the mid-May selloff, pushing back above them later that same week was a strong sign. Higher resistances around the 2,401 March 1st front month futures high, with a buffer to that same mid-May week's early 2,404.50 next all-time prior to the selloff were exceeded in late May. That range remains the key lower support now.

Once June S&P 500 future Closed above those levels, next Oscillator resistance is up into the 2,435-40 range this week (up to 2,440-45 next week.) That is why there is tension this week after Closing into that range last week. And the ultimate Oscillator resistance (last seen at the early March high) is up to 2,465-70 this week, rising to 2,470-75 next week.
