Subject: ROHR-BLOG: Trumpalumpa Redux... and then some, Quick Take, Calendar

[View this email in your browser](#)

Dear Subscribers,

Back in late May we send a couple of research notes citing the Trumpalumpa factor: as in which side was taking market lumps on Trump pronouncements. That has been sharply back in focus since early this month for US EQUITIES and the GLOBAL GOVVIES. The US EQUITIES gyrations around alternating key US-China trade trash talk and more accommodative communication (on both sides) has seen major swings, including Wednesday's worst day of the year.

And we are coming to you later than usual after our short holiday, in order to review all of the key factors. That is especially on the past couple of days' data that showed continued weakness in China and Europe, yet with strength in UK and US consumer activity along with UK labor market strength. So why should the EQUITIES remains so weak and GLOBAL GOVVIES so strong in that context?

It is because the industrial side of things remains very weak. Investor sensitivity to that is apparent from their flood into GOVVIES and other bonds, as detailed in last week's very good Financial Times article (<http://bit.ly/2TtsjIv>.) It is an axiom of longer term cycles that capital investment precedes strong growth, and its reversal leads to downturns... even if with long lead times.

And as of earlier this summer some US businesses were already warning that tariffs would hit earnings. While it is possible to suppress that for a while, a June Reuters (<https://reut.rs/33ywXcK>) article reviews which ones would be most heavily affected.

As noted in Friday's 'The Hits Just Keep On Coming', last Thursday's OECD Composite Leading Indicators (CLI <http://bit.ly/2MJ46g5> for our marked up version) only further reinforce the current on balance downbeat economic data; that extends to surveys measuring economic and industrial psychology.

In any event, much now rests with the musings of Donald Trump, and markets are inclined to move higher or lower on his latest trade and diplomacy mood swings. The problem now with EQUITIES rallies is that his previous radical flip-flops have suppressed global corporate capital investment.

And on a forward view EQUITIES seem to signal this will ultimately lead to a softer consumer and profits as well. This leads us to suspect friendly noises from Trump will have diminished impact across time, as seems to be the case in this week's EQUITIES and GOVVIES activity.

Market Quick Take

After the early June US-Mexico tariffs scare sent FRONT MONTH S&P 500 FUTURE back near the 2,722 March trading low, US EQUITIES rallied sharply. Lower supports at 2,865, 2,836-30 and 2,825-14 were all reinstated. Higher resistance was 2,900-10 area, with the May 2,938.25-2,947.50 gap lower from the all-time high Close above.

As those were overrun into mid-June, SEPTEMBER S&P 500 FUTURE was above historic Oscillator levels at 2,965-70 and 2,985, with the critical 3,015-20 area above that on the continued rise of weekly MA-41. Having failed to exceed that in July led to the recent major correction... even if not necessarily predicting its sharpness.

Any reversal needed SEPTEMBER S&P 500 FUTURE to fail below the 2,938.25-2,947.50 area, with 2,910-00 next. That left key lower support into important weekly MA-41 at 2,796 it so far only traded temporarily below, extending its hopeful rally back above 2,865 into 2,885 to the mid-2,900 area prior to the next negative influences. All of the interim congestion areas remain as noted above.

Even with the recent US and UK exceptions, it remains obvious that consistently weak international data on balance continues. This has been reinforced by central banks' perspective, including ECB and FOMC as well as the BoE concerns about Brexit.

As repeatedly noted for months, this is also consistent with serial downbeat OECD indications on a weaker global outlook. We saw more of the same in last week's (August) OECD Composite Leading Indicators

(<http://bit.ly/2MJ46g5> our marked up version.)

And that outlook continues to be reinforced by the US-China situation despite the ostensible ‘breakthrough’ at the G20 meeting. Especially note the recent US-China talks degenerating into nothing more than discussion of Chinese agricultural purchases and Huawei relief. Those ended a bit early, with only an agreement to continue talking despite Trump’s tariffs hike.

There is also the continuing Brexit disconnect discussed at length during the BoE Inflation Report press conference and Trump’s capricious flip into tariffs as a political weapon which has continued into the present: Accelerated Uncertainty (see the June 3rd research note) despite some recent US forbearance. All of this is good for the ‘haven’ GOVVIES as they continue to exhibit fully bullish activity after their reactions into mid-July.

All of the recent weak OECD Composite Leading Indicators were reinforced by May’s OECD Economic Outlook (<http://bit.ly/2HGYmz7>.) This is now also reinforced by all of the recent indications: IMF global growth downgrade, weak global Manufacturing PMI’s and further weakness in the recent German IFO survey and now Japanese Economy Watchers Surveys.

The heavily discounted JUNE BUND FUTURE had been well back below the 164.00-.50 area while the MARCH BUND FUTURE early-March expiration neared. Yet after glancing the top of the 162.50-.00 range at the end of February, more weak data and the ECB perspective put it right back up into the 164.00-.50 area.

That left the burden of proof back on the bears to weaken it below there, or suffer the next surge up into the 166.00-.50 major congestion it saw by late March. This was classic BUND bull trend rollover activity on the second month pushing back up into previous front month levels.

Extended resistance in the 168.00 area from mid-2016 was exceeded on the surge just prior to the early month June contract expiration, and even carried above the 168.86 June 2016 all-time FRONT MONTH BUND FUTURE high.

Yet as we noted extensively prior to that event, that was not the most bullish indication for the trend: The SEPTEMBER BUND FUTURE major 2.50 premium fostered even more bullish activity into that June contract expiration.

Note that the BUND FUTURE never turned into a bear trend on the reaction since 2016 from the bull trend into those highs. As opposed to the

T-NOTE (more below) that had indeed been in a bear trend since 2016 (recently reversing on its late May major channel UP Break), the BUND seems to have only been a reaction in a bull.

It is also Closed the first full week of June above the next extended weekly Oscillator threshold in the 171.00-.50 area, leaving a burden of proof on the bears. The next higher historic congestion was not until upper 172.00 area since mid-June with the 174.00 area above that. And even after it dropped back below the key 172.00 congestion into mid-July, it quickly recovered back above it the following week.

And the recovery has now extended above the higher recent upper 172.00 congestion, which pointed to a retest of the 174.05 early July all-time high. Last week it was also above the next Oscillator resistance in the 174.25-.75 range. And it is now also above the next elevating (increasing by 0.40 each week based on strong upward MA-41 momentum) threshold into the 176.00 area. Sustained activity above that points to the sort of extreme extension last seen in mid-2016 (weekly MA-41 11.75) into the 178.85 area (on a weekly Closing basis.) And that rising MA-41 means that will be up into the 179.25 area next week with the lower threshold moving up into 176.80.

After the MARCH T-NOTE FUTURE held around 121-12 again into early March, it was back above 122-00 after the previous Fed influence until the very strong February US Employment report. Weaker global data, and the central bank harmony on that factor, had seen it overrun higher interim 123-00/-08 area historic and recent resistance, which it only retested on the mid-April selloff with a Tolerance to the 122-16 area (including weekly MA-13.)

For the JUNE T-NOTE FUTURE the more prominent 124-00/-06 historic congestion remained the key area it pushed above more definitively into mid-May on trade worries. Next resistance above 124-00/-06 was the 125-00 area broadest down trend resistance directly derived from the overall trend trajectory from that 2016 high.

That was violated on the late May fresh major 125-00 down channel UP Break, which was an important bullish indication. It also pushed above the important 126-00 area congestion as well as the next resistance is not until the 127-16/128-00 area congestion and September 2017 rally high (128-03.)

The SEPTEMBER T-NOTE FUTURE was testing that area prior to the July US Employment report-driven downside reaction. Yet it held very well without violating the low end of the 128-00/127-16 congestion. However, its relative weakness within the bull trend was highlighted by its inability to overrun that congestion while the BUND and GILT have pushed up more aggressively. Also note the 127-31 early-July weekly DOWN Closing Price

Reversal (CPR) (the solid red line) as further reinforcement for its near-term resistance with a 128-08 Tolerance.

Yet Trump's recent Chinese tariffs move also drove more extensive T-NOTE strength above that resistance. Also obvious are the extended congestion resistances into 129-16 it is above and held during the early August reaction, and the 131-00 and 132-00 areas.

The same was true for the MARCH GILT FUTURE that in the wake of more Brexit stress and the general global weakness, finally pushed above 124.00-.50. Yet that was the least of it, as the atypical significant premium (full 3.00) in the JUNE GILT FUTURE prior to the late-month March contract expiration was a major bullish sign.

This is obviously a Brexit premium anticipating continued economic weakness, and it had weakened a bit (as expected) on the major Brexit extension. JUNE GILT FUTURE was a bit back below 127.00-.50 after testing higher resistances in the 129.00 and 130.00 areas, yet held lower support in the (late March) automatically overrun 126.00-125.50 area. Back above 127.00-.50 since early-May opened the door to a test of those higher 129.00 and 130.00 area resistances it also then exceeded.

Higher resistances are the nominal 131.00-.50 range the JUNE GILT FUTURE was back up into prior to its expiration. And the typical full point discount in the SEPTEMBER GILT FUTURE left it well back below that range. While the overall strength of GOVVIES remained, the question was whether the SEPTEMBER GILT FUTURE that held the immediate lower support into 130.00 area on all pullbacks since early June was going to push back up into 131.00-.50; as indeed it did on a typical expiration rollover psychology.

While reacting back down near the 130.00 area in early July, it quickly pushed back above 131.00-.50. Next major higher resistances remain into the mid-2016 132.50 congestion and 132.97 all-time high have been exceeded.

That leaves us reverting to historic weekly Oscillator thresholds (much as with the recent BUND new all-time highs.) The scary part for the bears is that overrunning the old 132.97 all-time high also overran the weekly MA-41 plus 5.50-6.00 historic threshold that was most recently respected on the March rally. Next resistances are not until weekly MA-41 plus 9.50-10.00, equating to roughly 136.60-137.10 this week, moving up into 136.90-137.40 next week.

In FOREIGN EXCHANGE strong US corporate earnings and relatively firmer economic data have assisted the US DOLLAR INDEX in finally fully

overrunning the mid-upper 97.00 resistance. That required the push above the April-May 98.37 area trading highs which has now occurred. The FOMC statement and Powell's less dovish than some expected press conference strengthened the GREENBACK once again.

Next resistances are the interim 99.00 area, yet with the more prominent area not until 100.00 'big penny' historic congestion. In any event, recently strengthening again above lower support in the interim 96.50-.00 range on the continued weaker global data outside of the US set the stage for the continued strength despite the FOMC's modest (and possibly temporary) easing.

However, the US DOLLAR INDEX falling back below the key 98.37 area it temporarily traded well above last week looks weak again. This seems like another example of the US being the problem NOT inspiring a 'haven' bid in the greenback.

While more troubling in light of the US EQUITIES performance is the possibility that Trump's tariffs shenanigans might finally be impacting the US markets despite strong employment and wage indications. We shall see. In the meantime, it held lower supports noted above, and weaker Chinese and European data has it back up into the 98.00 area again.

While EUR/USD was well back above 1.1400 into early February (and even very temporarily above the 1.1500 area), it had dropped back below the 1.1400 area on the increasingly nervous Brexit implications and generally weak European data. That left it into the top of the 1.1250-00 area 20-month trading lows in mid-February. While it recovered closer to 1.1400 again into mid-March, stalling there had left it under pressure again into the low end of 1.1250-00 area.

GREENBACK weakness had assisted it in swinging well back above 1.1200, and it is no surprise it had extended that rally back up into the 1.1400 area on the previous dovish FOMC influence. However, recent weak European data fomenting rightful concerns over ECB accommodation has left it back below 1.1200 once again, and recently below the 1.1100 area trading lows prior to bouncing from near the 1.1000-1.0950 area with 1.0800 below. While the recent recovery had it churning in the 1.1200 area, it is back into 1.1100 now.

Brexit concerns were morphing into a bit of a 'good news is bad news' psychology in late-January on GBP/USD rally back above 1.28-1.30 (never reaching 1.25-1.24 area.) Back above the low-1.2800 area for some time looked firm, and it had even sustained activity above the 1.30 area (including all weekly MAs in that area) into late February on hope for a Brexit deal or further deadline delay. Next important historic congestion

was 1.3250-1.3300 tested once again in late March prior to the overall selloff resuming.

Brexit concerns left it retesting the 1.3000 area since late March with only minor bounces. As we had suggested, the major Brexit extension (October 31st) granted by the EU is not necessarily an economic positive even though it avoided an April 12th 'hard' no-deal Brexit crisis. It only exacerbates UK economic uncertainty. That was reinforced by Governor Carney's previous Inflation Report press conference comments revisited on August 1st.

This has been reflected since mid-May in GBP/USD slipping not just back below 1.3000, but also below the low end of the 1.3000-1.2800 key support range. This was recently even below the 1.2773 February selloff lows, and subsequent rallies all failed into the 1.2800 area.

Lower key historic supports were into the 1.2500-1.2430 range late 2018 (2-year) trading lows it had slipped below in the wake of stronger US economic data prior to temporary stabilization. More sustained activity below that has also now led to violation of interim 2016-2017 congestion at 1.2360, with nothing recent until 1.2150-00 area this weak sister had managed to hold into until now. Yet the fact it had not managed a more substantial short-term bounce (like the EURO) was a troubling sign. It is now recovering from slightly below that last important support this side of the 1.1710 major October 2016 34-year trading low (post-Brexit referendum selloff low.) That's right, not below 1.1710 since March 1985.

And despite US changeability, the previous hint of US-China rapprochement encouraged AUD/USD to squeeze back above its historic .7200-50 area (also weekly MA-9 & MA-13.) However, that same negative early-December Trump 'Tariffs Man' tweet that hit US EQUITIES on the lower chances for US-China trade rapprochement also dropped AUD/USD back from a hopeful early-December test of the .7300-50 area to back below .7200-50. It was subsequently down into more major .7000 area congestion.

This was not a surprise on previous Chinese economic weakness and still somewhat problematic US-China relations despite the ostensible G20 'breakthrough'. While late-January secular US DOLLAR weakness had it recovering modestly above .7200-50, it subsequently dropped back below it toward the .7000 area once again prior to subsequent partial recoveries.

Recently below the .7000 area prior to the temporary squeezes, it is now well back below it once again. Next lower major support is the .6825 area early-2016 10-year trading lows it neared in mid-May and mid-June. And it finally failed below that (not surprisingly in the wake of last the early August Trump tariffs move), with next interim supports at .6500 and .6250

this side of the .6000 area October 2008 16-year trading low.

While EMERGING CURRENCIES are still more country-specific trends, previous US DOLLAR weakness was assisting them once again. That is partially on central bank accommodation creating more extensive economic hope that would be good for emerging economies.

And it is of note that even with the recent weakness of DEVELOPED CURRENCIES against the GREENBACK, the EMERGINGS were holding up fairly well on that same psychology until that was reversed on the Fed sounding a bit less accommodative than many had assumed and broader global economic concerns in the wake of Trump's China tariffs move.

The MEXICAN PESO that had seen USD/MXN drop back temporarily below its 20.00-20.20 congestion, had been back up on multiple November-December tests of the 20.50 area prior to sliding back below 20.00 again. It has also been below interim support at 19.70 as well as more major 19.60-.50 congestion since early January. Next lower congestion areas are in a range from 19.20 (high end which it was also below in January) to interim 18.70 and ultimately 18.50-.40 (low end.)

While back below 19.20 in mid-March, it was back above it once again after nearing 18.70 area lower support also in mid-March (last seen on its January selloff.) Major 19.60-.50 congestion remains higher resistance this side of 19.90-20.00. Back below 19.20 of late on its way to 18.70 yet again had seen a quick rebound to test 19.20 prior to recently churning on both sides of the 19.00 area in March and April as well as again of late.

Yet Trump's previous Mexico tariffs threat had put the PESO back under extreme pressure, with USD/MXN surging right through 19.20 into the major 19.60-.50 congestion once again. Any sustained activity above that pointed to another test of the 20.00-20.20 area it neared on the rally two weeks ago. Yet of course the at least temporary withdrawal of the US tariffs threat has seen a substantial PESO rally on USD/MXN dropping back into the 19.20-.00 area.

There was also no surprise recent central bank accommodation dropped it back below 19.00 once again prior to the recent bounce back to 19.20 that left it stuck in the 19.20-.00 range since early June. Possibly on better expectations for Mexico on USMCA agreement and overall US economic strength, it had stabilized even if no better than roughly 19.00.

However, in the wake of the latest Trump tariffs threatening global economic activity and the US EQUITIES and even possibly the North American economy, the PESO has sunk below the USD/MXN 19.50-.50 range once again. If it weakens sustains activity below the interim 19.60-.68

range, next levels are the 20.00-20.20 range again.

And that was just part of the EMERGING CURRENCY return from weakness prior to the subsequent pressure. USD/ZAR had pushed up from below 14.00 to testing and failing from 14.50 again on its way back below 14.00 in November. Next lower support in the 13.60-.50 area was probed into the beginning of December prior to pushing temporarily back up into 14.40-.50 area and even 14.60 into the holidays prior to dropping back below 14.00 into early January.

Those areas remained important even after the February drop below 13.60-.50 area, which was reversed on the push back above 14.00. The 14.00 area remains the more major congestion it has been once again back above since late April.

Higher resistance remained in the 14.40-.50 area it had exceeded into early June as well as the extended resistance at the 14.69 December high. Yet it stalled into next resistance in the historic 15.00 area. And the secular US DOLLAR weakness along with dovish central banks dropped it all the way back below 14.50-.40 since mid-June with 14.00 area below that. Yet the current confluence of factors has seen it push back up above 14.40-.50 and even the higher levels in the historic 15.00 area noted above.

Now through the early June high and historic congestion in the 15.17 area, the next significant historic congestion areas are not until the 15.70 and 16.00 areas.

USD/RUB was a clear outlier on the previous and current EMERGING CURRENCIES return to weakness. That was due to the extensive Crude Oil recovery from the depths of December that is now also fading again with some pressure back on the RUBLE.

USD/RUB had reacted back down from above 67.00 yet was back above both it and 68.00 on the suffering of the Crude Oil market back in December, even if USD/RUB failed once again at the 70.00 area resistance in early January (just like early September.)

Yet it had been back below both 68.00 and 67.00 (including weekly MA-9 & MA-13) since January on the resurgence of Crude Oil from the depths below 50.00 to well back above it. Further support once again back into 65.00 (including weekly MA-41 up to 65.75 area) had been breached as well into mid-March. However, the additional hefty mid-2018 congestion into the 64.00 area was only violated temporarily into mid-March and again in mid-April.

Previous Crude Oil weakness had assisted USD/RUB recover back above

64.00 and 65.00 temporarily prior to slipping back below that range since mid-June. Lower supports at the recent mid-63.00 area lows had been violated prior to the current recovery without getting down to major supports in the 62.00 and especially the 61.00 areas. Now back above 65.00 looks strong once again, especially with CRUDE OIL also weak on balance. The current strength above mid-65.00 congestion and weekly MA-41 opens the door to 67.00 and 68.00 again.

In the meantime, previous improvement in the TURKISH LIRA had USD/TRY slipping once again from 5.50 late last year, even if it experienced an intraday spike above it to 5.6230 on January 3rd. While failing below 5.22 in January on overall US DOLLAR weakness left it closer to the 5.13 late-November lows, back above 5.22 since early February rescued it back into the previous range.

That was very important with weekly MA-41 up into the 5.50-5.60 area in April. Sustaining activity above the 5.50 and 5.6230 resistances in late April had seen it rally above the 5.90-6.00 range congestion from summer 2018.

This was once again very important, as extended resistance was not until the 6.35-6.40 range last seen during the beginning of the TURKISH LIRA upturn (USD/TRY extended selloff) last September. As such, the late-May USD/TRY drop back below 6.00-5.90 area was a major LIRA improvement.

Next lower supports (LIRA resistance) are 5.65-.60 (January high and weekly MA-41) tested into early June and barely violated into early July prior to Closing near the low end of the range, and the heftier congestion in the 5.50-5.45 area.

And it seems that even President Erdogan's dismissal of central bank Governor Cetinkaya a year prior to the end of his term has not weighed too heavily on the LIRA. After USD/TRY recently ranged as high as 5.7871 prior to stabilizing, it has now dropped back below 5.65-.60 area despite the recent much larger than expected 4.25% rate cut with 5.50-5.45 also being tested last week. Yet it held that key area, and is now back up toward 5.65-.60.

While still obviously less relevant (as we have been noting for some time and is most glaringly apparent again at present) on the standard report releases in the midst of more major global trade and political cross currents, this week's Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the www.rohr-blog.com sidebar.

While a slow start to the reporting week picked up on Wednesday (especially out of China), the most critical impacts were into Thursday, with both UK and US Retail Sales along with much other US economic data.

That leads to a lighter day Friday albeit still including the Euro-zone Trade Balance and US housing data.
