Subject: ROHR-BLOG: Short-Term Bank Boom and Bust, Quick Take, Calendar

View this email in your browser

Dear Subscribers,

The short-term tone of the US EQUITIES seems to have been heavily influenced by the vagaries of important US bank earnings. As those have been heavily impacted by bad trading results for some in the tumultuous fourth quarter, we suspect near term agony and ecstasy will pass as markets return to more normal activity.

Once this lapses the US government shutdown's impact on its economy and the global outlook is likely to return to the more important influence. That is even after the massive Tuesday evening UK Parliament vote failure of PM May's Brexit bill (only 202 AYEs versus 432 NOs.) As noted Wednesday morning, this was such a 'bad' failure that it has brought a perversely 'good' response. That has weighed on the GOVVIES and assisted the US DOLLAR in the short run.

After the psychology that the EU must at least allow the UK more time to sort out how to manage a 'no-deal' exit, there is the further implication that the total failure is a wakeup call to the EU on the lack of any chance the UK is going to accept the lopsided arrangement it had foisted on Ms. May. Just a bit of the threat to UK-EU trade is noted in a recent FT customs delays article (http://bit.ly/2VROVmV.)

Meanwhile back in the US, the ongoing US government shutdown is into its

fourth week with no end in sight. Even the Trump administration is now allowing the economic impact is greater than it initially expected (as they didn't include the loss to outside government contractors!?) As noted since its Monday release, that exacerbates weakness already apparent in this month's OECD Composite Leading Indicators (CLI - http://bit.ly/2FxK0BV for our marked-up version.) Also see Monday's emailed research note for our views on the extended implications of the US government shutdown that are now worsening, and becoming more untenable.

This is the critical consideration

Ever since the FRONT MONTH S&P 500 FUTURE dropped below the early 2018 lows into mid-December, we skipped a lot of our previous higher level activity discussion. Suffice to say that ever since the early December (post-G20 Trump 'Tariff Man' tweets) sharp slide back below 2,708 it was in a 'failure swing' noted since then. That quickly led to the violation of the 2,675-70 area (including the 2017 Close.)

The drop below early-2018 2,529-52 lows was critical due to next significant lower support not being until the major 2,400-low 2,300 area, with a Tolerance to the early 2017 2,318 congestion area low. This can still be seen on the monthly chart (http://bit.ly/2VBvb6D) from the end of last year. Those areas form the bounds of a broad range, which the market has pushed above since last week Tuesday.

While it must be noted that only a failure back below the 2,529 February 2018 low will restore near-term bearish momentum, there is substantial interim congestion (October-November basing attempt and previous) in the 2,600 area. That extends to approximately 2,635, and includes weekly MA-9 and MA-13. As such, it appears that the relevant trading range has ratcheted up, yet without any overall positive trend reversal unless that resistance is overcome.

Consistently weak data along with previous sharp EQUITIES weakness had also encouraged GOVVIES to predictably push up again. That recently also exhibited the volatility which seemed to be missing on the previous US EQUITIES selloffs, even if the recent US EQUITIES surge and strong data has weighed on GOVVIES again to a limited degree.

Combining the remaining Brexit concerns and weaker global data had seen strong sister DECEMBER BUND FUTURE back above the 160.00.-30 area as well as the upper-160.00 area highs on its way to the 162.00-.50 area next resistance. On its Thursday DEC 6 expiration the MARCH BUND FUTURE was trading at a recently unusual 0.85 premium to December contract, and was already above 162.00-.50 area. While it stalled temporarily into more major resistance in the 164.00-.50 area during the holidays, recent weak economic data and EQUITIES stalling into resistance have pushed it back above that range after holding only marginally back below it.

And weak sister DECEMBER T-NOTE FUTURE well back above its 118-10 mid-May trading low also sustained its rally above higher trend resistance in the 119-00/-08 area. That pointed to the heftier 120-00 area congestion (also weekly MA-41) it is also pushed above in early December. That left the 120-24 area highs and previous trading highs into 121-12 area as next resistances it also exceeded on its way to a temporary push above next resistance in the 123-00 area prior to recently dropping only somewhat back below 122-00 at present.

The same was true for DECEMBER GILT FUTURE above 122.00-.50, with next heavy congestion into the 124.00-.50 range it stalled into. That said, the MARCH GILT FUTURE was trading at roughly a 0.60 discount into the late-month December contract expiration. After the top of the year push back up into the 124.00-.50 range, it has now reversed to some degree to retest the top of the 122.00-.50 range.

Similarly in FOREIGN EXCHANGE, a 'haven' bid that had returned to the US DOLLAR INDEX on the previous US EQUITIES drop has not been in evidence of late. As noted above, its typical crisis phase 'haven' bid can be the opposite if the US is the source of market stress.

Even as the US DOLLAR INDEX reacts once again from near its mid-upper 97.00 resistance, it was holding no worse than the mid-96.00 area seen on previous recent dips. Yet the more major support remains into 95.50-.00 area it finally tested last week prior to the present rebound into the low-96.00 area. The additional major recent and historic congestion support remains into the 94.00 area.

Along with that EUR/USD that had surged back above 1.1400 to near the 1.1500 resistance in thin New Year's Day trading was back marginally below 1.1400 once again early this month. Next support into 1.1250-00 was again neared on the recent dip. While well back above 1.1400 last week and even temporarily above the 1.1500 area on recent US DOLLAR weakness, it has now dropped back into the 1.1400 area. More prominent resistance remains into 1.1600 area.

And the Brexit concerns that had dropped GBP/USD well below 1.28-1.30 toward next major support in the 1.25-1.24 area remain in place. And the 'bad-good' response to the Brexit bill failure (see above) has seen GBP/USD sustain activity well back above 1.2800. Already back above weekly MA-9 & MA-13 in the mid-1.2700 area, the question now is whether it can also surmount 1.3000 congestion well enough to also push above the 1.31 area weekly MA-41?

And despite the US changeability, the previous hint of US-China rapprochement encouraged AUD/USD to squeeze back above its historic .7200-50 area (also weekly MA-9 & MA-13.) However, that same negative early-December Trump 'Tariffs Man' tweet that hit US EQUITIES on the lower chances for US-China trade rapprochement also dropped AUD/USD back from a hopeful early-December test of the .7300-50 area to back below .7200-50. It was recently down into more major .7000 area congestion, with the .6825 nearly 9-year trading low below that. This was not a surprise on current Chinese economic weakness and fraught US-China relations, even if the current potential rapprochement had it recovering toward another test of .7200-50.

And while the EMERGING CURRENCIES are still more country-specific trends than previous, they were also enjoying a bounce from support on US-China potential rapprochement that remains a key influence, and the self-inflicted wounds of the US DOLLAR.

The government change-beleaguered MEXICAN PESO that had seen USD/MXN drop back temporarily below its 20.00-20.20 congestion, had been back up on multiple tests of the 20.50 area prior to sliding back below 20.00 again. It is also now below lower interim support at 19.70 as well as more major 19.60-.50 congestion. Next lower supports are in a range of congestion from 19.20 (high end) it is currently below to interim 18.70 and

ultimately 18.50-.40 (low end.)

And that is just part of the EMERGING CURRENCY return from weakness, as USD/ZAR had pushed up from below 14.00 to testing and failing from 14.50 again on its way back below 14.00 in November. Next lower support in the 13.60-.50 area was probed into the beginning of December prior to pushing temporarily back up into 14.40-.50 area and even 14.60 into the holidays prior to dropping back below 14.00 into the beginning of January. Those areas remain current resistance and support.

USD/RUB that had reacted back down from above 67.00 was back there again in the wake of imploding Crude Oil prices with next resistance as nearby as the 68.00 area. Even though the previous early December Fed shift had engendered slippage back below 67.00 there as well the encouragement both it and the OPEC situation had provided, the subsequent suffering of the Crude Oil market had USD/RUB back above 68.00, even if it failed once again at the 70.00 area resistance (just like early September.) It has recently been back below both 68.00 and 67.00 (including weekly MA-9 & MA-13) with support back into 65.00 (including weekly MA-41.) So basically back into the more sustained 3-month trading range areas.

In the meantime, the still improved TURKISH LIRA had USD/TRY slipping once again from 5.50, even if it experienced an intraday spike above it on January 3rd. And on the previous weakness it refused to drop to next support into the 5.00 area, with weekly MA-41 now up into the recent 5.20 area congestion as well. Outside of that recent temporary spike higher, the last two months have still been mostly a trading range affair between 5.45 and 5.22 until the recent US-Turkey Syria disagreement put it back up for a more sustained test of 5.50 once again. If it should sustain activity above it, next minor resistance is the recent 5.6230 spike high, yet with not much above that until the 5.90-6.00 range. However, the US-Turkey dispute over the US military's Syria withdrawal seems to have died down, and US DOLLAR strength along with it.

While more so than ever obviously less relevant (as we have been noting for some time) on the standard report releases in the midst of more major global trade and political cross currents, this week's Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is

available via the www.rohr-blog.com sidebar.

Yet the market response shows how the economic data can still be influential in the form of the much weaker than expected Chinese trade data Monday morning and US bank earnings noted above. While there is a G20 ministers meeting at present, little is expected from that. Please also note that all US markets are closed Monday for the Martin Luther King, Jr. Day memorial.
