Subject: ROHR-BLOG: Brexit Bust or Not? Quick Take, Calendar

[View this email in your browser](#)

Dear Subscribers,

Apparently NOT! Have you ever seen something so bad it was good? That appears to be the case for the UK Parliament's massive rejection of PM May's Brexit deal. The 202 AYEs versus 432 NOs defeat was the worst ever, surpassing even major UK bill defeats in the 1920's. However, rather than the very negative market responses we (among others) had anticipated, evidently prevailing psychology is that the EU must at least allow the UK more time to sort out how to manage a 'no-deal' exit.

And the further psychology is that the total failure is a wakeup call to the EU on the lack of any chance (even under the unlikely scenario of an election that sees Labour come to power) the UK is going to accept anything similar to the lopsided arrangement it had foisted onto Ms. May. Just a minor part of the threat to UK-EU trade is noted in a recent FT article on customs delays (<http://bit.ly/2VROVmV>.)

That doesn't even touch major concerns in other areas. The first indication of both UK and EU flexibility will come next week, when UK Eurosceptic MPs will try to force Ms. May to apply for an extension of the March 29 Brexit deadline.

Meanwhile back at the (US) ranch, the ongoing US government shutdown is into its fourth week with no end in sight. More prominent observers, like

JPMorgan's Jamie Dimon and others, are pointing out how this might weaken US growth if it drags on much longer. And as noted since its Monday release, that exacerbates weakness already apparent in this month's OECD Composite Leading Indicators (CLI - <http://bit.ly/2FxK0BV> for our marked-up version.) Also see Monday's emailed research note for our views on the extended implications of the US government shutdown that are now worsening, and becoming more untenable.

That said, the US EQUITIES are holding up above some key congestion while not violating the more critical higher trend resistance. This strength in EQUITIES is weighing on the previously buoyant GOVVIES for now, and also assisting the US DOLLAR INDEX (more on all that below.)

Courtesy Repeat of Monday's Quick Take

Ever since the FRONT MONTH S&P 500 FUTURE dropped below the early 2018 lows into mid-December, we skipped a lot of our previous higher level activity discussion. Suffice to say that ever since the early December (post-G20 Trump 'Tariff Man' tweets) sharp slide back below 2,708 it was in a 'failure swing' noted since then. That quickly led to the violation of the 2,675-70 area (including the 2017 Close.)

The drop below early-2018 2,529-52 lows was critical due to next significant lower support not being until the major 2,400-low 2,300 area, with a Tolerance to the early 2017 2,318 congestion area low. This can still be seen on the monthly chart (<http://bit.ly/2VBvb6D>) from the end of last year. Those areas form the bounds of a broad range, which the market has pushed above since last week Tuesday.

While it must be noted that only a failure back below the 2,529 February 2018 low will restore near-term bearish momentum, there is substantial interim congestion (October-November basing attempt and previous) in the 2,600 area. That extends to approximately 2,635, and includes weekly MA-9 and MA-13. As such, it appears that the relevant trading range has ratcheted up, yet without any overall positive trend reversal unless that resistance is overcome.

Consistently weak data along with previous sharp EQUITIES weakness had also encouraged GOVVIES to predictably push up again. That recently also

exhibited the volatility which seemed to be missing on the previous US EQUITIES selloffs, even if the recent US EQUITIES surge and strong data has weighed on GOVVIES again to a limited degree.

Combining the remaining Brexit concerns and weaker global data had seen strong sister DECEMBER BUND FUTURE back above the 160.00-.30 area as well as the upper-160.00 area highs on its way to the 162.00-.50 area next resistance. On its Thursday DEC 6 expiration the MARCH BUND FUTURE was trading at a recently unusual 0.85 premium to December contract, and was already above 162.00-.50 area. While it stalled temporarily into more major resistance in the 164.00-.50 area during the holidays, recent weak economic data and EQUITIES stalling into resistance have pushed it back above that range after holding only marginally back below it.

And weak sister DECEMBER T-NOTE FUTURE well back above its 118-10 mid-May trading low also sustained its rally above higher trend resistance in the 119-00/-08 area. That pointed to the heftier 120-00 area congestion (also weekly MA-41) it is also pushed above in early December. That left the 120-24 area highs and previous trading highs into 121-12 area as next resistances it also exceeded on its way to a temporary push above next resistance in the 123-00 area prior to recently dropping only somewhat back below 122-00. It is now pushing back above that threshold as well.

The same was true for DECEMBER GILT FUTURE above 122.00-.50, with next heavy congestion into the 124.00-.50 range it stalled into. That said, the MARCH GILT FUTURE was trading at roughly a 0.60 discount into the late-month December contract expiration. And last week's push back up into the 124.00-.50 range has now reversed to some degree, even if not back into the 122.00-.50 range as yet.

Similarly in FOREIGN EXCHANGE, a 'haven' bid that had returned to the US DOLLAR INDEX on the previous US EQUITIES drop has not been in evidence of late. As noted above, its typical crisis phase 'haven' bid can be the opposite if the US is the source of market stress.

Even as the US DOLLAR INDEX reacts once again from near its mid-upper 97.00 resistance, it was holding no worse than the mid-96.00 area seen on previous recent dips. Yet the more major support remains into

95.50-.00 area it is finally testing at present, with additional major recent and historic congestion support into the 94.00 area.

Along with that EUR/USD that had surged back above 1.1400 to near the 1.1500 resistance in thin New Year's Day trading was back marginally below 1.1400 once again. Next support into 1.1250-00 was neared on the recent dip, yet with it well back above 1.1400 at present and even temporarily the 1.1500 area on recent US DOLLAR weakness. Yet more prominent resistance remains into 1.1600 area.

And the Brexit concerns that had dropped GBP/USD well below 1.28-1.30 toward next major support in the 1.25-1.24 area remain in place. As such, GBP/USD could not even breach 1.28 on its previous recent rally, and only pushed above it on Friday due to a bit more positive Brexit outlook. Yet with that key Parliamentary vote scheduled for Tuesday, this remains very fraught.

And despite the US changeability, the previous hint of US-China rapprochement encouraged AUD/USD to squeeze back above its historic .7200-50 area (also weekly MA-9 & MA-13.) However, that same negative early-December Trump 'Tariffs Man' tweet that hit US EQUITIES on the lower chances for US-China trade rapprochement also dropped AUD/USD back from a hopeful test of the .7300-50 area to back below .7200-50. It was recently down into more major .7000 area congestion, with the .6825 nearly 9-year trading low below that. This was not a surprise on the current Chinese economic weakness and fraught US-China relations, even if the current potential rapprochement has it recovering well back above .7000 toward .7200-50.

And while the EMERGING CURRENCIES are still more country-specific trends than previous, they were also enjoying a bounce from support on US-China potential rapprochement that remains a key influence, and the self-inflicted wounds of the US DOLLAR.

The government change-beleaguered MEXICAN PESO that had seen USD/MXN drop back temporarily below its 20.00-20.20 congestion, had been back up on multiple tests of the 20.50 area prior to sliding back below 20.00 again. It is also now below lower interim support at 19.70 as well as more major 19.60-.50 congestion. Next lower supports are in a range of

congestion from 19.20 (high end) to interim 18.70 and ultimately 18.50-.40 (low end.)

And that is just part of the EMERGING CURRENCY return from weakness. as USD/ZAR had pushed up from below 14.00 to testing and failing from 14.50 again on its way back below 14.00 in November. Next lower support in the 13.60-.50 area was probed into the beginning of December prior to pushing temporarily back up into 14.40-.50 area and even 14.60 into the holidays prior to dropping back below 14.00 into the beginning of January. Those areas remain current resistance and support.

USD/RUB that had reacted back down from above 67.00 was back there again in the wake of imploding Crude Oil prices with next resistance as nearby as the 68.00 area. Even though the previous early December Fed shift had engendered slippage back below 67.00 there as well the encouragement both it and the OPEC situation had provided, the subsequent suffering of the Crude Oil market had USD/RUB back above 68.00, even if it failed once again at the 70.00 area resistance (just like early September.) It has recently been back below both 68.00 and 67.00 (including weekly MA-9 & MA-13) with support back into 65.00 (including weekly MA-41.) So basically back into the more sustained 3-month trading range areas.

In the meantime, the still improved TURKISH LIRA had USD/TRY slipping once again from 5.50, even if it experienced an intraday spike above it on January 3rd. And on the previous weakness it refused to drop to next support into the 5.00 area, with weekly MA-41 now up into the recent 5.20 area congestion as well. Outside of that recent temporary spike higher, the last two months have still been mostly a trading range affair between 5.45 and 5.22 until the recent US-Turkey Syria disagreement put it back up for a more sustained test of 5.50 once again. If it should sustain activity above it, next minor resistance is the recent 5.6230 spike high, yet with not much above that until the 5.90-6.00 range.

While more so than ever obviously less relevant (as we have been noting for some time) on the standard report releases in the midst of more major global trade and political cross currents, this week's Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is

available via the www.rohr-blog.com sidebar.

Yet the market response shows how the economic data can still be influential in the form of the much weaker than expected Chinese trade data this morning. And it is going to be another very volatile week based on what we already know is coming outside of the normal economic data releases and central bank influences. We still suggest an extensive review for these ‘macro’ factors, especially that UK Brexit vote on Tuesday.
