Subject: ROHR TREND ALERT!!

Dear Subscribers,

Frankly, we do not have anything new to say after Monday's ALERT!! highlighted the degree to which US equities are able to shake off their own less than strong economic data due to stronger international news and data and still seemingly accommodative FOMC minutes last Wednesday. And it was more of the same this morning, as US NFIB Small Business Optimism came in weaker than expected and even well-down on last month's reading. Yet stronger Asian and European data seems to be fully offsetting that.

For more on the overall background, please refer back to Monday's ALERT!! And note that the very limited nature of the pullback on Monday still leaves a technical trend picture that allows for a further upside surge, even from these lofty levels (more on that below.)

This is (still) the critical consideration:

March S&P 500 future saw the lower Oscillator threshold rise to 2,644-49 last week, and it is up to 2,662-67 this week. That now represents lower interim support. As noted previous, the old all-time high (1999 & March 2017) major extended Oscillator resistance was another \$30 higher. That rose to 2,682-87 last week, which made it the near term resistance from which the market escaped at the beginning of last week. It rises to 2,692-97 this week, which also conforms to the latest congestion area from the temporary holiday period stallout prior.

Once it escaped that range we began employing our 'adjusted' Oscillator levels, beyond historic levels from April 1999 and the rally into early March 2017. The next higher 'adjusted' interim Oscillator threshold last week on that basis was 2,702, which rises to 2,712 this week. The more substantial threshold was not until the 2,722-27 range the market also overran last week, rising to 2,732-37 this week. Critically, there is not much above that until 2,782-92, setting up a potential runaway if it holds up at no worse than 2,732-37 on any near-term setback, as it has so far this week.
