Deja Vu Fed Disappointment, Quick Take, Calendar

It's back to the June 10th FOMC announcements and Powell press conference, which led to such disappointment that the US EQUITIES had a significant drop over the ensuing several days. Much the same as June, the Fed confirmed all of its major previous accommodative stances. Yet also as in June, they did not offer any 'additional' radical steps which some market participants had hoped to hear.

This time it was on the FOMC July 28-29 Meeting Minutes (**https://bit.ly/2CNkyt6** our marked-up version for ease of identification of key sections) noting the still very significant pandemic risks to the US economy. Yet the Fed had nothing new to then add on any additional action. Amidst that general assessment, there were several key sections worth noting in their own right. See the highlighted sections in pages 7-11, but especially the page 3 note regarding small business impact.

This explains quite a bit about how the still dire broad economic and employment indications (reinforced on the unexpected significant jump in US Initial Weekly Jobless Claims) are not impeding US EQUITIES sustained rally. The small businesses which are not part of major stock indices are continuing to suffer while major firms that have direct access to capital markets can borrow heavily at the current very low rates. The big get bigger while the small suffer.

This also has to do with the nature of businesses: online centered ones versus direct contact shops like restaurants, retail goods shops theaters, etc. As the FOMC minutes note, "*In contrast, smaller firms not well represented in the S&P 500 may be experiencing greater effects on their businesses due to the virus*."

This stress on smaller businesses is also discussed further in the section on borrowing costs. Credit conditions for small businesses considered at risk are rightfully tightening on their lenders' concerns about their overall viability.

And those were not unreasonable in light of the additional FOMC minutes note that "...*the prospect arose of many businesses having to shut down operations again in response to rising coronavirus cases. Small business loan performance deteriorated significantly; short-term delinquencies were comparable with levels seen in early 2008*." Not surprisingly, the FOMC again implored Congress to act.

A very good synthesis on these important cross currents regarding the fate of big and small businesses was CNBC's Steve Liesman discussing it with Allianz' Mohamed El-Erian (**https://cnb.cx/2Qbcm8Y**) this morning. Liesman reminds us that US small businesses represent between 50% and 60% of total employment, and the crippling of small businesses in favor of large ones also stifles critical innovation.

In addition to reviewing the same topics in the FOMC minutes, El-Erian makes a very good point near the end of the segment on the extreme need for Congress to do more. He notes that small businesses are not just employers. "*They also are the main way to have inclusive capitalism, and an inclusive market-based system. And if you want capitalism to be sustained, you need buy-in from a lot of people. You cannot get buy-in if it's all about large corporations*."

Then there was the other topical issue on which some folks fixated as the next Fed radical action 'panacea' that they were hoping to hear it endorse: Yield Curve Management, which the minutes referred to as "yield caps and targets."

Yet it was clear that the FOMC was not at all interested in that at this time. It rightfully noted, "... *most judged that yield caps and targets would likely provide only modest benefits in the current environment, as the Committee's forward guidance regarding the path of the federal funds rate already appeared highly credible and longer-term interest rates were already low*." While once again well said, this is likely an area where the most bullish US EQUITIES expectations were disappointed.

The extensive 'bifurcation' we have noted between the psychology of different asset classes is confirmed as being based on economic divergence as well. It is a matter of the US (and in some good measure the global) economy rotting from the foundation even if the businesses at the top are perversely thriving on amenable credit conditions delivered in part by the Main Street weakness. At some point this is likely to catch up with larger businesses as well. In the meantime, US EQUITIES hold setbacks.

The headwinds for the global economy and areas beyond small businesses like commercial real estate continue as significant concerns we will revisit soon. China's loss of global export share is a concern after the recent extreme miss on its Retail Sales, which speaks of its failure to transition to a consumer-led economy.

Even those firms which are encouraging employees to return to urban offices are seeing a very low uptake… and are not at all bothered by it. It will likely lead to lower rent bills in future. Yet that will be a real problem for landlords and banks down the road; even if many are hoping for better conditions. Shades of 2008.

This is why despite the US EQUITIES resilience the GLOBAL GOVVIES have regained their bid after last week's US inflation data hiccup. And while the US DOLLAR has regained some ground against the DEVELOPED CURRENCIES, it remains a long way from any sign its overall downward trend is reversing.

And EMERGING CURRENCIES that had regained some ground of late are back under some nominal pressure once again. We suspect that is on today's weak US Initial Jobless Claims, yet with the bigger indication coming in Friday's next round of global Advance PMIs that are anticipating further nominal Manufacturing gains.

Courtesy Repeat of Wednesday's Quick Take

COVID-19 virus spread caused US EQUITIES intermediate-term bull psychology to 'crack'. Early March already saw FRONT MONTH S&P 500 FUTURE back below key congestion around the mid-2019 3,030-00 previous all-time high congestion. That was below support from the push above the multi-year topping line at 3,070 as well, and left a late-February intermediate-term up channel 2,970 DOWN Break.

The subsequent DOWN Break below the FRONT MONTH S&P 500 FUTURE 2,600 area major up channel seemed to indicate more of a near-term failure. That was from the early 2016 low (**https://bit.ly/3h5ruRg** updated through Friday.) That was then the key higher resistance subsequently violated on its mid-April push above its 2,675 trading high Tolerance from prior to the DOWN Break (also monthly MA-48.)

The FRONT MONTH S&P 500 FUTURE pushing out of the broad higher range top in the 3,030-2,970 area in early June was the key to it surging to the 3,200 area. That was the next meaningful higher resistance with a 3,230 Tolerance at which it failed previously on the current rally. Yet pushing above it in late July opened the door to a retest of the February 24th major gap down from the February 21st 3,339.25 weekly Close it has managed to Close above once again two weeks ago.

The only nominal resistance above that is February's 3,397.50 front month future all-time high. Along the way is a minor 3,381 DOWN Closing Price Reversal (CPR) from that topping week (Tolerance 3,388.50.) Yet that CPR is so minor in the face of a major rally back from the February-March debacle, it is hard to imagine it can prevent the FRONT MONTH S&P 500 FUTURE from at least taking a look above 3,397.50. Current trading up into the low-3,390 area supports that previous view.

That is also just above the extended 'adjusted' weekly Oscillator range, with the next (all-time) Oscillator range not until the 3,405-10 area this week, and also riding $7 per week on the continued MA-41 rise. That is the same threshold where it stalled in February, which we already knew from the Oscillator 'adjustment' we made after the market strength on the extended rally into early 2017. It's going to be very interesting.

Does classical over-extension take its toll, or do US EQUITIES just power higher? For more on those 'contingencies' based on adjustment to the previous classical Oscillator thresholds (and how they were evolved), please see Tuesday's research note.

Evolutionary Trend View

Moving on now to a critical market assessment in the wake of the US EQUITIES pushing further above the 3,200-30 range on their approach to the old February S&P 500 all-time high. Yet that has still not bothered GLOBAL GOVVIES strength that had peaked into early March prior to being temporarily significantly reversed on the prospect of the major global fiscal stimulus likely weighing on those markets as well. Even though the early June US EQUITIES strength and the recent US inflation indications were finally bringing more pressure, the overall up trend remains intact unless key lower levels are violated.

While EMERGING CURENCIES were sustaining rebounds until several weeks ago, that was in part likely due to the extent of the COVID-19 impact on the US preventing the US DOLLAR from attracting the typical crisis 'haven' bid. And it seems much the same again at present, with the broader global economic outlook remaining stressed despite upbeat US EQUITIES psychology.

The **MARCH T-NOTE FUTURE** surging into a new all-time high into mid-March (i.e. shortly prior to its expiration) above the 134-00/-08 summer 2016 previous high was understandable (weekly chart through Friday **https://bit.ly/3hgPQYq**.) As we had based our future expectation on its historic weekly Oscillator activity likely extending its rally at least into the 135-16/136-00 area (MA-41 plus 06-00/-16), violated in early March.

Sustained activity above that zone pointed to the next Oscillator resistance into the 138-00/-16 area (MA-41 plus 08-00/-16) it was already testing back then into its parabolic extension to the weekly Oscillator resistance in the 139-16/140-00 area (MA-41 plus 09-16/10-00) into mid-March prior to its sharp setback.

In fact, the sharp selloff later that week created a DOWN Closing Price Reversal (CPR) back below the 138-00 area (Tolerance the previous week's 138-16 high.) That is now resistance which has been repeatedly tested on the initial push above it and again in recent recoveries. 140-08/-24 area was next Oscillator resistance this side of the mid-March 140-24 all-time high (and trading high of that recent DOWN CPR.)

Even though the JUNE T-NOTE FUTURE had been under pressure back below that 138-00/-16 area into early April, it is currently pushing back above it despite US EQUITIES strength. This reinforces the NEGATION of that mid-March 138-00/-16 DOWN CPR, which should still indicate higher ground to come despite the recent stall into the upper 139-00 area.

The next resistance is at near-term congestion in the 139-00 area it had churned above prior to repeated mild selloffs back in May to test the 138-00/-16 area. And that didn't last very long before the recent next push back above the 139-00 area. Beyond that next resistance is the 140-24 mid-March all-time trading high.

Even though the early June drop back below the 138-00/-16 area left the door open to a test of the overrun mid-2012 previous 135-16/-00 area all-time high, the recent less upbeat economic indications from the OECD, Fed and the IMF had seen it rebound back above the 139-00 area.

In the wake of its mid-June recovery, the SEPTEMBER T-NOTE FUTURE was above the key 138-16/-00 range as lower support again, with it recently pushing back above the 139-00 area and finally also above 139-24 recent heavy congestion. Oscillator resistance (weekly MA-41 plus) was up around the 140-24 all-time high last week, extending to 141-04/-20 this week.

And while sometimes the PPI surge is not reflected in the CPI, last week it was. Yet the real question remains whether this is a full trend reversal, or a partial give back of bull trend gains with the further decision to come? We believe it is the latter.

In the case of the FRONT MONTH T-NOTE FUTURE (September), it has slipped back below previously violated 139-20/-24 heavy congestion from the previous four months. However, the NEGATED DOWN Closing Price Reversal top from early March was in the 138-16/-00 range. While the key weekly Moving Averages are up in the low 139-00 area it tested and held, only a failure back below 138-00 would reinstate any aggressive downside momentum.

Similarly, the previous strong sister **BUND FUTURE** had seen the MARCH CONTRACT rally back to fully test and exceed its 177.00-.50 resistance from last summer (weekly chart updated through Friday **https://bit.ly/2E5fUak**.) Much above that next resistance was not until 178.50 congestion from back then it hit prior to the June contract expiration, with a DOWN CPR at 179.20 (Tolerance at 179.67 all-time high.)

Yet there was a twist here on the typical very early expiration of the MARCH CONTRACT that Friday with the JUNE BUND FUTURE trading almost 3.00 lower. Once the JUNE BUND FUTURE became front month in March it also dropped below the next lower 173.25-.00 support, and even back below the previously staunch 170.50-.00 NEGATED early November DOWN Break support that had been tested extensively over the winter.

It was a clear sign of how concerned the BUND was about the necessary fresh fiscal largesse necessary to counter the heavy European COVID-19 impact. Next lower support was not until back in the major 168.58-.00 area from during the summer 2016 previous all-time high congestion that it held on the sharp selloff into mid-March prior to the bounce back above the 170.50-.00 area.

The extended weak economic psychology had boosted it back up into the important 173.00-.50 range once again in mid-June prior to renewed weakness. As such, the JUNE BUND FUTURE back above the 173.00-.50 range then dropped back slightly below the more major 170.50-.00 congestion next lower support shortly prior to its expiration last Monday.

The biggest recent news in Europe has been German agreement to participate in a very major pan-European COVID-19 relief fund. At €750 billion it far outstrips any individual country rescue package to date. As such, the secular weight on the BUND was more so from what appeared to be a change in the draw on the German treasury from a broader European spending program. This is the sort of thing resisted for years, along with any deficit spending fiscal stimulus.

That additional pressure on the German treasury goes some way to explaining why the JUNE BUND FUTURE failed below key 173.50-.00 support in late May while others held equivalent levels. Yet there was a key ‘technical’ event looming into the first Monday in June: the early quarterly expiration of the front month BUND FUTURE.

And these have seen serial major premiums and discounts in the second month which are far beyond what is experienced in the other long-dated bond futures. In this case SEPTEMBER BUND FUTURE was trading at a 3.00 premium to the June.

The early June ‘risk-on’ psychology had seen JUNE BUND FUTURE drop slightly below the low 170.50-.00 area again. Even with the 3.00 SEPTEMBER BUND FUTURE premium, it was also just a bit below the 173.50-.00 area on its weekly Close in early June.

Yet the less than encouraging economic data and outlook from both the OECD and the Fed earlier in June saw it surge back above the 173.50-.00 area to retest the low end of 173.00-.50 resistance again. Continued concerns even saw it ramp up into and above 175.00-.50 area that it has maintained as support on all recent selloffs, reinforced by more recent IMF indications.

The next resistance was in the 177.00-.50 area it neared on recent rallies, and temporarily traded above three weeks ago. Yet last week it fell back below the key 177.00-.50 congestion it never managed to post a weekly Close above on its recent rally extension. Yet the lower key area it has been above for almost the full past two months is the low end of the 175.50-.00 range. Of note, weekly MA-13 is also in that range, reinforcing its importance to the broader trend decision that has seen it hold for now.

As far the MARCH **GILT FUTURE** was concerned, also at new all-time highs like the T-NOTE saw it overrun the September 2019 135.26 weekly DOWN Closing Price Reversal (Tolerance to 135.87) back in early March. That also overran some historic weekly Oscillator resistance at 137.00-.50 (MA-41 plus 4.00-.50.)

This left the next weekly Oscillator resistance at 139.00-.50 (MA-41 plus 6.00-.50) it had already tested and overran temporarily in early March. And much like the T-NOTE, its selloff into mid-March left a DOWN CPR from the previous week’s 139.00 area Close.

The Tolerance of that DOWN CPR is right there as well due to that Close being at the high of the week. Not only did the MARCH GILT FUTURE fall back down into the 137.00 area, but the full point discount in the JUNE GILT FUTURE left it back below the 135.26 violated weekly DOWN Closing Price Reversal support.

That also saw the JUNE GILT FUTURE below the 130.00-.50 FRONT MONTH GILT FUTURE support into next historic low-128.00 congestion it hit temporarily on its sharp mid-March dislocation prior to the major rebound above the mid-low 135.00 area which held as support back into early April.

The weaker May economic expectations had boosted it back above 137.00 area congestion that had held on recent tests, with 139.00 area above that restraining the recent rally prior to the dip back into the 138.00 area. Even though back below the 137.00 area into early June (like weakness elsewhere), the recent ‘macro’ perspectives from the OECD, Fed and the IMF had seen it push back above it and 138.00 toward the 139.00 area into mid-June,

Yet the concern over BoE expanded QE led it back down from there. However, even the 0.85 discounted SEPTEMBER GILT FUTURE rallied from below the 137.00 area into the June 26th June contract expiration, and held it on previous recent setbacks in the face of the US EQUITIES renewed ‘risk on’ influence, also pushing back up above the 138.00 area that it ticked just a bit below late last week. That said the early March 139.00 area weekly DOWN Closing Price Reversal resistance managed to constrain it, reinforced by the failed test of that area in mid-May.

Although back above 138.00 congestion of late, here as well the lower key support is not until the 136.00 area (with weekly MA-41 somewhat loosely below it.) Even if it was below interim 137.00 area support of late, it is squeezing back above it at present. That said, only a violation of 136.00 area would signal a broader bull trend reversal.

In **FOREIGN EXCHANGE** the **DEVELOPED CURRENCIES** had also seen massive shifts in the Spring prior to quieting down once again. As noted previous, even though the **US DOLLAR INDEX** had a ‘haven’ bid into mid-February, it then came under extensive pressure against the other DEVELOPED CURRENCIES (including an atypical depression of the other major ‘haven’ currency **JAPANESE YEN**.)

Yet the concerns about how poorly the other countries might fare under the extended COVID-19 impact had seen a partial ‘haven’ bid return to the greenback until the recent US DOLLAR INDEX stall around the 100.00 area and dropping once again into and now even below the 98.00 area. While there was some interim congestion in the 97.00 area, it is now below the next major congestion in the 96.00 area and setting a new 2-year low below the March 94.65 low. That is likely due the US now fully being a major center of the COVID-19 problem, and very much less attractive as a haven than during external global crises.

While the volatility in this area was also historically extreme prior to current stabilization, previous **US DOLLAR INDEX** weakness was not a surprise with COVID-19 is spreading in the previously ‘safe’ United States. Yet that was reversed on worse impacts elsewhere leading to a wild rally to 103.00 prior to settling back into the 99.00 area.

Firmer US economic data had assisted the US DOLLAR INDEX last summer in finally fully overrunning the mid-upper 97.00 resistance. That inspired the push above the April-May 98.37 area trading highs early last August prior to lapsing back into near-term weakness. Next levels were the interim 99.00 area, yet with the more prominent area not until the 99.50-100.00 ‘big penny’ historic congestion.

After weakening in the end of February it failed back below 98.37-.00 (also important cluster of weekly MAs in the upper 97.00 area) on its way to also cracking the 96.50-.00 well-established congestion range support held at the end of last year. With the previous COVID-19 flight to US safety reversed, it was retesting the longer-term congestion in the 96.00-95.84 area (12-month trading low.) Much below that is the interim congestion into the recently tested 95.00 area it held into mid-March, with the more major 94.00-93.70 area below.

Yet the previous return of more pointed concerns elsewhere had seen it surge back above the 98.37-.00 area, and even above previously tested (February high) 99.50-100.00 and interim 101.30 into the mid-March retest of the more significant 102.00-.25 (late-2016/early-2017) congestion. Yet it then settled back temporarily below 100.00-99.50.

Even though there was a late-March retest of 98.37-.00, it had been back up retesting 100.00-99.50 and slightly higher levels after a late April retest of the 99.00 interim congestion area it has now slipped below once again along with the 98.00 area on the current selloff.

As noted above, there is some interim congestion in the 97.00 area, yet with the next major congestion in the 96.00 area it is churning around at present. That is reinforced by a weekly UP Closing Price Reversal from back during the wild early-March selloff and recovery. Next lower support is the 95.00 area congestion with a Tolerance to the 94.65 early March trading low.

Previous and now resurgent COVID-19 concerns were weighing on other DEVELOPED CURRENCIES once again which had the US DOLLAR INDEX back above the 97.00 area until a recent 'risk on' influence from the US EQUITIES rally had it weakening again. However, that weakness has now maintained, likely on concerns over the US COVID-19 problems leaving it below that key March 94.65 trading low.

While there was lower support nearby as the 94.00-93.71 2-year trading low, that is currently being violated (as seen in the weekly chart updated through Friday **https://bit.ly/3gbQkh1**.) There is also the downside Acceleration out of the bottom of the aggressive DOWN Channel since the 102.99 sharp mid-March rally high. While it is reasonable to ask whether the US DOLLAR INDEX might be 'oversold' in the near-term, any full channel escape below the 93.50 level in the direction of the trend (Acceleration) out a channel can typically overrun short-term indications.

While there was interim support below as nearby as 92.50-.24 (26-month trading low) that had held on a couple of tests over the past several weeks, the inability to sustain activity back above the low 94.00 area top of the recently violated congestion has seen it drop below 92.50 again. That reinstates the previous DOWN Acceleration, with the next major support is not until the 91.00-90.50 range (September 2017 through February 2018.).

European currencies had been under pressure again versus the US DOLLAR. **EUR/USD** was under pressure previous early this year due to its still weak economy, the initial response to the COVID-19 spread there took it to 33-month lows below last October's 1.0878 trading low prior to the subsequent sharp recovery.

The EURO was then strengthening very much against the temporarily weak US DOLLAR due to previous 'greenback avoidance'. The US DOLLAR losing its haven bid had seen EUR/USD surge back above 1.0800 and even the more prominent 1.1000 area as well as the heavy 1.1250-00 area. That was the next lower support, yet with the greenback surging once again it was readily violated.

It then failed back below it as well as the interim 1.1100 area and even the more prominent 1.1000-1.0950 area. It was also back below last October's 1.0878 trading low once again. It also weakened below the more prominent historic and recent congestion in the 1.0800 area with a buffer to the weekly chart gap higher from a mid-April 2017 1.0722 weekly Close it weakened below prior to a recent recovery above the 1.1000 area.

Since early April it has seen serial swings between the 1.0800 and 1.1000 areas with it now pushing above the higher end of that range and even the higher 1.1200-50 resistance. Next higher interim resistance is in the 1.1400 area it recently tested and stalled, yet with the major historic congestion resistance not until the 1.1500 area and EUR/USD now weakening back to 1.1200 again on the reinstated 'risk off' psychology.

Of course, the also EURO seemed to be benefitting from the German agreement to participate in that major pan-European COVID-19 relief fund. At €750 billion it far outstrips any individual country rescue package to date. This is the sort of thing they had previously resisted for years, along with the thought of any deficit spending fiscal stimulus.

Yet as noted previous, the recent spending pact concerns of Chancellor Merkel are likely part of recent pressure on the EURO. Yet just as EUR/USD had strengthened from 1.1200 area again on US DOLLAR weakness, it also tested and held there on recent resurgent COVID-19 concerns. However, the degree to which those are more prominent in the US has EUR/USD back up above 1.1400 area and now even the more prominent 1.1500 area.

It is also just now pushing above the 18-month 1.1570 high with next interim resistance at the 1.1815 September 2018 high it had recently pushed somewhat above prior to slipping modestly back below it again until early this week. Much above that there is nothing until the historically prominent 1.2000 area, initially at the 1.1877 one-off June 2010 trading low it has already exceeded, with the more prominent 1.2050-1.2100 congestion above.

GBP/USD had already held up much better against the US DOLLAR than other DEVELOPED CURRENCIES in the wake of the Brexit vote finally confirming its exit from the EU. While failing from 1.3500 again in December as well as back below the interim 1.3200 congestion, it only worked its way gradually into the historically important 1.3000-1.2800 range. Even on the late February US DOLLAR surge, GBP/USD only dropped to a Close near the bottom of that range.

However, the BoE leading the emergency rate cut efforts spooked the POUND bulls, leaving it back below 1.2800. Since then it Closed below 1.2500-1.2450 tin late-April and even the interim 1.2200 area and previous major 1.2000-1.1960 September 2019 3.5 year low.

It was recently even below the October 2016 post-Brexit political crisis 1.1711 35-year trading low prior to the current rebound above it near the 1.2500-1.2450. While it sounds like a long way down, due to the nature of the aggressive 1984-1985 selloff and recovery, next support is not until the 1.1000 area.

Yet even that is also relatively minor congestion from that 1984-1985 swing down into and recovery from the 1.0345 February 1985 all-time low. Thankfully it had rebounded back above the 1.2200 area, even if only stalling back into the 1.2500-1.2450 area previous despite the mid-April very temporary blip above it.

Recent strength above that area has created a new interim resistance at the recent 1.2650 area highs, yet with it weakening again on the BoE expanded accommodation decision. Even as it recently strengthened above 1.2500 again, next interim resistance above the 1.2650 area is as nearby as the 1.2700-50 range, with the more prominent resistance still into that broad range of the 1.2800-1.3000 area.

While recently weakening closer to 1.2200 on the resurgent COVID-19 concerns, those being more prominent in the US had it back up above the 1.2500-1.2450 area since early July. And it is now trading above the major 1.2800-1.3000 range. As that maintains, next resistance reverts to the interim 1.3200 area it is now testing, with more major resistance not until 1.3450-1.3500.

And despite the previous US-China rapprochement on the Phase I trade and tariffs agreement not encouraging much **AUD/USD** strength, it is recovering now on the heavier diminished East Asian COVID-19 impact. That is only as expected, yet it is still from well below the .7000 area held in early-May of last year.

Minor squeezes temporarily back above the .7000 area were only a prelude to slipping more definitively below it last July. Next lower major support was the .6825 area early-2016 10-year trading lows it also slipped below around the same time.

That is important after it slipped below next interim support at .6690-77 in early February on COVID-19 driven weak Chinese economic concerns. The .6500 area was the next support it slipped below along with violating the .6250 area next support. That was the last interim congestion this side of the now also violated .6000 area October 2008 17-year trading low.

The ‘good’ news here was that there is somewhat substantial 1998-2003 congestions at .5720, even if it washed out below temporarily in mid-March (trading low .5510) prior to the recovery back above the .6000 area it is holding back above at present and even exceeding that .6250 area violated support.

Recently trading only somewhat above the. 6500 area after previous slippage below it, the current rally has extended well above it and the hefty .6690-77 congestion. That left the next congestion resistance into the .7000-50 range it is most interesting it only challenged in the wake of strength in the other DEVELOPED CURRENCIES, and had recently slipped back from much nearer the .6800 area.

This is possibly the fallout from the continued confrontation between China and US (and clearly allies like Australia) as well as the resurgent COVID-19 infections in China even as it has pushed above the .6800 area again now the .7000 area once again as well. Next higher congestion reverts back that .7200 area heavy historic resistance it had pushed above prior to recent slippage, yet is slightly above it again at present. Next interim resistance is .7300-50.

USD/JPY was the prima facie example of the extreme mid-February ‘haven’ bid in the US DOLLAR, as the typical fellow ‘haven’ currency YEN came under heavy pressure on the USD/JPY surge above 110.00 for the first time since May 2019, leading to an immediate rally to the prominent 112.00-.50 area into the end of that week.

Yet here as well, once the US DOLLAR came under pressure on its loss of ‘haven’ status due to the COVID-19 spread in the previously safe US, at the end of February it ‘crashed’ back below the 110.00 area to Close into 108.00 again. Yet that did not hold since early March began on weakness that carried below the interim 106.00 area and once again below the very prominent 105.00-104.50 range (39-month trading low with major tests in March 2018, January 2018 and August 2019.)

Next lower congestion was not until the interim 102.50 area that USD/JPY traded below recently prior to and recovering back above the low 105.00 area as well as 108.00 and recently even the 110.00 area once again prior to the current weakness.

Higher resistances remain in the 112.00-.50 and 114.00-.50 areas even if it sagged back below the 108.00 area of late toward 106.00 prior to the previous recovery back above the key historic and recent 108.00 congestion area. Yet it is back below it once again despite the recent nominal return of a ‘risk on’ psychology to US EQUITIES, likely due to COVID-19 secular weakness of the US DOLLAR left it back below 106.00 that it is nominally back below at present.

Next lower support reverts back to the historic 105.00-104.50 area, even if it was temporarily violated back in March. Should that be violated, while there is interim support into 102.50, the next major support is not until the 100.00-99.07 including the major June 2016 6.5 year low.

And **EMERGING CURRENCIES** that had been under pressure had been recovering to some degree in February prior to coming back under pressure. The **SA RAND** has seen **USD/ZAR** overrun 15.40-.50 and even the 15.69 September 2018 high prior to pulling back previous. Even though it sagged all the way to 15.20 in early March, it was back above 15.40-.50 and the 15.69 resistance a week later. Then it surged above the 16.00 and 16.30 next higher congestion resistances all the way into violating the 16.95 resistance in mid-March.

The weak economic outlook caused it to exceed the major January 2016 17.94 all-time high it set back markedly from in the wake of the US rescue package. The recent improved sentiment on US EQUITIES had it back below that Oscillator threshold area into the middle of April.

Yet it then surged well above them, setting up a potential RAND failure after the sharp early April USD/ZAR 19.00 DOWN Closing Price Reversal (CPR) with a Tolerance to the 19.08 high of the previous week. After vigorously testing that resistance in late-April, it is even more critical going forward. There is also the 19.33 all-time high of that DOWN CPR week. It is also of note that the recent sharp slide of USD/ZAR from that 19.00 area only sagged to the very top of the near-term 18.00-17.80 recent congestion support prior to getting the bid back.

As such, the near-term aggressive up trend was not in any way threatened. There was also the recent sharp upsurge in the wake of US EQUITIES previous near-term slide, yet with USD/ZAR finally dropping well back below the 18.00-17.80 area into mid-May after it had previously tested it and held.

This is a further sign of how much central bank and government supports have encouraged a more upbeat outlook, whether that proves to be the case across time. The recent drop below the 17.75 weekly MA-13 left the next short-term congestion support back into the 17.55-.50 range it had recently also slipped below, along with more prominent historic congestion into 17.15-16.90 range from the USD/ZAR early 2016 spike higher.

While recently below that as well, it is of note that it barely reached the next historic interim congestion in the 16.30 area prior to the current rebound (i.e. not nearing heavier support in the 16.00 and 15.70-.60 areas.) It is important to watch how it does after recently crossing back above that prominent historic 17.15-16.90 congestion and reacting back into it for its Close two weeks ago. Still back above it early last week created a critical near-term psychology.

Back below next resistance into the 17.55-.50 range it had Closed above two weeks ago has left it back retesting the 17.15 area (also weekly MA-13 this week.) This leaves the 16.90 area important on a near-term trend view once again.

The RUSSIAN RUBLE had seen **USD/RUB** push above 66.50-67.00 on weak Crude Oil as well (economic weakness driven) prior to dropping back on short-term EQUITIES and CRUDE OIL recovery. Back out above it last week left the bigger resistance not until 69.00-70.00 it began this week pushing sharply above.

And historically there is not much resistance again until the 75.00 area (early 2016 congestion) which it tested into early March prior to pulling back nearer to the interim 71.00 area. Yet here as well the return of economic stresses had seen it rally back up above 75.00 of late on the previous hope for the global economy and (at long last) some reasonably significant Crude Oil improvement on the Russo-Saudi pumping truce.

That said, after recent USD/RUB strength again back above the 75.00 area, it has recently slipped somewhat below it on the Crude Oil stabilization and rally. Next interim support was previous congestion and recent trading lows into the 73.00-72.70 area it had previously violated prior to the recent recovery.

The more major support was still into the 71.00-70.00 area it had recently dropped below along with the next interim congestion into the 68.00 area. Now back above that key lower area left 71.00-70.00 the key higher area it was finally pushing above again after stalling near it on the previous recent rallies. That has led to a recovery back above 73.00-72.70 area it has nominally exceeded once again, with next resistance reverting to the 75.00 area.

Even the previously more resilient MEXICAN PESO saw **USD/MXN** surge above the 20.25 resistance in early March leading to an explosive rally. Here as well PESO weakness continued on the COVID-19 North American impact, with next resistances at 20.50 and 20.65 sharply overrun into mid-March on the way to also violating the 20.96 June 2018 high (also congestion) on the way to surging above the 22.03 January 2017 all-time high as well.

And the return of the economic stresses and weak Crude Oil prices had seen it surge to a new 24.62 all-time high out of mid-March, which had been exceeded on the US rescue package worries leading to another new 25.44 all-time high in late March prior to setting back around the mid-low 23.00 area. That left a weekly DOWN CPR from 24.40 (Tolerance 24.62) as new near-term resistance, yet which was NEGATED on last week's push higher (and Closing above it.)

There was also another round of USD/MXN weakening from the early April 25.76 new all-time high. That left yet another weekly DOWN CPR from 24.96 (Tolerance 25.04) the critical elevated near-term topping signal key resistance after it pushed above that mid-24.00 area.

Much like USD/ZAR stalling from its 19.00 retest, USD/MXN falling back from the 25.00 area critical resistance below the low-24.00 area was a positive PESO sign. Lower support was the recent congestion in the low 23.00 area it neared in early April and had violated by a big margin.

And the recent return of a 'risk on' psychology had it slipping to and even temporarily below the recent 22.30 lower interim congestion since early last month, which it was violating for a test of the 22.00 more prominent lower support area (old January 2017 major high) which remains the key lower support. Below that is the June 21.50 area UP Closing Price Reversal as the next interim support this side of 21.00-20.60. And on current weakness the 22.30 area is reinstated as near-term resistance, with the higher level into the 22.60 area once again even as it retests the 22.00 area.

The TURKISH LIRA had been relatively steady through all of the EMERGING CURRENCY turmoil elsewhere. Yet it has been under pressure since **USD/TRY** held key 5.50-5.45 support and pushed back above 5.65-.60 range along with last July's 5.7871 high from after the central bank governor dismissal. Key resistance at 5.90-5.93 was also exceeded again in January.

USD/TRY even strengthened above the 6.00 area that seemed to point to a retest of interim 6.15 area that was also exceeded on the way to a test of the May 2019 crisis 6.25 area 17-month trading high. Compared to the weakness of other EMERGING CURRENCIES this previously left the LIRA a bastion of stability.

Yet above the 6.25 area since mid-March left the door open to a test of the higher September 2018 6.45-6.55 congestion it had exceeded again prior to the temporary subsequent setback into that area later on in March. Since mid-April it has rallied above extended higher resistances at 6.72 and 6.83. That left the 7.10 area previous 2018 crisis all-time high it has now exceeded.

Next lower support was into that old 6.72 area recently held and which it has now firmed well back above, and next support into that September 2018 6.45-6.55 congestion. It is of note that it had remained stuck only slightly above the 6.83 area for the previous month prior to recently pushing well back above it.

The push above the 7.00 area reinforced the EMERGING CURRENCIES global economic concerns, with the current rally back above its 7.10 area important historic August 2018 previous all-time high and May 2020 congestion has led to the current new 7.2945 all-time high this morning. This is consistent with concerns about how the previous relatively better LIRA performance was driven by government intervention which could not be indefinitely sustained.

Based on the weekly topping line (across the August 2018 and May 2020 highs), there was some weekly topping line resistance into the 7.30 area that was also reinforced by historic weekly Oscillator resistance from 2018 (MA-41 plus 0.8655.) While that moves up to the 7.35 area this week, the next extended weekly Oscillator threshold based on more recent activity is not until the 7.48-7.52 area this week (rising 0.04 per week.)

Back below 7.35 for now seems constructive for the LIRA. Yet any sustained reversal of its recent weakness likely requires USD/TRY to fail back below last week's 7.19 area low.

Reports & Events

While still obviously less relevant (as we have been noting for some time and is most glaringly apparent again at present) on the standard report releases in the midst of more major global trade and political cross currents, the Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the **www.rohr-blog.com** sidebar.

As we have been noting for some time in our research notes, regularly scheduled releases are obviously less relevant in the face of the COVID-19 'macro' factors. That said, there were still some very important economic releases and central bank influences again this week.

Monday kicked off with still very weak Japanese GDP and Industrial Production & Capacity Utilization into a Eurogroup meeting, and a weak US Empire State Manufacturing Index. Tuesday saw RBA Meeting Minutes into an Ecofin meeting in Europe, and only the very strong Housing Starts in the US. Today was a much bigger data day from Asia right into UK, Euro-zone and Canadian inflation figures that were weak on balance into the likely predictably very accommodative FOMC Meeting Minutes in the US.

After not much in Asia Thursday there is quite a bit in Europe along with the ECB Monetary Policy Meeting Accounts and currently always interesting US Weekly Initial and Continuing Jobless Claims. Friday remains very interesting with the global Advance PMIs along with UK and Canadian Retail Sales into US Existing Home Sales.

And due to the vagaries of the COVID-19 volatility, we still maintain our recent classic advice that was fully vindicated this week: Keep those seat belts firmly fastened.
