Subject: ROHR ALERT!! NOTE: Calm Before the Storm

Dear Subscribers,

We are sending a simple note today because not much has changed from yesterday's more extensive assessment in the wake of the US-Canada trade agreement that brings a consolidated North America back together as a trading block. This was an especially pleasant surprise for the equities after they slipped on a Trump banana peel last Wednesday afternoon due to his antagonistic trade comments directed at Canada.

Yet even at that we noted US equities that were back up well above the previous all-time high they have slipped to test this morning (more below) were only up to the next higher Oscillator resistance (also more below) they ultimately failed to escape on Monday.

Please see Monday's ALERT!! for much more on our consistent strong focus on the US-Canada negotiations as critical to an updated NAFTA agreement. That fosters a greater likelihood a consolidated West (including the EU, Japan and others) will be able to challenge China's predatory trade practices.

The confirmation of this stance was delivered last Wednesday in the form of the US-EU-Japan statement on the matter (<http://bit.ly/2P0TmI5>.) Please see last week's ALERT!!s for more on other constructive economic indications from the OECD and elsewhere prior to more major economic data for the rest of the week. That may well be more decisive for US equities and other asset classes.

Courtesy repeat of Monday's critical consideration

Front month S&P 500 future still had higher resistance into the 2,840-50 area in early August. It was reinstated on the mid-August drop back below it. Yet not for long, even if subsequent initial recoveries stalled into the low end of that range. However, it was exceeded once again on the mid-August surge.

Higher resistance at the 2,878.50 January all-time high was exceeded in late August, and has held on subsequent selloffs. Next weekly Oscillator resistance into 2,895-2,900 was also overrun. Slipping below 2,895-2,900 congestion left it near-term resistance the September contract pushed above in mid-September.

And the 5.00 premium December S&P 500 future looked that much better after September contract expiration. Higher resistance at the recent front month 2,917.50 high was exceeded, yet was dropped below again on the US-Canada trade concerns last Wednesday. It was reinforced by Oscillator resistance that rises to 2,930-35 this week: hence our concern a bit more upside confirmation is needed even if 2,917.50 should be near-term support. 2,960-65 is next classical Oscillator resistance this week. If that is exceeded, the 'extended' Oscillator levels are interim 2,980 and the more major 3,000-05 (see www.Rohr-Blog.com Rohr ALERT!! sidebar link for the extended Oscillator thresholds table.)
