Subject: ROHR-BLOG: China Déjà Vu Redux, Quick Take, Calendar

[View this email in your browser](#)

Dear Subscribers,

No Surprises. As we noted in last Wednesday's 'China Déjà Vu' research note, last week's SEPTEMBER S&P 500 FUTURE rebound into the 3,000 'big penny' area "...is in part due to more hopeful US-China trade indications, and previous that has proven a false hope." And there it was again, with the next failure looming.

And we are coming to you quite a bit earlier than usual in the wake of the 'as expected' US Employment report even though there are other US economic data releases today. This is because all that 'rearview mirror' information is less important than the forward anticipation of the global macroeconomic impacts.

We have consistently highlighted the degree to which the broader tariffs and slow international trade issues are hurting the global economy. On that we have seen serial confirmation first from the NGO's (OECD, IMF, World Bank, etc.) followed by the central banks. As Mario Draghi put it at last week's ECB press conference, "*This outlook is getting worse and worse.*" Yet the US-China G20 Trump-Xi truce held out some hope for at least no further deterioration. That is now gone.

In fact, last week Wednesday's research note was very pointed on "*...there*

still does not seem to be any movement on bigger US-China issues...” as “...the talks will initially be more so about the promised Chinese purchase of US agricultural products that (have not happened)...” These were the diminished expectations which already spoke of low probability of success, and the talks ended early.

The global weakness also has been, and remains, apparent in the other asset classes. GOVVIES are very strong even if the US T-NOTE lags a bit. The BUND and GILT are nearly escaping key weekly Oscillator thresholds with next targets much higher. And the EURO, POUND and AUSSIE DOLLAR have been under a lot of pressure (more below on all of that.)

Market Quick Take

After the early June US-Mexico tariffs scare sent FRONT MONTH S&P 500 FUTURE back near the 2,722 March trading low, US EQUITIES rallied sharply. Lower supports at 2,865, 2,836-30 and 2,825-14 were all reinstated. Higher resistance was 2,900-10 area, with the May 2,938.25-2,947.50 gap lower from the all-time high Close above.

As those were overrun into mid-June, SEPTEMBER S&P 500 FUTURE was above historic Oscillator levels at 2,965-70 and 2,985, with the critical 3,015-20 area above that on the continued rise of weekly MA-41. Also note the major topping line out of January 2018 on the weekly chart (<http://bit.ly/2K7Qbx4>) through last Friday's Close, rising to 3,035 this week.

The question into this week (and beyond) was whether it can sustain a push above those levels, as the next Oscillator threshold above is not until the 3,065-75 range this week.

As noted repeatedly, the psychological key in light of recent levels is 'big penny' psychology. In this case 3,000 is not a fine line threshold, yet relates to trend momentum.

And that is why the current slam back below it on the Trump tariffs announcement is so important. Any overall trend reversal was always going

to be contingent on SEPTEMBER S&P 500 FUTURE failing back below that 2,938.25-2,947.50 area. And here it is testing it, with lower supports as noted above.

The balance is a courtesy repeat of Thursday's assessment

It is almost still a bit of a bore at this point, yet once again consistently weak international data on balance has continued for many weeks. This has been reinforced by central banks' perspective, including ECB and FOMC as well as the BoE concerns about Brexit.

As repeatedly noted for months, this is also consistent with serial downbeat OECD indications on a weaker global outlook. We saw more of the same in the most recent (July) OECD Composite Leading Indicators (<http://bit.ly/2SdMtWx>), and will get the next on August 8th.

And that outlook continues to be clouded by the US-China situation despite the ostensible 'breakthrough' at the G20 meeting. Especially note the recent US-China talks degenerating into nothing more than discussion of Chinese agricultural purchases and Huawei relief. Those ended a bit early, with only an agreement to continue talking... not very propitious,

There is also the continuing Brexit disconnect discussed at length during the BoE Inflation Report press conference and Trump's capricious flip into tariffs as a political weapon which has continued into the present: Accelerated Uncertainty (see the June 3rd research note) despite some recent US forbearance. All of this is good for the 'haven' GOVVIES as they fully revert to bullish activity from their reactions into mid-July. All of the recent weak OECD Composite Leading Indicators were reinforced by May's OECD Economic Outlook (<http://bit.ly/2HGYmz7>.) This is now also reinforced by all of the recent indications: IMF global growth downgrade, weak global Manufacturing PMI's and last week's further weakness in the German IFO survey.

The heavily discounted JUNE BUND FUTURE had been well back below the 164.00-.50 area while the MARCH BUND FUTURE early-March expiration neared. Yet after glancing the top of the 162.50-.00 range at the

end of February, more weak data and the ECB perspective put it right back up into the 164.00-.50 area.

That left the burden of proof back on the bears to weaken it below there, or suffer the next surge up into the 166.00-.50 major congestion it saw by late March. This was classic BUND bull trend rollover activity on the second month pushing back up into previous front month levels.

Extended resistance in the 168.00 area from mid-2016 was exceeded on the surge just prior to the early month June contract expiration, and even carried above the 168.86 June 2016 all-time FRONT MONTH BUND FUTURE high.

Yet as we noted extensively prior to that event, that was not the most bullish indication for the trend: The SEPTEMBER BUND FUTURE major 2.50 premium fostered even more bullish activity into that June contract expiration.

Note that the BUND FUTURE never turned into a bear trend on the reaction since 2016 from the bull trend into those highs, as is apparent on the weekly chart through last Friday's Close (<http://bit.ly/2LM7Ptp>.) As opposed to the T-NOTE (more below) that had indeed been in a bear trend since 2016 (recently reversing on its late May major channel UP Break), the BUND seems to have only been a reaction in a bull.

It is also Closed the first full week of June above the next extended weekly Oscillator threshold in the 171.00-.50 area, leaving a burden of proof on the bears. The next higher historic congestion was not until upper 172.00 area since mid-June with the 174.00 area above that. And even after it dropped back below the key 172.00 congestion into mid-July, it quickly recovered back above it the following week.

And the recovery has now extended above the higher recent upper 172.00 congestion, which pointed to a retest of the 174.05 early July all-time high. This week it is also above the next Oscillator resistance in the 174.25-.75 range, with 175.65 above that. Those are still increasing by 0.40 each week

based on strong upward MA-41 momentum.

After the MARCH T-NOTE FUTURE held around 121-12 again into early March, it was back above 122-00 after the previous Fed influence until the very strong February US Employment report. Weaker global data, and the central bank harmony on that factor, had seen it overrun higher interim 123-00/-08 area historic and recent resistance, which it only retested on the mid-April selloff with a Tolerance to the 122-16 area (including weekly MA-13.)

For the JUNE T-NOTE FUTURE the more prominent 124-00/-06 historic congestion remained the key area it pushed above more definitively into mid-May on trade worries. Next resistance above 124-00/-06 was the 125-00 area broadest down trend resistance directly derived from the overall trend trajectory from that 2016 high.

That was violated on the late May fresh major 125-00 down channel UP Break, which was an important bullish indication. It also pushed above the important 126-00 area congestion as well as the next resistance is not until the 127-16/128-00 area congestion and September 2017 rally high (128-03.)

The SEPTEMBER T-NOTE FUTURE was testing that area prior to the July US Employment report-driven downside reaction. Yet it held very well without violating the low end of the 128-00/127-16 congestion. However, its relative weakness within the bull trend (see the weekly chart through last Friday's Close <http://bit.ly/2MoiDxC>) is highlighted by its inability to overrun that congestion while the BUND and GILT have pushed up more aggressively. Also note the 127-31 early-July weekly DOWN Closing Price Reversal (CPR) (the solid red line) as further reinforcement for its near-term resistance with a 128-08 Tolerance.

The same was true for the MARCH GILT FUTURE that in the wake of more Brexit stress and the general global weakness, finally pushed above 124.00-.50. Yet that was the least of it, as the atypical significant premium (full 3.00) in the JUNE GILT FUTURE prior to the late-month March contract expiration was a major bullish sign.

This is obviously a Brexit premium anticipating continued economic weakness, and it had weakened a bit (as expected) on the major Brexit extension. JUNE GILT FUTURE was a bit back below 127.00-.50 after testing higher resistances in the 129.00 and 130.00 areas, yet held lower support in the (late March) automatically overrun 126.00-125.50 area. Back above 127.00-.50 since early-May opened the door to a test of those higher 129.00 and 130.00 area resistances it also then exceeded.

Higher resistances are the nominal 131.00-.50 range the JUNE GILT FUTURE was back up into prior to its expiration. And the typical full point discount in the SEPTEMBER GILT FUTURE left it well back below that range. While the overall strength of GOVVIES remained, the question was whether the SEPTEMBER GILT FUTURE that held the immediate lower support into 130.00 area on all pullbacks since early June was going to push back up into 131.00-.50; as indeed it did on a typical expiration rollover psychology.

While reacting back down near the 130.00 area in early July, it quickly pushed back above 131.00-.50. Next major higher resistances remain into the mid-2016 132.50 congestion and 132.97 all-time high have been exceeded.

That leaves us reverting to historic weekly Oscillator thresholds (much as with the recent BUND new all-time highs.) The scary part for the bears is that overrunning the old 132.97 all-time high also overran the weekly MA-41 plus 5.50-6.00 historic threshold that was most recently respected on the March rally. Next resistances are not until weekly MA-41 plus 9.50-10.00, equating to roughly 136.00-137.00 into next week and beyond.

In FOREIGN EXCHANGE strong US corporate earnings and relatively firmer economic data have assisted the US DOLLAR INDEX in finally fully overrunning the mid-upper 97.00 resistance. That required the push above the April-May 98.37 area trading highs which has now occurred. The FOMC statement and Powell's less dovish than some expected press conference strengthened the GREENBACK once again.

Next resistances are the interim 99.00 area, yet with the more prominent

area not until 100.00 'big penny' historic congestion. In any event, recently strengthening again above lower support in the interim 96.50-.00 range on the continued weaker global data outside of the US set the stage for the continued strength despite the FOMC's modest (and possibly temporary) easing.

While EUR/USD was well back above 1.1400 into early February (and even very temporarily above the 1.1500 area), it had dropped back below the 1.1400 area on the increasingly nervous Brexit implications and generally weak European data. That left it into the top of the 1.1250-00 area 20-month trading lows in mid-February. While it recovered closer to 1.1400 again into mid-March, stalling there had left it under pressure again into the low end of 1.1250-00 area.

GREENBACK weakness had assisted it in swinging well back above 1.1200, and it is no surprise it had extended that rally back up into the 1.1400 area on the previous dovish FOMC influence. However, recent weak European data fomenting rightful concerns over ECB accommodation has left it back below 1.1200 once again, and now even below recent 1.1100 area trading lows that sees it now down toward the 1.1000-1.0950 area with 1.0800 below.

Brexit concerns were morphing into a bit of a 'good news is bad news' psychology in late-January on GBP/USD rally back above 1.28-1.30 (never reaching 1.25-1.24 area.) Back above the low-1.2800 area for some time looked firm, and it had even sustained activity above the 1.30 area (including all weekly MAs in that area) into late February on hope for a Brexit deal or further deadline delay. Next important historic congestion was 1.3250-1.3300 tested once again in late March prior to the overall selloff resuming.

Brexit concerns left it retesting the 1.3000 area since late March with only minor bounces. As we had suggested, the major Brexit extension (October 31st) granted by the EU is not necessarily an economic positive even though it avoided an April 12th 'hard' no-deal Brexit crisis. It only exacerbates UK economic uncertainty. That was reinforced by Governor Carney's previous Inflation Report press conference comments revisited on August 1st.

This has been reflected since mid-May in GBP/USD slipping not just back below 1.3000, but also below the low end of the 1.3000-1.2800 key support range. This was recently even below the 1.2773 February selloff lows, and recent rallies have all failed into the 1.2800 area.

Lower key historic supports remain into the 1.2500-1.2430 range late 2018 (2-year) trading lows it had slipped below in the wake of stronger US economic data prior to temporary stabilization. More sustained activity below that has also now led to violation of interim 2016-2017 congestion at 1.2360, with nothing recent until the 1.2150-00 area this side of the 1.1710 major October 2016 34-year trading low. (That's right, not below 1.1710 since March 1985.)

And despite US changeability, the previous hint of US-China rapprochement encouraged AUD/USD to squeeze back above its historic .7200-50 area (also weekly MA-9 & MA-13.) However, that same negative early-December Trump 'Tariffs Man' tweet that hit US EQUITIES on the lower chances for US-China trade rapprochement also dropped AUD/USD back from a hopeful early-December test of the .7300-50 area to back below .7200-50. It was subsequently down into more major .7000 area congestion.

This was not a surprise on previous Chinese economic weakness and still somewhat problematic US-China relations despite the ostensible G20 'breakthrough'. While late-January secular US DOLLAR weakness had it recovering modestly above .7200-50, it subsequently dropped back below it toward the .7000 area once again prior to subsequent partial recoveries.

Recently below the .7000 area prior to the temporary squeezes, it is now well back below it once again. Next lower major support is the .6825 area early-2016 10-year trading lows it neared in mid-May and mid-June, and is now testing once again. Below that the interim supports are .6500 and .6250 this side of the .6000 area October 2008 16-year trading low.

While EMERGING CURRENCIES are still more country-specific trends, previous US DOLLAR weakness was assisting them once again. That is partially on central bank accommodation creating more extensive economic

hope that would be good for emerging economies.

And it is of note that even with the recent weakness of DEVELOPED CURRENCIES against the GREENBACK, the EMERGINGs were holding up fairly well on that same psychology. That has now reversed on the Fed sounding a bit less accommodative than many had assumed.

The MEXICAN PESO that had seen USD/MXN drop back temporarily below its 20.00-20.20 congestion, had been back up on multiple November-December tests of the 20.50 area prior to sliding back below 20.00 again. It has also been below interim support at 19.70 as well as more major 19.60-.50 congestion since early January. Next lower congestion areas are in a range from 19.20 (high end which it was also below in January) to interim 18.70 and ultimately 18.50-.40 (low end.)

While back below 19.20 in mid-March, it was back above it once again after nearing 18.70 area lower support also in mid-March (last seen on its January selloff.) Major 19.60-.50 congestion remains higher resistance this side of 19.90-20.00. Back below 19.20 of late on its way to 18.70 yet again had seen a quick rebound to test 19.20 prior to recently churning on both sides of the 19.00 area in March and April as well as again of late.

Yet Trump's tariffs threat had put the PESO back under extreme pressure, with USD/MXN surging right through 19.20 into the major 19.60-.50 congestion once again. Any sustained activity above that pointed to another test of the 20.00-20.20 area it neared on the rally two weeks ago. Yet of course the at least temporary withdrawal of the US tariffs threat has seen a substantial PESO rally on USD/MXN dropping back into the 19.20-.00 area.

Yet there is no surprise recent central bank accommodation dropped it back below 19.00 once again prior to the recent bounce back to 19.20 that left it stuck in the 19.20-.00 range since early June. However, possibly on better expectations for Mexico on USMCA agreement and overall US economic strength, it has stabilized even if no better than roughly 19.00.

And that was just part of the EMERGING CURRENCY return from weakness prior to the subsequent pressure. USD/ZAR had pushed up from

below 14.00 to testing and failing from 14.50 again on its way back below 14.00 in November. Next lower support in the 13.60-.50 area was probed into the beginning of December prior to pushing temporarily back up into 14.40-.50 area and even 14.60 into the holidays prior to dropping back below 14.00 into early January.

Those areas remained important even after the February drop below 13.60-.50 area, which was reversed on the push back above 14.00. The 14.00 area remains the more major congestion it has been once again back above since late April.

Higher resistance remained in the 14.40-.50 area it had exceeded into early June as well as the extended resistance at the 14.69 December high. Yet it stalled into next resistance in the historic 15.00 area. And the secular US DOLLAR weakness along with dovish central banks dropped it all the way back below 14.50-.40 since mid-June with 14.00 area below that. Yet the current confluence of factors has seen it push back up slightly above 14.40-.50 with higher levels remaining as noted above.

USD/RUB was a clear outlier on the previous and current EMERGING CURRENCIES return to weakness. That was due to the extensive Crude Oil recovery from the depths of December that is now also fading again with some pressure back on the RUBLE.

USD/RUB had reacted back down from above 67.00 yet was back above both it and 68.00 on the suffering of the Crude Oil market back in December, even if USD/RUB failed once again at the 70.00 area resistance in early January (just like early September.)

Yet it had been back below both 68.00 and 67.00 (including weekly MA-9 & MA-13) since January on the resurgence of Crude Oil from the depths below 50.00 to well back above it. Further support once again back into 65.00 (including weekly MA-41 up to 65.75 area) had been breached as well into mid-March. However, the additional hefty mid-2018 congestion into the 64.00 area was only violated temporarily into mid-March and again in mid-April.

Previous Crude Oil weakness had assisted USD/RUB recover back above 64.00 and 65.00 temporarily prior to slipping back below that range since mid-June. Lower supports at the recent mid-63.00 area lows have been violated, with the market only rebounding to test the 64.00 area on the previous rally and once again at present. More major supports are not until 62.00 and especially the 61.00 area.

In the meantime, previous improvement in the TURKISH LIRA had USD/TRY slipping once again from 5.50 late last year, even if it experienced an intraday spike above it to 5.6230 on January 3rd. While failing below 5.22 in January on overall US DOLLAR weakness left it closer to the 5.13 late-November lows, back above 5.22 since early February rescued it back into the previous range.

That was very important with weekly MA-41 up into the 5.50-5.60 area in April. Sustaining activity above the 5.50 and 5.6230 resistances in late April had seen it rally above the 5.90-6.00 range congestion from summer 2018.

This was once again very important, as extended resistance was not until the 6.35-6.40 range last seen during the beginning of the TURKISH LIRA upturn (USD/TRY extended selloff) last September. As such, the late-May USD/TRY drop back below 6.00-5.90 area was a major LIRA improvement.

Next lower supports (LIRA resistance) are 5.65-.60 (January high and weekly MA-41) tested into early June and barely violated into early July prior to Closing near the low end of the range, and the heftier congestion in the 5.50-5.45 area.

And it seems that even President Erdogan's dismissal of the central bank Governor Cetinkaya a year prior to the end of his term has not weighed too heavily on the LIRA. After USD/TRY recently ranged as high as 5.7871 prior to stabilizing, it has now dropped back below 5.65-.60 area despite the recent much larger than expected 4.25% rate cut with 5.50-5.45 below.

While still obviously less relevant (as we have been noting for some time and is most glaringly apparent again at present) on the standard report releases in the midst of more major global trade and political cross currents, this

week's Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the www.rohr-blog.com sidebar.

As a blended late month into the new month week this was a monster reporting phase. And that is along with major central bank meetings like BoJ on Tuesday into the highly anticipated FOMC rate cut and press conference Wednesday followed by the Bank of England full Inflation Report meeting with press conference today. And of course along with that there is all of the heavy late month data into today's still weak on balance Global Manufacturing PMI's and weaker US data. It all culminates into the next US Employment report on Friday.
