Subject: ROHR Holiday Reminder & Final 2017 TREND ALERT!! Forward View

Dear Subscribers,

We wish you all Very Happy Holidays, and All the Best for the New Year.

We are out on our annual end of year two-week holiday, returning to the office on Tuesday, January 2nd. Our only real holiday all year is only possible because it is also a time when all of our institutional clients have significantly dialed down risk as well. Regardless of market activity, conditions are typically so thin as to warrant lower risk profiles.

And to get back to how that plays into the last ALERT!! from Friday, it is all about the Trump tax reform effort, and we also suggest a review of Thursday's activity in Friday's ALERT!! The March S&P 500 future was maintaining its attempt to escape very important weekly Oscillator resistance (more below) until Senator Rubio and others expressed reservations over a key tax reform component.

From that point it experienced almost a \$20 drop prior to stabilizing. It has also recovered most of it by Friday morning prior to going on to establish another new all-time high on the address of that issue. And that sort of erratic activity is a good reason major traders are dialing down risk. That volatility and upside surge will very possibly continue as long as the tax bill is passed and this Friday's deadline for a US continuing budget resolution is met.

We have adjusted the critical consideration below to accommodate the key 'adjusted' projections through this week into next week.

This is the critical consideration:

March S&P 500 future is now 'front month' after the December contract expiration last Thursday into Friday. The next lower Oscillator threshold rose to 2,635-40 this week and will rise to 2,642-47 next week.

As noted previous, the old all-time high (1999 & March 2017) major extended Oscillator resistance is another \$30 higher, which rose to 2,665-70 this week. And as it finished well above it last week, we are now employing our 'adjusted' Oscillator levels, beyond any historic levels from 1999 and earlier this year.

While the next interim Oscillator level is 2,685 this week, as it is already above it it is necessary to look at 'adjusted' higher Oscillator thresholds. That is 2,705-10 this week, rising to 2,712-17 next week. Under the circumstances (a euphoric bullish psychology based on tax reform) it is reasonable to consider the next higher 'adjusted' Oscillator threshold, which is 2,755-60 this week, rising to 2,762-67 next week. The further extended levels are not until 2,810-15 this week, rising to 2,817-22 next week. While that may all sound incredible, consider that the front month S&P 500 future only crossed above 2,600 on November 24th.

For anyone who still wants to trade the S&P 500 future under these conditions, we hope you find this helpful.
