Dear Subscribers,

Just as with Tuesday's 'Nothing New to Add' research note, this morning we again see no major change in our assessment from Monday's 'The Big Anomaly'. Once again we have the strength of US EQUITIES to near the key resistance set up on last week's downside reversal; that is even after Tuesday's intraday selloff.

Yet that is once again in the face of the further strength of the GLOBAL GOVVIES on continued weak international economic data. That is now true almost across-the-board in the US as well.

We will see more on Friday's major end-of-month releases. This very unusual EQUITIES vs. GOVVIES anomaly seems the proverbial 'irresistible force vs. immovable object'.

And concerns about global weakness are once again weighing to varying degrees on OTHER KEY CURRENCIES against the US DOLLAR; especially the EURO. Even the TURKISH LIRA short-term upward spike is alleged to be due to domestic banks supporting the currency in front of Sunday's key municipal elections.

We are also coming to you much earlier than usual due to the importance of

the key trend anomalies which need to be reviewed by any who have not done so already. With that we once again provide you a repeat of Monday's assessment, which includes some key chart links and observations on all asset classes:

Friday's 'Back to Curious?' emailed research note explored the anomaly of US EQUITIES strength in the face of a weakening global economic consensus (see Thursday's 'Central Bank Harmony Choir'.) Yet Friday's extensive weak economic data finally brought the buoyant US EQUITIES under pressure (joining their international peers.)

Especially regarding the DOWN signal established last week (more below), this seemed to put things back in line... or did it?

The fact is that despite the end of week capitulation apparent on the weekly chart updated through last Friday's Close (<http://bit.ly/2UeXElf>), the FRONT MONTH S&P 500 FUTURE remains elevated not just in comparison to OTHER GLOBAL EQUITIES. It is also seemingly not in touch with trends in other asset classes... at least not yet, remaining near the top of the October-early December range.

Yet in the wake of the much weaker economic outlook from the Fed, JUNE T-NOTE FUTURE has seen a 'front month' push to a new 14-month trading high. While major resistance is as nearby as the 125-08/126-00 area (<http://bit.ly/2HDIP6Q> at Friday's Close), overall strength (i.e. lower long-term rates) is inconsistent with sustained strength of US EQUITIES. And US GOVVIES are weak sister compared to BUNDS and GILTS that are reflections of weaker economies feeding the economic concerns.

The other area showing weakness inconsistent with US EQUITIES strength is the EMERGING CURRENCIES. While a bit far removed from regular review of US EQUITIES, they are also a fair bellwether of global economic tendencies. Even allowing that weak sister TURKISH LIRA has domestic drivers as well for its weakness, USD/TRY has pushed up into new 4-month highs (<http://bit.ly/2HNfvc8> as of Friday's Close.) That is out of a base

which speaks of it continuing to higher levels (i.e. lower valuations for the LIRA.) This reinforces the prospect of further **EMERGING CURRENCY** and global economic weakness, which will likely even further affect **US EQUITIES**.

Market Quick Take

The **FRONT MONTH S&P 500 FUTURE** pre-December activity above the early 2018 lows became relevant again after **MARCH S&P 500 FUTURE** crossed back above 2,600-35 congestion in mid-January. The importance of the January weekly down channel **UP Break (2,600)** also exceeding key moving averages is apparent on the weekly continuation chart (<http://bit.ly/2UeXElf> updated through last Friday's Close.)

That 2,635-00 area remains major lower support, with interim 2,750-40 (including weekly **MA-41**) the market had rallied sharply from after the last weak **US NFP** selloff, the light 2,708 **Negated DOWN Break** area and 2,675-70 area along the way.

The **JUNE S&P 500 FUTURE** Close two weeks ago above the 2,825 bounce during the October selloff was a new 5-month high. Yet that being a mere \$5 above 2,825 seemed a problematic. After last week's wild swings the key now is the weekly **DOWN Closing Price Reversal** from that 2,830 Close (Tolerance 2,836.50) that seems to signal an end to the major post-Christmas rally. Unless it can now sustain activity above that area, more weakness is likely; possibly even back to the low end of October-early December range, more so back in line with other asset classes.

Consistently weak international data recently reinforced by all of the central banks' perspective is consistent with weak serial **OECD** indications on a weaker global outlook. This has encouraged **GOVVIES** to push up again after their previous orderly pullback.

While the **MARCH BUND FUTURE** stalled temporarily into more major resistance in the 164.00-.50 area during the holidays, previous weak economic data and **EQUITIES** stalling into resistance had pushed it back above that range after holding only marginally back below it. Sustained

recent activity above it saw it was also temporarily above the 166.00-.50 major congestion prior to reacting back down.

And any immediate further upside progress above that area on the continuation chart picture was unlikely due to the major 2.50 discount in the June contract as it headed toward the March contract's typical early month expiration. While JUNE BUND FUTURE had been well back below the 164.00-.50 area, glancing the top of the 162.50-.00 range at the end of February, more weak data and the ECB perspective put it right back up into the 164.00-.50 area.

That left the burden of proof back on the bears to keep it weak below there on the recent selloff, or possibly suffer the next surge up into the 166.00-.50 major congestion. Now back out above 164.00-.50 opens the door to that possibility. This is classic BUND bull trend rollover trend activity, and the extended resistance is not until the 168.00 area from mid-2016.

The MARCH T-NOTE FUTURE took over as front month in mid-December, quickly exceeding its 120-24 area highs and previous trading highs into 121-12 area next resistances. That was on the way to a temporary early-January push above next resistance in the 123-00 area prior to dropping only somewhat back below 122-00.

And after holding around 121-12 again, it was back above 122-00 after the previous Fed influence until the very strong February US Employment report. While back in the 122-00 area in the wake of weak economic data, it was back near 121-12 prior to the current rally. Weaker global data, and the central bank harmony on that factor, has it overrunning higher interim 123-00/-08 area resistance tested in early January. The more prominent 124-00/-06 historic congestion remains the key area this side of the extended 125-08/126-00 area trend resistance (<http://bit.ly/2HDIP6Q> at last Friday's Close.)

The same was true for the MARCH GILT FUTURE above 122.00-.50, with next heavy congestion into the 124.00-.50 range it stalled into in the wake of the December contract expiration. After the top of the year push back into the 124.00-.50 range, it reversed to some degree to retest the 122.00-.50

range prior to moving back up into 124.00-.50 range prior to the early March reaction back down toward 122.00-.50.

Yet in the wake of more Brexit stress and the general global weakness, it has recently finally pushed above 124.00-.50. Yet that is the least of it, as the atypical significant premium (full 3.00) in the JUNE GILT FUTURE prior to next Wednesday's March contract expiration is a major bullish sign.

This is obviously a Brexit premium anticipating continued economic weakness. It might weaken if a deal is finally agreed despite the highly contentious nature of the current negotiations. Yet JUNE GILT FUTURE pushing above the 127.00-.50 next resistance opened the door to a test of higher resistances in the 129.00 and 130.00 areas, with the 132.00-.60 range above that .

Similarly in FOREIGN EXCHANGE, after the previous selloff a 'haven' bid returned to the US DOLLAR INDEX, just like on the previous US EQUITIES rally. While an easier Fed stance has reinforced weakness in the greenback, recent global concerns left it holding into the middle of its recent overall range.

Even after the US DOLLAR INDEX reacted once again from its mid-December rally near mid-upper 97.00 resistance, it was holding no worse than the mid-96.00 area in December. Yet the more major support remains into 95.50-.00 area (including weekly MA-41) it tested again in both early- and late-January. After being closer to mid-upper 97.00 resistance on previous weakness of the EURO and the POUND, it is back down into midrange on current EURO strength. This is another manifestation of friendly 'Fed-ticipation' borne out at the recent FOMC meeting.

Along with that, EUR/USD that had surged back above 1.1400 to near the 1.1500 resistance in thin New Year's Day trading was back marginally below 1.1400 once again in early January. Next support into 1.1250-00 was again neared on the January dip. While well back above 1.1400 into early February (and even very temporarily above the 1.1500 area), it had dropped back below the 1.1400 area on the increasingly nervous Brexit implications and generally weak European data to the top of the 1.1250-00

area 20-month trading lows in mid-February. Yet it recently recovered closer to 1.1400 once again, stalling into that area.

Brexit concerns were morphing into a bit of a 'good news is bad news' psychology in late-January on GBP/USD rally back above 1.28-1.30 (never reaching 1.25-1.24 area.) That was on the UK Parliament bills clarifying items that might have led to a Brexit delay. Later moves by PM May to address the Irish border issue that might have allow the orderly breakup to occur on time at the end of March faded temporarily.

Back above the low-1.2800 area for some time looks firm, and it has even sustained activity above the 1.30 area (including weekly MA-13 & MA-41) on further Brexit hope for a Brexit deadline delay beyond March 29th after PM May's recent discussions with EU officials. Next important historic congestion is 1.3250-1.3300 recently tested once again, with 1.3500-1.3600 above that.

And despite US changeability, the previous hint of US-China rapprochement encouraged AUD/USD to squeeze back above its historic .7200-50 area (also weekly MA-9 & MA-13.) However, that same negative early-December Trump 'Tariffs Man' tweet that hit US EQUITIES on the lower chances for US-China trade rapprochement also dropped AUD/USD back from a hopeful early-December test of the .7300-50 area to back below .7200-50. It was recently down into more major .7000 area congestion.

This is not a surprise on recent Chinese economic weakness and still somewhat problematic US-China relations, even if late-January secular US DOLLAR weakness had it recovering modestly above .7200-50 (now also weekly MA-41) prior to the current drop back below it toward the .7000 area once again prior to its current partial recovery. Next lower major support is not until the .6825 area early-2016 10-year trading lows.

And it is also notable that it is not doing better at present if indeed the US-China trade talks are about to conclude on a constructive note (whatever that may mean.) Is this possibly another sign that removal of stressors alone at this point will still not foster a return to previous strong growth? That certainly seems to be the case regarding the Fed's more accommodative

stance.

The EMERGING CURRENCIES are still more country-specific trends than previous, even if they enjoyed a bounce on the previous US-China potential rapprochement that somehow does not seem as apparent at present... another global economic performance concern.

The MEXICAN PESO that had seen USD/MXN drop back temporarily below its 20.00-20.20 congestion, had been back up on multiple November-December tests of the 20.50 area prior to sliding back below 20.00 again. It has also been below interim support at 19.70 as well as more major 19.60-.50 congestion since early January. Next lower congestion areas are in a range from 19.20 (high end which it was also below in January) to interim 18.70 and ultimately 18.50-.40 (low end.)

While recently back above 19.20, it is back below it once again and failed near there late last week. This might possibly be another sign of the Crude Oil strength influence (like the RUBLE.) Next lower support remains the 18.70 area seen on its January selloff.

And that was just part of the EMERGING CURRENCY return from weakness prior to the recent pressure. USD/ZAR had pushed up from below 14.00 to testing and failing from 14.50 again on its way back below 14.00 in November. Next lower support in the 13.60-.50 area was probed into the beginning of December prior to pushing temporarily back up into 14.40-.50 area and even 14.60 into the holidays prior to dropping back below 14.00 into the beginning of January.

Those areas remain important even after the recent drop below 13.60-.50 area, which has now been reversed on the push back above it. That said, the 14.00 area remains the more major congestion it is once again trading above at present, reinforced by a confluence of all weekly MA's in the 14.10-.00 area. Higher resistance remains in the 14.40-.50 area it had been testing over the past several weeks and the 14.69 (December high.)

USD/RUB remains an outlier on the recent EMERGING CURRENCIES return to weakness due to the now extensive Crude Oil recovery from the

depths of the December selloff. That is despite the recent RUBLE and Crude Oil selloffs: Watch the MAY WTI CRUDE OIL FUTURE back into the 58.00 area for the next indication there.

USD/RUB had reacted back down from above 67.00 yet was back above both it and 68.00 on the suffering of the Crude Oil market back then, even if it failed once again at the 70.00 area resistance in early January (just like early September.)

Yet it has recently been back below both 68.00 and 67.00 (including weekly MA-9 & MA-13) on the resurgence of Crude Oil from the depths below 50.00 to well back above it. Further support once again back into 65.00 (including weekly MA-41 up to 65.75 area) has now been breached as well, along with additional hefty mid-2018 congestion into the 64.00 area that was violated temporarily last week prior to recovering. While next support is as nearby as 63.00-62.50 congestion, that is very important due to next support below not being until the 61.50-.00 low end of that April-July 2018 range. The immediate question is whether it can recover back above all of the hefty 65.00 congestion.

In the meantime, previous improvement in the TURKISH LIRA had USD/TRY slipping once again from 5.50 late last year, even if it experienced an intraday spike above it to 5.6230 on January 3rd. While recently failing below 5.22 on the overall US DOLLAR weakness left it closer to the 5.13 late-November lows, back above 5.22 since early February rescued it back into the previous range.

That is very important now with weekly MA-41 now up into the 5.45 area as well. Outside of that recent temporary spike higher, the last two months had been mostly a trading range affair between 5.45 and 5.22 until the early January US-Turkey Syria disagreement put it back up for a test of 5.50 once again on sustained weak Turkish economic indications.

Now back above that again, the early-January 5.6230 trading high is the key resistance that has been violated. That is the last resistance this side of 5.90-6.00 and the more extended 6.35-6.40 (<http://bit.ly/2HNfvc8>) last seen

during the **TURKISH LIRA** upturn last September.

While still obviously less relevant (as we have been noting for some time) on the standard report releases in the midst of more major global trade and political cross currents, this week's **Weekly Report & Event Calendar** (accessible for Sterling and higher level subscribers) is available via the www.rohr-blog.com sidebar.

Yet in the context of the renewed focus on weak global economic tendencies, the regular data releases have become a bit more relevant once again. The most salient aspects this week are the **UK** actions on **Brexit** that will likely have quite an impact on the already weak **European** economy as well, a load of central bank-speak all week, and quite a bit of important data through the week into all of the typical major end-of-month data on **Friday**.

And as the final passing occurrence, the **UK** and **Europe** go onto their summer time clock adjustments, following the **US** switch to **Daylight Savings Time** two weeks ago.
