**Subject:** ROHR TREND ALERT!!

**Dear Alert Service Subscriber,**

**As noted previous, the FOMC only moving federal funds up to 1.00%-1.25% is still 'nominally' accommodative compared to Core US CPI data that dropped back from 1.9% to 1.7% Wednesday morning before the FOMC announcements. See Thursday morning's ALERT!! for a link to the FOMC statement and other items.**

**In that context the Fed action seems a bit hawkish once again. The Fed going back to being hopeful on inflation and growth with serial weak US economic data (housing figures this morning being the latest shoe to fall) seems more hawkish at the wrong time. It has that 'good ole' 2015-2016 feel to it.**

**And along with the US President's unconstructive aggressive tweeting again, that is likely why US equities come back under pressure at times. However, they also seem to snap back up readily on the continued hope the Trump administration reform and stimulus agenda will somehow still get passed into law later this year.**

**As such, as bad as the US equities feel at times on volatile short-term selloffs, that ability to also recover smartly as well means it has been a very orderly (if active) reaction from recent tests of 2,445 weekly Oscillator resistance (more below.) This tends to support the idea they will hold key lower supports.**

**This is (still) the critical consideration:**

**While the interim 2,370-75 area and 2,350 congestion were temporarily violated on the mid-May front month S&P 500 future selloff, pushing back above them later that same week was a strong sign. Higher resistances around the 2,401 March 1st futures high, with a buffer to that same mid-May week's early week 2,404.50 next all-time high prior to the selloff were exceeded in late May.**

**Once June S&P 500 future Closed above those levels, next Oscillator resistance is up to the 2,440-45 range this week and moves up to 2,445-50 next week with September S&P 500 future now front month. And recoveries from below 2,430-25 congestion throughout this week reinforces an 'orderly' correction psychology.**

**So even if it weakens further, the more major support remains the 2,405-00 area violated old all-time highs from back into March 1st and early-mid May. That is now reinforced by weekly MA-9 with weekly MA-13 moving up to slightly below that area into next week.**
