Subject: ROHR Holiday Notice & TREND ALERT!!

Dear Subscribers,

After today we will be out until Tuesday, January 2nd. We wish you all Very Happy Holidays, and All the Best for the New Year.

In the context of needing to be available for all of the international markets we cover, this is on our only real holiday all year. And it is only possible because it is also a time when all of our institutional clients have significantly dialed down risk as well. Regardless of market activity, conditions are typically so thin as to warrant much lower risk profiles.

And to get back to how that plays into the current ALERT!!, anyone who doubted how much the strong US equities seasonal can still be affected by the fortunes of the Trump tax reform effort merely needs to review Thursday's activity. The March S&P 500 future was maintaining its attempt to escape very important weekly Oscillator resistance (more below) until it became apparent that Senator Rubio had some reservations over a key component, which was shared by a few others.

From that point it experienced almost a \$20 drop prior to stabilizing. It has also recovered most of it on this morning's news of some changes have been made which should return him to voting 'yes'. And that sort of erratic activity is another good reason major traders are dialing down risk. That volatility will continue to be the case into at least next Friday's deadline for a US continuing budget resolution to defer major decisions into early 2018. All other central bank and economic indications analysis remains very much the same as Thursday's ALERT!!

This is the critical consideration:

March S&P 500 future is now 'front month' after the December contract expiration into this morning. The old front month (December) overran the 2,525-30 range weekly Oscillator threshold (MA-41 plus 130-135) into early October. As a clear sign of strong momentum, that rises to 2,605-10 next week.

The next Oscillator resistance rose to 2,615-20 two weeks ago. And in spite of the elevated overall equities prices, the top end of that range held very well on the subsequent pullbacks. It rises to 2,635-40 next week.

As noted previous, the old all-time high (1999 & March 2017) major extended Oscillator resistance is another \$30 higher, which equates to 2,658-63 this week and rises to 2,665-70 next week. The higher end of it is the area we noted it was trying to escape into Thursday morning, and it will remain the key area next week.

If it is overrun, the next interim Oscillator level is 2,685 next week. And the next major Oscillator threshold is not until 2,705-10 next week. Those are 'adjusted' Oscillator levels, beyond any historic levels from 1999 and earlier this year.
