Fed-speak and Much More, Quick Take, Calendar

Well, there was good news and bad news in Wednesday's FOMC April 28-29 meeting minutes release (<https://bit.ly/3e7tTc2> for our mildly marked-up version.) Good maximum central bank support, yet some still really dire projections on the overall US economy. See page 8 for the only section we actually highlighted.

It gets back to the key components we have been stressing for a while: the overt demand destruction from imposed COVID-19 social distancing edicts, the lower incomes for a major portion of US consumers once the government support programs end, and the general major drop in consumer confidence.

This is why despite the seeming resilience of the current US EQUITIES upward trend volatility, we are still skeptical the FRONT MONTH S&P 500 FUTURE will be able to sustain a rally extension beyond the August-October heavy 3,030 congestion.

That is the area it finally pushed above from based on a still accommodative October 30th FOMC announcement and press conference (<http://bit.ly/2ozXdUH>.) That rally extension to new all-time highs was also dependent on accelerated earnings assumptions that carried the market higher into early 2020.

Everyone can draw their own conclusion. Yet what are the realistic chances the US economy is not just going to rebound to some degree, but rather improve to the same degree as that upbeat period out of late 2019 into the February high prior to the COVID-19 pandemic? Among others (including the FOMC citing 40% of families with incomes below \$40,000/yr have lost jobs), we have noted the longer term impact of COVID-19.

Just this morning on CNBC, Argonaut Capital Management President & Portfolio Manager David Gerstenhaber noted that 81% of those who were unemployed in the latest US Employment report listed that status as 'temporary'. However, he felt there was now a "...substantive swatch of long-term unemployed people", and that would become more visible as the government support programs expire.

This is thoroughly consistent with our previously expressed views based on many factors, and we could not have said it better. And we are a bit later than usual today to also be able to digest the implications of this morning's global advance PMIs. While some of those were slightly improved, much like the employment situation they remain down at extremely weak levels.

Adding insult to injury, that also includes Existing Home Sales that was at the worst levels in almost a decade (i.e. the aftermath of the 2008-2009 Credit and Housing Bust.) We just still question the outlook.

Yet that is in the context of the US EQUITIES recovery rally continuing for now, and we still allow that it may push up into that higher resistance prior to reversing (much more below.) This is also consistent with the continued improvement of EMERGING CURRENCIES, some of which are pushing through important resistances. However, the extensive weakness of the economic data is also still leaving GLOBAL GOVVIES with a firm bid, as even weak sister German Bund recovers at present.

Market Quick Take

COVID-19 virus spread caused US EQUITIES intermediate-term bull psychology to 'crack'. Front month S&P 500 future was already back below key congestion around the mid-2019 3,030-00 previous all-time high congestion. That was below support from the push above the multi-year topping line at 3,070 as well, and left a late-February intermediate-term up channel 2,970 DOWN Break.

The subsequent DOWN Break below the FRONT MONTH S&P 500 FUTURE 2,600 area major up channel seemed to indicate more of a near-term failure. That was from the early 2016 low (<https://bit.ly/3dZzd1j> updated through Friday's Close.) That was the recent key higher resistance it had violated on its push above its 2,675 trading high Tolerance from prior to the DOWN Break (including monthly MA-48.)

As such, it is reasonable the JUNE S&P 500 FUTURE will now treat the low 2,600 area (with a Tolerance to the mid-2,500 area) as support. This leaves front month S&P 500 future up into a broad higher range, with the top back into the 3,000 area. The key levels along the way are previously violated support at 2,850 area and the 2,750 area, both of which had been exceeded. It held below the latter in late-April without ever nearing the 2,675 Negated Tolerance of the 2,600 area DOWN Break.

This left the open potential to retest that more prominent confluence of resistance factors in the 2,970-3,030 range despite the recent slippage. That resistance was further reinforced by the manner in which volatility has returned to the downside over the past two weeks. While recovering from below the 2,850 area previous, it had stalled on recent rallies.

This created a more highly focused Evolutionary Trend View (ETV) in the form of a near-term Head & Shoulders Top. That pattern is apparent on the daily chart (<https://bit.ly/3dJ6Wf7> updated through last Wednesday's Close.) Yet last Wednesday's 2,820 DOWN Break was nominal, and it recovered above it later on last week. That put the 'burden of proof' back onto bears to sustain activity back below 2,820-00 to confirm this is a bona fide top. As noted last week, any sustained activity above it signals a false top.

There were some key points to consider. The first is that the 'Neckline' (varied red line across recent lows) was on a steep angle. That is often a warning the pattern is not credible. And in any event, the JUNE S&P 500 FUTURE would have needed to Close below the 2,771 interim selloff low to reinforce the top; which obviously did not happen. On the upside, the classical Tolerance of the 2,820 DOWN Break is last week Monday's 2,947 trading high. Recent activity above it is pointing to a new high. Resilience is also apparent in the recent dip not reaching 2,890 interim support.

For more on the overall Evolutionary Trend View on the 'long arc', please see the Wednesday April 29 TrendView Video (<https://bit.ly/2SkZz5p>) on the JUNE S&P 500 FUTURE developments prior to the most recent test of the key higher resistance and subsequent downdrafts. However, all of the more major trend dynamics remain the same now as discussed since the middle of the week two weeks ago.

Evolutionary Trend View

Moving on now to a critical market assessment in the wake of the US EQUITIES recovering back above the 2,600 channel DOWN Break from the early-2016 FRONT MONTH S&P 500 FUTURE 1,800 area lows (projected from (from the 2,313 late 2018 low.) GLOBAL GOVVIES strength into early March was temporarily significantly reversed on the prospect of the major global fiscal stimulus likely weighing on those markets as well. Yet the current US EQUITIES strength is not reinstating that pressure for previously explored negative economic reasons that encourage the expectation there will also be little inflation anytime soon.

The **MARCH T-NOTE FUTURE** surging into a new all-time high into mid-March (i.e. shortly prior to its expiration) above the 134-00/-08 summer 2016 previous high was understandable (weekly chart through Friday's Close <https://bit.ly/2X9pjmX>.)

As we had based our future expectation on its historic weekly Oscillator activity likely extending its rally at least into the 135-16/136-00 area (MA-41 plus 06-00/-16), which was violated in early March. Sustained activity above that zone pointed to the next Oscillator resistance into the 138-00/-16 area (MA-41 plus 08-00/-16) it was already testing back then into its parabolic extension to the weekly Oscillator resistance in the 139-16/140-00 area (MA-41 plus 09-16/10-00) into mid-March prior to its sharp setback.

In fact, the sharp selloff later that week created a DOWN Closing Price Reversal (CPR) back below the 138-00 area (Tolerance the previous week's 138-16 high.) That is now resistance which has been repeatedly tested on the initial push above it and again in recent recoveries. 140-08/-24 area was next Oscillator resistance this side of the mid-March 140-24 all-time high (and trading high of that recent DOWN CPR.)

Even though it had been under pressure back below that 138-00/-16 area into early April, it is currently pushing back above it despite US EQUITIES strength. This reinforces the NEGATION of that mid-March 138-00/-16 DOWN CPR, which should indicate higher ground to come.

The next resistance is at near-term congestion in the 139-00 area it has churned around for the past several weeks prior to this week's drop back to test the 138-00/-16 area. And that didn't last very long before the current next push back above the 139-00 area.

Beyond that next resistance is the 140-24 mid-March all-time trading high with important extended Oscillator resistance above that into the 142-08/-24 (MA-41 plus 09-16/10-00) above into next week.

Similarly, the previous strong sister **BUND FUTURE** had seen the MARCH CONTRACT rally back to fully test and exceed its 177.00-.50 resistance from last summer (weekly chart updated through Friday's Close <https://bit.ly/2Zdq4Vu>.)

Much above that next resistance was not until 178.50 congestion from back then it hit prior to a week ago Friday's expiration, with a DOWN CPR at 179.20 (Tolerance at 179.67 all-time high) above. Yet there was a twist here on the typical very early expiration of the MARCH CONTRACT that Friday with the JUNE BUND FUTURE trading almost 3.00 lower.

While there was a chance it would be back into or below the 175.60-.00 area, in the event the strength of the uptrend extension in the MARCH BUND FUTURE to test that mid-179.00 resistance left the JUNE BUND FUTURE trading above 175.60-.00. That implied instead of weakening, it was more likely to trend up into the 177.00-.50 resistance and above.

Yet once the JUNE BUND FUTURE became front month in March it also dropped below the next lower 173.25-.00 support, and even back below the previously staunch 170.50-.00 NEGATED early November DOWN Break support that had been tested extensively over the winter. It is a clear sign of how concerned the BUND is about the necessary fresh fiscal largesse necessary to counter the heavy European COVID-19 impact.

Next lower support was not until back in the major 168.58-.00 area from during the summer 2016 previous all-time high congestion that it held on the sharp selloff into mid-March prior to the bounce back above the 170.50-.00 area.

The extended weak economic psychology had recently boosted it back up into the important 173.00-.50 range once again prior to renewed weakness into mid-April. Yet the current disappointment with the lack of an ECB 'Euro-bond' announcement to fund the COVID-19 pandemic rescue effort first created weaker economic expectations, yet then raised concerns over the ECB BUND buying program.

As such, after first boosting the JUNE BUND FUTURE back above the 173.00-.50 range it dropped back into for further tests over the past couple of weeks. It had even weakened below it early this week, likely on further concerns over the recent German Constitutional Court ruling. Yet the continued weak data has even this recent weak sister squeezing back above the low end of 173.00-.50 at present.

And we expect continued weak economic expectations will likely also see it pushup from that area once again, with next higher resistance remaining in the 175.00-.60 range not quite reached on the most recent rallies.

As far the MARCH GILT FUTURE was concerned, also at new all-time highs like the T-NOTE saw it overrun the September 2019 135.26 weekly DOWN Closing Price Reversal (Tolerance to 135.87) back in early March. That also overran some historic weekly Oscillator resistance at 137.00-.50 (MA-41 plus 4.00-.50.)

This left the next weekly Oscillator resistance at 139.00-.50 (MA-41 plus 6.00-.50) it had already tested and overran temporarily in early March. And much like the T-NOTE, its selloff into mid-March left a DOWN CPR from the previous week's 139.00 area Close.

The Tolerance of that DOWN CPR is right there as well due to that Close being at the high of the week. Not only did the MARCH GILT FUTURE fall back down into the 137.00 area, but the full point discount in the JUNE GILT FUTURE left it back below the 135.26 violated weekly DOWN Closing Price Reversal support.

That also saw the JUNE GILT FUTURE below the 130.00-.50 FRONT MONTH GILT FUTURE support into next historic low-128.00 congestion it hit temporarily on its sharp mid-March dislocation prior to the major rebound above the mid-low 135.00 area which held as support back into early April. The recent weaker economic expectations have boosted it back above 137.00 area congestion that held again on recent tests, with 139.00 area above it is nearing once again and the mid-low 135.00 area below.

In FOREIGN EXCHANGE the DEVELOPED CURRENCIES had also seen massive shifts over the past three months prior to quieting down once again. As noted previous, even though the US DOLLAR INDEX had a 'haven' bid as into mid-February, it then came under extensive pressure against the other DEVELOPED CURRENCIES (including the recent atypical depression of the other 'haven' JAPANESE YEN.)

ROHR RESEARCH NOTE Thursday, May 21, 2020

Yet the recent concerns about how poorly the other countries might fare under the extended COVID-19 impact had seen a partial 'haven' bid return to the greenback until the recent US DOLLAR INDEX stalling around the 100.00 area.

While the volatility in this area was also historically extreme prior to current stabilization, previous **US DOLLAR INDEX** weakness was not a surprise with COVID-19 is spreading in the previously 'safe' United States. Yet that was reversed on worse impacts elsewhere leading to a wild rally to 103.00 prior to settling back into the 99.00 area.

Firmer US economic data had assisted the US DOLLAR INDEX last summer in finally fully overrunning the mid-upper 97.00 resistance. That inspired the push above the April-May 98.37 area trading highs early last August prior to lapsing back into near-term weakness. Next levels were the interim 99.00 area, yet with the more prominent area not until the 99.50-100.00 'big penny' historic congestion.

After weakening in the end of February it failed back below 98.37-.00 (also important cluster of weekly MAs in the upper 97.00 area) on its way to also cracking the 96.50-.00 well-established congestion range support held at the end of last year. With the previous COVID-19 flight to US safety reversed, it was retesting the longer-term congestion in the 96.00-95.84 area (12-month trading low.) Much below that is the interim congestion into the recently tested 95.00 area it held into mid-March, with the more major 94.00-93.70 area below.

Yet the recent return of more pointed concerns elsewhere had seen it surge back above the 98.37-.00 area, and even above previously tested (February high) 99.50-100.00 and interim 101.30 into the mid-March retest of the more significant 102.00-.25 (late-2016/early-2017) congestion. Yet it then settled back temporarily below 100.00-99.50. Even though there was a late-March retest of 98.37-.00, it had been back up retesting 100.00-99.50 and slightly higher levels despite a late April retest of the 99.00 interim congestion area it is nearing again..

European currencies had been under pressure again versus the US DOLLAR. **EUR/USD** was under pressure previous early this year due to its still weak economy, the initial response to the COVID-19 spread there took it to 33-month lows below last October's 1.0878 trading low prior to the subsequent sharp recovery.

The EURO was then strengthening very much against the temporarily weak US DOLLAR due to previous 'greenback avoidance'. The US DOLLAR losing its haven bid had seen EUR/USD surge back above 1.0800 and even the more prominent 1.1000 area as well as the heavy 1.1250-00 area. That was the next lower support, yet with the greenback surging once again it was readily violated.

It then failed back below it as well as the interim 1.1100 area and even the more prominent 1.1000-1.0950 area. It was also back below last October's 1.0878 trading low once again. It also weakened below the more prominent historic and recent congestion in the 1.0800 area with a buffer to the weekly chart gap higher from a mid-April 2017 1.0722 weekly Close it weakened below prior to a recent recovery to the 1.1000 area. Since early April it has seen serial swings between the 1.0800 and 1.1000 areas with it approaching the higher area once again.

Yet if it should come back under pressure, that is just part of an entire broader range with interim congestion at 1.0500, a low end into the January 2017 1.0340 more than 17-year trading low (i.e. from the time of the EUR/USD recovery back above 1.0000 after several years of travails following its 1999 inception.)

GBP/USD had already held up much better against the US DOLLAR than other DEVELOPED CURRENCIES in the wake of the Brexit vote finally confirming its exit from the EU. While failing from 1.3500 again in December as well as back below the interim 1.3200 congestion, it only worked its way gradually into the historically important 1.3000-1.2800 range. Even on the late February US DOLLAR surge, GBP/USD only dropped to a Close near the bottom of that range.

However, the BoE leading the emergency rate cut efforts spooked the POUND bulls, leaving it back below 1.2800. Since then it Closed below 1.2500-1.2450 three weeks ago and even the interim 1.2200 area and previous major 1.2000-1.1960 September 2019 3.5 year low.

It was recently even below the October 2016 post-Brexit political crisis 1.1711 35-year trading low prior to the current rebound above it near the 1.2500-1.2450. While it sounds like a long way down, due to the nature of the aggressive 1984-1985 selloff and recovery, next support is not until the 1.1000 area.

Yet even that is also relatively minor congestion from that 1984-1985 swing down into and recovery from the 1.0345 February 1985 all-time low. Thankfully it had rebounded back above the 1.2200 area, even if only stalling back into the 1.2500-1.2450 area previous despite the mid-April very temporary blip above it.

Recent strength above that area has created a new interim resistance at the recent 1.2650 area highs, with next interim resistance into the 1.2700-50 range and more prominent resistance still into that broad 1.2800-1.3000 range. It is now back below 1.2500-1.2450, and is now only recovering slightly above the interim 1.2200 area after recently slipping below it with next support into that major 1.2000-1.1960 area below.

And despite US-China rapprochement on the Phase I trade and tariffs agreement, **AUD/USD** remains depressed on the heavier East Asian COVID-19 impact. That is only as expected, even as there has finally been a bounce on the lower Asian COVID-19 impact. Yet that is still from well below the .7000 area held in mid-May of last year.

Minor squeezes temporarily back above the .7000 area were only a prelude to slipping more definitively below it last July. Next lower major support was the .6825 area early-2016 10-year trading lows it also slipped below around the same time.

That is important after it slipped below next interim support at .6690-77 in early February on COVID-19 driven weak Chinese economic concerns. The .6500 area was the next support it slipped below along with violating the .6250 area next support. That was the last interim congestion this side of the now also violated .6000 area October 2008 17-year trading low.

The 'good' news here is that there is somewhat substantial 1998-2003 congestions at .5720, even if it washed out below temporarily in mid-March (trading low .5510) prior to the recovery back above the .6000 area it is holding back above at present and even exceeding that .6250 area violated support.

It is currently trading somewhat above the .6500 area after recent slippage below it. If it should weaken again, the .6250 and the .6000 area remain next lower supports. More major lower supports remain at .5325-15 and near .5000 this side of the very major April 2001 .4793 all-time trading low. Higher resistance remains in the .6690-77 area it slipped below in February.

USD/JPY was the prima facie example of the extreme mid-February 'haven' bid in the US DOLLAR, as the typical fellow 'haven' currency YEN came under heavy pressure on the USD/JPY surge above 110.00 for the first time since May 2019, leading to an immediate rally to the prominent 112.00-.50 area into the end of that week.

Yet here as well, once the US DOLLAR came under pressure on its loss of 'haven' status due to the COVID-19 spread in the previously safe US, at the end of February it 'crashed' back below the 110.00 area to Close into 108.00 again. Yet that did not hold since early March began on weakness that carried below the interim 106.00 area and once again below the very prominent 105.00-104.50 range (39-month trading low with major tests in March 2018, January 2018 and August 2019.)

Next lower congestion was not until the interim 102.50 area that USD/JPY traded below recently prior to and recovering back above the low 105.00 area as well as 108.00 and recently even the 110.00 area once again prior to the current weakness. Higher resistances remain in the 112.00-.50 and 114.00-.50 areas even if it sagged back below the 108.00 area of late toward 106.00 prior to the current recovery back toward 108.00.

And **EMERGING CURRENCIES** that had been under pressure had been recovering to some degree in February prior to coming back under pressure. The **SA RAND** has seen **USD/ZAR** overrun 15.40-.50 and even the 15.69 September 2018 high prior to pulling back previous.

Even though it sagged all the way to 15.20 in early March, it was back above 15.40-.50 and the 15.69 resistance a week later. Then it surged above the 16.00 and 16.30 next higher congestion resistances all the way into violating the 16.95 resistance in mid-March.

The weak economic outlook has caused it to now exceed the major January 2016 17.94 all-time high it had set back a bit from in the wake of the US rescue package last week. Yet it is important to note the next extreme weekly Oscillator thresholds (from 2008 and 2016) this week are 18.95 and 19.15 areas (weekly MA-41 plus 3.20 and 3.40), moving up by 0.10 per week. The recent improved sentiment on US EQUITIES had it back below that Oscillator threshold area into the middle of last month.

Yet it then surged well above them, setting up a potential RAND failure after the sharp early April USD/ZAR 19.00 DOWN Closing Price Reversal (CPR) with a Tolerance to the 19.08 high of the previous week. After vigorously testing that resistance last week, it is even more critical going forward. There is also the 19.33 all-time high of that DOWN CPR week.

It is also of note that the recent sharp slide of USD/ZAR from that 19.00 area only sagged to the very top of the near-term 18.00-17.80 recent congestion support prior to getting the bid back. As such, the near-term aggressive up trend was not in any way threatened. There was also the recent sharp upsurge in the wake of US EQUITIES previous near-term slide, that has finally seen USD/ZAR dropping well back below the 18.00-17.80 area it previously tested and held.

This is a further sign of how much central bank and government supports have encouraged a more upbeat outlook, whether that proves to be the case across time. On the current drop below the 17.75 weekly MA-13, the next short-term congestion support is back into the 17.55-.50 range, with more prominent historic congestion into 17.15-16.90.

Along with the Oscillator indications, the 19.00 area remains hyper-critical for USD/ZAR if it should rally once again. That is because Closing above those higher levels would create a critical failure on the SA RAND, potentially being subject to the sort of downside runaway activity the MEXICAN PESO experienced when USD/MXN overran 21.60 in early March.

If USD/ZAR strengthens beyond them, the next discernable resistances (updated for May) are not again until the 20.80 'return' (i.e. topping) line of the broad up channel (from the 6.5274 May 2011 major cycle low), and 21.00 area straight topping line across the 2008 and 2016 highs.

The RUSSIAN RUBLE had seen **USD/RUB** push above 66.50-67.00 on weak Crude Oil as well (economic weakness driven) prior to dropping back on short-term EQUITIES and CRUDE OIL recovery. Back out above it last week left the bigger resistance not until 69.00-70.00 it began this week pushing sharply above.

And historically there is not much resistance again until the 75.00 area (early 2016 congestion) which it tested into early March prior to pulling back nearer to the interim 71.00 area. Yet here as well the return of economic stresses had seen it rally back up above 75.00 of late on the previous hope for the global economy and (at long last) some reasonably significant Crude Oil improvement on the Russo-Saudi pumping truce.

That said, after recent USD/RUB strength again back above the 75.00 area, it has recently slipped somewhat below it on the Crude Oil stabilization and rally. Next interim support is previous congestion and recent trading lows into the 73.00-72.70 area it is currently retesting, with the more major support still into the 71.00-70.00 area it is currently retesting. Higher interim resistance if it manages to rally above 75.00 remains the 77.00-.50 area, with 80.00 above that.

In that regard, even the previously more resilient MEXICAN PESO saw **USD/MXN** surge above the 20.25 resistance in early March leading to an explosive rally. Here as well PESO weakness continued on the COVID-19 North American impact, with next resistances at 20.50 and 20.65 sharply overrun into mid-March on the way to also violating the 20.96 June 2018 high (also congestion) on the way to surging above the 22.03 January 2017 all-time high as well.

And the return of the economic stresses and weak Crude Oil prices had seen it surge to a new 24.62 all-time high out of mid-March, which had been exceeded on the US rescue package worries leading to another new 25.44 all-time high in late March prior to setting back around the mid-low 23.00 area. That left a weekly DOWN CPR from 24.40 (Tolerance 24.62) as new near-term resistance, yet which was NEGATED on last week's push higher (and Closing above it.)

Despite the Russo-Saudi pumping truce not fomenting a Crude Oil rally, there was also another round of USD/MXN weakening from the early April 25.76 new all-time high. That left yet another weekly DOWN CPR from 24.96 (Tolerance 25.04) the critical elevated near-term topping signal key resistance now after it pushed above that mid-24.00 area. Much like USD/ZAR stalling from its 19.00 retest, USD/MXN falling back from the 25.00 area critical resistance below the low-24.00 area is a positive PESO sign.

Lower support is the recent congestion in the low 23.00 area it neared in early April yet has not neared on the current selloff. There is also the overrun weekly Oscillator resistance (MA-41 plus 2.30) that is up into the 22.85 area next week, leaving it more critical from current levels (and with weekly MA-13 pushing up to the mid-23.00 area next week.)

Of note, the USD/MXN strength since early March has also been significantly above previous prominent weekly Oscillator resistance that should have kicked in around 21.60 in early March. The churn into that 25.00 DOWN CPR and other swings into that area have set a fresh extended weekly Oscillator threshold at weekly MA-41 plus 5.00-5.30. That is into the 25.45-25.75 area this week (i.e. right into the recent new all-time trading high.)

The TURKISH LIRA had been relatively steady through all of the EMERGING CURRENCY turmoil elsewhere. Yet it has been under pressure since **USD/TRY** held key 5.50-5.45 support and pushed back above 5.65-.60 range along with last July's 5.7871 high from after the central bank governor dismissal. Key resistance at 5.90-5.93 was also exceeded again in January.

USD/TRY even strengthened above the 6.00 area that seemed to point to a retest of interim 6.15 area that was also exceeded on the way to a test of the May 2019 crisis 6.25 area 17-month trading high. Compared to the weakness of other EMERGING CURRENCIES this previously left the LIRA a bastion of stability.

Yet above the 6.25 area since mid-March left the door open to a test of the higher September 2018 6.45-6.55 congestion it had exceeded again prior to the temporary subsequent setback into that area later on in March. Since mid-April it has rallied above extended higher resistances at 6.72 and 6.83. That left the 7.10 area previous 2018 crisis all-time high it has now exceeded.

That put it up above the high end of some key weekly Oscillator resistance (MA-41 plus 75-85) at 6.85-6.95 this week, with the decision now more critical since it recently traded above that previous 7.10 area all-time high prior to the current slide back toward the Oscillator projections. Now weakening further below that Oscillator range looks good for the LIRA.

If it should push up strongly again, the 2018 thresholds are not until much higher: 7.80 and 8.30 (MA-41 plus 1.70 and 2.20.) However, at least so far it has loosely defended the Oscillator resistance up to near that 7.10 area previous 2018 crisis all-time high. Next lower support is into that old 6.72 area, with weekly MA-13 right into that area next week as well.

Reports & Events

While still obviously less relevant (as we have been noting for some time and is most glaringly apparent again at present) on the standard report releases in the midst of more major global trade and political cross currents, the Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the www.rohr-blog.com sidebar.

As we have been noting for some time in our research notes, regularly scheduled releases are obviously less relevant in the face of the COVID-19 'macro' factors. That said, there are still some very important economic releases and central bank influences again this week.

While outside of Japanese GDP Monday was light economic data day, there was the Eurogroup meeting and Bundesbank Monthly Report. Tuesday picked up markedly with Australia's RBA meeting minutes along with still quite weak Japanese and European economic data and similar indications on the German and Euro-zone ZEW Surveys. Those were followed by Fed Chair Powell's and Treasury Secretary Mnuchin's Senate somewhat downbeat yet still very supportive testimony on the coronavirus relief actions.

Wednesday brought Australia's still very weak Westpac Leading Index and China's PBoC Interest Rate Decision that was a surprising 'no change'. Then there was still weak inflation data out of the UK, Euro-zone and Canada in front of the FOMC meeting minutes. Today saw those global Advance PMIs even as the Swiss and European markets were closed for Ascension Day, followed by important US and Canadian data along with a further possibly important speech by Fed Chair Powell at 14:30 EDT.

Friday sees important UK and Canadian Retail Sales data with the ECB April 29-30 Monetary Policy Meeting Accounts along the way, and a very limited US reporting day into selective early market Closes in front of next Monday's US Memorial Day holiday.

ROHR RESEARCH NOTE Thursday, May 21, 2020

And due to the vagaries of the COVID-19 volatility, we still maintain our recent classic advice that was fully vindicated late last week: Keep those seat belts firmly fastened.
