

## RESEARCH NOTE

Wednesday, November 11, 2020

### Happy Veterans Day, Quick Take, Calendar

We extend our good wishes to all countries celebrating the WWI armistice. That's Veterans Day in the US and the UK and its Commonwealth countries, known as Remembrance Day in Canada and Armistice Day in France. This means markets are closed to one degree or another, with some partial closures as well. That is the case in the US, where cash FOREIGN EXCHANGE and GOVERNMENT BOND markets are closed, but the rest are open.

We also refer you back to Tuesday's 'On the Yin-Yang' research note (repeated below) for the Evolutionary Trend View and considerable market psychology perspective, which is an extension of Monday's 'Happy Equities but Upset Bonds' research note. The latter contains quite a bit of information on not just the Pfizer vaccine trials success, yet also on the successful development of the new mass production technology for mRNA vaccines that has broader implications for future diseases.

[Note: There was a typo in paragraph 9 of the original research note regarding the major US infection surge, citing a new infection rate of over 10,000 per day. That was obviously meant to read 100,000 per day, and has been corrected below.]

The bottom line is the 'macro' psychology has evolved into a seemingly far more durable 'risk on' situation than even into the US election expectations last week Tuesday. This is because the forward view for the US and global economy now can assume a longer term expectation of returning to 'normal' (as opposed to the COVID-19 'new normal', which we have noted never made any sense.)

Market expectations were summarized in our view on the past couple of trading session's intermarket activity. GLOBAL GOVVIES bounced sharply in the wake of the US election Democratic 'Blue Wave' crashing on the rocks of their 'down ticket' (House and Senate) underperformance. Yet even a DECEMBER S&P 500 FUTURE drop of over \$150 from Monday's early extreme new all-time high into Tuesday did not bring any substantial recovery to the GLOBAL GOVVIES. That is after they had dropped below significant trend support on Monday. This is a sign of sustainable 'risk on'.

Yet as the high volatility of the US EQUITIES demonstrates, they are still 'on the yin-yang' for now. This is due to the highly anticipated, yet still very troubling, Fall return of the aggressive COVID-19 pandemic spread in North America and Europe. As noted previous, this is going to cause near term economic drags against the prospect of any real improvement into the middle of next year.

Yet the stock market is classically a 'discounting' mechanism for anticipated economic conditions 6-9 months into the future. The expectation that the vaccines and therapeutics will foment a return to normal by late next summer seems to be what US EQUITIES (and others) along with GLOBAL GOVVIES are 'discounting' for now.

One of the most telling recent comments on the vaccine impact came from the former FDA head Dr. Scott Gottlieb. Being pressed by an interviewer on the issue of even the large number of projected doses into next year not being enough to vaccinate more than possibly 35% of the developed world population, he responded, "*But that will make it 'manageable'.*" It seems the markets are now trending on that basis for a sustainable 'risk on' psychology.

### **Courtesy repeat of Tuesday's 'On the Yin-Yang' research note:**

According to industry legend, when the master financier John Pierpont Morgan (1837-1913) was asked by a bright young passerby what the stock market would do, he responded, "*I believe the market is going to fluctuate.*" One gets the sense that Morgan would be right at home in our current volatile markets.

This is especially apparent in the US EQUITIES, but also other asset classes as well. Before going into a bit more of the background on the cross currents which can drive the sort of extreme volatility the US EQUITIES exhibited on Monday, it is important to consider the Evolutionary Trend View (ETV.)

The great news on the Pfizer/BioNTech vaccine tests showing over 90% efficacy led to a massive US EQUITIES rally from the opening. That led the DECEMBER S&P 500 FUTURE to spike up to a 3,668 new all-time trading high, well above September's 3,587 previous high.

Yet that early September high was also important as the trading high of that week prior to a significant weekly DOWN Closing Price Reversal (CPR.) The DOWN CPR was from the previous week's 3,505 weekly Close (with a Tolerance to that week's 3,510 trading high.)

A major short-term selloff from the 3,668 trading high of over \$100 into Monday's Close and current trading this morning, leaves US EQUITIES 'on the yin-yang'. This likely means further volatility is very likely over the coming days.

Yet after such a sharp rally followed by a relative price implosion after the early Monday high, the proverbial 'burden of proof' reverts back onto the bears to force a selloff below 3,500 area. While some may be right that the early Monday activity was a classical 'blowoff', that does not make it a definitive top.

Within the ETV it is always necessary to monitor the 'evolution' of the trend as the overall swings proceed. In the event, the early September 3,505 DOWN CPR was never confirmed as a 'durable' top, because the further price activity could never break the lower 3,230-00 support, much less lower levels. Fast forward into the current ETV and bears will at the very least need to reinstate the bearish psychology back below the 3,505 area. Otherwise, any holding activity into that area (with a Tolerance to the lower 3,480 congestion) will appear just a retest of that violated resistance area as support.

As noted in Monday's 'Happy Equities but Upset Govvies' research note, this seems part of a major 'sea change' after previous manic shifts in 'risk appetite'. The great Pfizer news seems to have infused a likely far more durable return of a 'risk on' psychology. Regardless of the US EQUITIES sharp selloff late Monday, the GLOBAL GOVVIES are still reflecting the perception that across time (i.e. with a very high degree of anticipation) the US and global economy can reverse the COVID-19 damage.

This is apparent in the lack of any bid returning to the DECEMBER T-NOTE FUTURE after its violation of key 8-month support in the 138-16/-00 range (the lack of downside performance from a March DOWN CPR.) This is also the case for other GLOBAL GOVVIES violating key lower supports. The fact that they are well lower today despite an overall \$150 selloff in the S&P 500 is a key indication.

As the old adage tells us, “*The govvies are the equities smarter older brother.*” That is due to the GLOBAL GOVVIES ability to better reflect the true nature of the anticipation of future economic influences. On the other hand, US EQUITIES can ignore those at times, trading on liquidity, yields and central bank influences.

Therefore, while the full impact of the effective and broadly distributed COVID-19 vaccines and therapeutics will take some time (maybe mid-late 2021) to deliver a dramatic improvement in US and global economies, it is being ‘discounted’ now. However, the near-term path forward in the context of the rampant COVID-19 pandemic spread is the counterpoint to that hopeful expectation which is seemingly the reason there is such a violent market yin-yang at present.

It is the case that the Pfizer vaccine and others and therapeutics will still take months to distribute and take effect. That is right into the major infection surge in the US to more than 100,000 new cases per day. And it is also a dire situation in Europe and the UK. That will depress near-term economic activity through both official government restrictions as well as plain old aversion to group activities.

As such, the operative term on the market anticipation of things improving into some point next year is that ‘very high degree of anticipation’. And just to be clear, we are very hopeful the best expectations for the efficacy of the vaccines and therapeutics will be borne out.

Yet that means quite a bit of bad pandemic news and possibly some erosion of recently much better-than-expected economic data and corporate earnings in the near term. Of course, the latter elements could be significantly countered by any move to finish the long-delayed US government stimulus/relief package in Congress.

Whether that is along the lines of the more robust Democratic spending request or the ‘skinny’ Republican proposals is moot. At this point any relief spending which occurs sooner than not will be a tonic for the US EQUITIES, and likely weigh on global govvies.

However, that is deferred for now due to Trump administration attempts to impugn the current received wisdom that Joe Biden won the election. Republican operatives are inclined to support extended maneuvers to uncover voting fraud despite state election officials (even Republicans) noting that any infraction widespread enough to reverse the election results are highly unlikely. However the uncertainty surrounding that is another aspect of market psychology supporting sustained near-term volatility, likely impacting the US DOLLAR as well.

For much more on the Pfizer COVID-19 vaccine developments and overall impact of the first mass mRNA vaccine development, please see Monday’s research note

### **Market Quick Take**

The FRONT MONTH S&P 500 FUTURE pushing out of the broad higher range top in the 3,030-2,970 area in early June was the key to it surging to the 3,200 area. That was the next meaningful higher resistance with a 3,230 Tolerance at which it failed previously on the rally (as is clear on the weekly chart <https://bit.ly/3eMWhle> updated through Friday, October 30.) Yet it also pushed above that out of late July.

This opened the door to a retest of the February’s 3,397.50 front month future all-time high. And after such a major rally back from the February-March debacle, it was hard to imagine the old February all-time high could prevent the FRONT MONTH S&P 500 FUTURE from at least taking a look above 3,397.50; and that transpired on the late August push above it into the low 3,500 area prior to the major early September trend reversal.

Aside from the sheer magnitude of the selloff in the first week of September, it was important as a technical pattern top. With such a significant rally above the previous week's 3,504.50 Close, the drop well below it established a major DOWN Closing Price Reversal (CPR) with a 3,510 Tolerance. Along with the 3,540 topping line, that was key resistance after a recent sizable recovery from lower support.

The next significant support after it traded below the February 3,397.50 previous all-time high looked like the 3,230-00 range we had previously highlighted as rally resistance into early June. On the early September attempt to stabilize at no worse than the 3,300 area, the market exhibited a couple of less than credible pattern bottoms with key failures in the 3,400 area (see our September 18th research note for a full discussion and Evolutionary Trend View fully annotated chart analysis.)

Yet it held that 3,230-00 area once again. And recently surging back above the 3,400-30 area left a burden of proof on the bears to get the market to fail back below that area. In the meantime, the DECEMBER S&P 500 FUTURE ability to post serial weekly Closes above first 3,505-10 and ultimately the 3,550 area will decide if it is indeed again 'Risk On' Forever. After it recently violated the key 3,380 Tolerance of the 3,400 area (now including weekly MA-9 & MA-13) it also traded below 3,280.

That was important as the Tolerance of the interim 3,330-00 range. Yet it held brief tests of the far more major 3,230-00 area heavy congestion support, and then had an impressive rebound back above 3,300-30 once again on election day and now also 3,400-30 area and the 3,505-10 area as well as 3,550 at the beginning of this week. This is confirmation of our estimation the US election would be a win-win for US equities, and the accelerated bullish influence from positive vaccine news.

The question now is whether it can indeed hold the low 3,500 area (Tolerance to the 3,480 congestion) to see if the early September 3,505 DOWN Closing Price Reversal is being Negated. On classic form, that would open the door to an extended rally to the 3,750-3,800 area prior to becoming 'overbought' once again.

### ***Evolutionary Trend View***

Moving on now to a critical market assessment in the wake of the US EQUITIES pushing further above the 3,200-30 range and their previous February FRONT MONTH S&P 500 FUTURE 3,397.50 all-time high in early September. Even though the rally to new all-time highs was significantly reversed (see above), they held that 3,200-30 range on the reaction and were back up above the 3,400 area once again on a renewed 'risk on' psychology. That has now continued into establishing a new all-time high, which as expected is a major influence on the other asset classes as well.

The **MARCH T-NOTE FUTURE** surging into a new all-time high into mid-March (i.e. shortly prior to its expiration) above the 134-00/-08 summer 2016 previous high was understandable (weekly chart through Monday <https://bit.ly/36fL9ti>.) As we had based our future expectation on its historic weekly Oscillator activity likely extending its rally at least into the 135-16/136-00 area (MA-41 plus 06-00/-16), violated in early March.

Sustained activity above that zone pointed to the next Oscillator resistance into the 138-00/-16 area (MA-41 plus 08-00/-16) it was already testing back then into its parabolic extension to the weekly Oscillator resistance in the 139-16/140-00 area (MA-41 plus 09-16/10-00) into mid-March prior to its sharp setback.

In fact, the sharp selloff later that week created a DOWN Closing Price Reversal (CPR) back below the 138-00 area (Tolerance the previous week's 138-16 high.) That is now resistance which has been repeatedly tested on the initial push above it and again in recent recoveries.

140-08/-24 area was next Oscillator resistance this side of the mid-March 140-24 all-time high (and trading high of that recent DOWN CPR.) Even though the JUNE T-NOTE FUTURE had been under pressure back below that 138-00/-16 area into early April, it more recently pushed back above it despite US EQUITIES strength. This reinforces the NEGATION of that mid-March 138-00/-16 DOWN CPR, which still indicates higher ground to come despite the recent stall into the upper 139-00 area.

The next resistance is at near-term congestion in the 139-00 area it had churned above prior to repeated mild selloffs back in May to test the 138-00/-16 area. And that didn't last very long before the recent next push back above the 139-00 area. Beyond that next resistance is the 140-24 mid-March all-time trading high.

Even though the early June drop back below the 138-00/-16 area left the door open to a test of the overrun mid-2012 previous 135-16/-00 area all-time high, subsequent less upbeat economic indications from the OECD, Fed and the IMF had it rebound back above the 139-00 area.

In the wake of its mid-June recovery, the SEPTEMBER T-NOTE FUTURE was above the key 138-16/-00 range as lower support again, with it recently pushing back above the 139-00 area and finally also above 139-24 recent heavy congestion.

The FRONT MONTH T-NOTE FUTURE has slipped back below previously violated 139-20/-24 heavy congestion from the previous four months. However, the NEGATED DOWN Closing Price Reversal top from early March was in the 138-16/-00 range not revisited in recent trading. While the key weekly Moving Averages are still in the mid 139-00 area, only a failure back below that 138-16/-00 range would reinstate any aggressive downside momentum.

139-20/-24 heavy congestion is reinstated as the next key higher resistance once again. While the SEPTEMBER T-NOTE FUTURE was right back up in that area prior to expiration, the DECEMBER T-NOTE FUTURE at an 8/32nds discount. As such, there was upside ground it needed to make up, and had done so on the rally up to the 139-20/-24 area prior to the recently renewed pressure on the US EQUITIES 'risk on' revival.

Even though it had dropped down from that higher resistance, it had only been back down into the important previous mid-March 138-00/-16 DOWN CPR on previous selloffs outside of very temporary slippage below it on the higher than expected early June US PPI release. That said, it had spent the last eight months in the mid 138-00 to upper 139-00 range. That all changed on Monday's response to the Pfizer-BioNTech announcement of the extreme efficacy of their COVID-19 vaccine. In Monday's research note we also briefly review the importance of the first ever mRNA vaccine. The more upbeat longer term economic outlook leaves next minor support into the upper 136-00 area gap, yet more significant support down into the 135-00/134-16 area.

Similarly, the previous strong sister **BUND FUTURE** had seen the MARCH CONTRACT rally back to fully test and exceed its 177.00-.50 resistance from last summer (weekly chart updated through Monday <https://bit.ly/35gTH45>.) Much above that next resistance was not until 178.50 congestion from back then it hit prior to the June contract expiration, with a DOWN CPR at 179.20 (Tolerance at 179.67 all-time high.)

Yet there was a twist here on the typical very early expiration of the MARCH CONTRACT that Friday with the JUNE BUND FUTURE trading almost 3.00 lower. Once the JUNE BUND FUTURE became front month in March it also dropped below the next lower 173.25-.00 support, and even back below the previously staunch 170.50-.00 NEGATED early November DOWN Break support that had been tested extensively over the winter.

It was a clear sign of how concerned the BUND was about the necessary fresh fiscal largesse necessary to counter the heavy European COVID-19 impact. Next lower support was not until back in the major 168.58-.00 area from during the summer 2016 previous all-time high congestion that it held on the sharp selloff into mid-March prior to the bounce back above the 170.50-.00 area.

The extended weak economic psychology had boosted it back up into the important 173.00-.50 range once again in mid-June prior to renewed weakness. As such, the JUNE BUND FUTURE back above the 173.00-.50 range then dropped back slightly below the more major 170.50-.00 congestion next lower support shortly prior to its expiration.

The early June 'risk-on' psychology had seen JUNE BUND FUTURE drop slightly below the low 170.50-.00 area again. Even with the 3.00 SEPTEMBER BUND FUTURE premium, it was also a bit below the 173.50-.00 area on its early June weekly Close.

Yet the less than encouraging economic data and outlook from both the OECD and the Fed earlier in June saw it surge back above the 173.50-.00 area to retest the low end of 173.00-.50 resistance again. Continued concerns even saw it ramp up into and above 175.00-.50 area that it has maintained as support on all recent selloffs, reinforced by more recent IMF indications.

The next resistance was in the 177.00-.50 area it neared on recent rallies, and temporarily traded above in late July. Yet it fell back below the key 177.00-.50 congestion (which it never managed to post a weekly Close above its early August rally extension.)

Yet the lower key area it had been above for the previous two months is the low end of the 175.50-.00 range, which was the key lower support with a Tolerance to the heavy interim 174.50 area congestion. Yet that was not secure into the SEPTEMBER BUND FUTURE expiration, as the typically large differential of second month pricing was to the downside. As the DECEMBER BUND FUTURE was trading at almost a 3.00 discount to the September contract into expiration, the DECEMBER BUND as the FRONT MONTH below 175.00 saw a further selloff.

Yet while that would point to another likely retest of the 170.50-.00 support with minor interim congestion in the 172.50 area, we had already noted quite a bit would likely depend on the overall path of the US EQUITIES. And the BUND had responded well to the previous US EQUITIES weakness, with the DECEMBER BUND FUTURE inclined to push up for another rally near the 175.00-.50 area in that context prior to coming back under pressure.

Yet it was also nowhere near lower interim 172.50 congestion, leaving the US EQUITIES decision seemingly less of a key driver for the influence here on the expectation of more negative COVID-19 news that will restrain any economic data strength. In fact, its bid had once again carried it up above the 175.00-.50 congestion, as GLOBAL GOVVIES seemed to be defying any 'risk on' US EQUITIES sentiment by maintaining their bid.

Yet it failed short of the 177.00-.50 range resistance, possibly on the previous US election psychology. While that left it retesting the low end of that 175.00-.50 congestion critical support in the near term, it had been sharply reversed on the prominent COVID-19 resurgence.

That all changed on Monday's response to the Pfizer-BioNTech announcement of the extreme efficacy of their COVID-19 vaccine. In Monday's research note we also briefly review the importance of the first ever mRNA vaccine. The more upbeat longer term economic outlook leaves next interim support below the 175.00-.50 congestion into the 173.00-172.50 area, yet more significant support not until down into the 170.50-.00 area once again.

As far the MARCH **GILT FUTURE** was concerned, also at new all-time highs like the T-NOTE saw it overrun the September 2019 135.26 weekly DOWN Closing Price Reversal (Tolerance to 135.87) back in early March. That also overran some historic weekly Oscillator resistance at 137.00-.50 (MA-41 plus 4.00-.50.)

This left the next weekly Oscillator resistance at 139.00-.50 (MA-41 plus 6.00-.50) it had already tested and overran temporarily in early March. And much like the T-NOTE, its selloff into mid-March left a DOWN CPR from the previous week's 139.00 area Close.

The Tolerance of that DOWN CPR is right there as well due to that Close being at the high of the week. Not only did the MARCH GILT FUTURE fall back down into the 137.00 area, but the full point discount in the JUNE GILT FUTURE left it back below the 135.26 violated weekly DOWN Closing Price Reversal support.

That also saw the JUNE GILT FUTURE below the 130.00-.50 FRONT MONTH GILT FUTURE support into next historic low-128.00 congestion it hit temporarily on its sharp mid-March dislocation prior to the major rebound above the mid-low 135.00 area which held as support back into early April.

The weaker May economic expectations had boosted it back above 137.00 area congestion that had held on recent tests, with 139.00 area above that restraining the recent rally prior to the dip back into the 138.00 area. Even though back below the 137.00 area into early June (like weakness elsewhere), the recent 'macro' perspectives from the OECD, Fed and the IMF had seen it push back above it and 138.00 toward the 139.00 area into mid-June,

Yet the concern over BoE expanded QE led it back down from there. However, even the 0.85 discounted SEPTEMBER GILT FUTURE rallied from below the 137.00 area into the June 26<sup>th</sup> June contract expiration, and held it on previous recent setbacks in the face of the US EQUITIES renewed 'risk on' influence, also pushing back up above the 138.00 area that it fell below two weeks ago.

Next support in the 136.00 area was recently violated along with the 135.84 weekly MA-41 it has squeezed back above in recent trading. While next support would have been down in the 135.00-134.50 area, it had squeezed above the 137.00 area again (with the 138.00 and more important 139.00 areas above) prior to the recent return of weakness back below it.

While the September contract remains FRONT MONTH until the 28<sup>th</sup>, it is important to note that the DECEMBER GILT FUTURE at a classical almost full point discount to the FRONT MONTH FUTURE had still pushed up toward the 137.00 area again of late prior to the recent selloff back below the 136.00 area. That left it into the interim 135.00 area support (including the late August 135.26 temporary selloff low) this side of the next support in the 133.00 area.

Yet at present it is pushing up from the 135.00 area once again, as GLOBAL GOVVIES seem to be defying any 'risk on' US EQUITIES sentiment by maintaining their bid. The recent rally extension back above the 136.00 area left the 137.00 area the next level again prior to slipping back below 136.00 again of late toward 135.00 area again.

Much like other GLOBAL GOVVIES, that may have been on the previous US election psychology favoring the ostensibly more profligate Democrats that had overshadowed the prominent COVID-19 resurgence. However, the Democratic 'Blue Wave' failing to achieve control of the US Senate seemed to have tempered fears of more major US government profligacy, saw them rebound.

That all changed on Monday's response to the Pfizer-BioNTech announcement of the extreme efficacy of their COVID-19 vaccine. In Monday's research note we also briefly review the importance of the first ever mRNA vaccine. The more upbeat longer term economic outlook left them below the recent resilient 135.00 support. Next interim support below is the 133.00-132.50 range, yet with more significant support not until down into the 130.50-.00 area.

In **FOREIGN EXCHANGE** the **DEVELOPED CURRENCIES** had also seen massive shifts in the Spring prior to quieting down once again. As noted previous, even though the **US DOLLAR INDEX** had a 'haven' bid into mid-February, it then came under extensive pressure against the other **DEVELOPED CURRENCIES** (including an atypical depression of the other major 'haven' currency **JAPANESE YEN**.)

The problems in the US COVID-19 response had left it under sustained pressure. Yet the concerns about how poorly the other countries might fare under the extended COVID-19 impact had seen a partial 'haven' bid return to the greenback until the recent **US DOLLAR INDEX** stall on its push back above the key 94.00-.30 area. While this was previously likely also at least partially tied to the **US EQUITIES** renewed 'risk on' psychology, there is also the degree to which the US has a more troubling COVID-19 pandemic problem that the rest of much of the world and the sustained Democratic election poll lead fomenting fiscal concerns.

However, even the Democrats 'Blue Wave' dissipating into the middle of last week only saw the **US DOLLAR INDEX** rally back to the top of the 94.00-.30 range prior to dropping back to 92.50-24 once again.

While the volatility in this area was also historically extreme prior to spring stabilization, previous **US DOLLAR INDEX** weakness was not a surprise with COVID-19 is spreading in the previously 'safe' United States. Yet that was reversed on worse impacts elsewhere leading to a wild rally to 103.00 prior to settling back into the 99.00 area.

Firmer US economic data had assisted the **US DOLLAR INDEX** over last summer in finally fully overrunning the mid-upper 97.00 resistance. That inspired the push above the April-May 98.37 area trading highs early last August prior to lapsing back into near-term weakness.

Next levels were the interim 99.00 area, yet with the more prominent area not until the 99.50-100.00 'big penny' historic congestion. After weakening in the end of February it failed back below 98.37-.00 (also important weekly MAs in the upper 97.00 area) on its way to also cracking the 96.50-.00 well-established congestion range support held at the end of last year.

With the previous COVID-19 flight to US safety reversed, it was retesting the longer-term congestion in the 96.00-95.84 area (12-month trading low.) Much below that was the interim congestion into the recently tested 95.00 area it held into mid-March, with the more major 94.00-93.70 area below.

Yet the previous return of more pointed concerns elsewhere had seen it surge back above the 98.37-.00 area, and even above previously tested (February high) 99.50-100.00 and interim 101.30 into the mid-March retest of the more significant 102.00-.25 (late-2016/early-2017) congestion. Yet it then settled back temporarily below 100.00-99.50.

Even though there was a late-March retest of 98.37-.00, it had been back up retesting 100.00-99.50 and slightly higher levels after a late April retest of the 99.00 interim congestion area it has now slipped below once again along with the 98.00 area on its early June selloff.

As noted previous, there was some interim congestion in the 97.00 area, yet with the next major congestion in the 96.00 area it failed below in early July. That was reinforced by a weekly UP Closing Price Reversal from back during the wild early-March selloff and recovery. Next lower support was the 95.00 area congestion with a Tolerance to the 94.65 early March trading low.

It is likely that concerns over the US COVID-19 problems left it below that key March 94.65 trading low. While there was lower key support nearby as the 94.00-93.71 2-year trading low, that was also violated in August (as seen in the weekly chart updated through Monday <https://bit.ly/3nbThSw>.) There was also the downside Acceleration out of the bottom of the aggressive DOWN Channel since the 102.99 sharp mid-March rally high.

While it was very reasonable to ask whether the US DOLLAR INDEX might be 'oversold' in the near-term, any full channel escape below 93.50 level in the direction of the trend (Acceleration) out a channel can overrun short-term indications. While there was interim support below as nearby as 92.50-.24 (26-month trading low) that had held on a couple of tests, its previous inability to sustain activity back above the low 94.00 area top of the recently violated congestion had seen it drop below 92.50 again prior to a previous the late week recovery.

That said, DOWN Acceleration had been reversed on the push above the 94.25 Tolerance of the 94.00 area resistance, also the area of weekly MA-13. That left the door open for a test of at least the 94.65-95.00 next resistance and higher resistances into the 96.00 area and higher prior to the current slippage back below 94.00.

The next lower important interim support is not until the 92.50-.24 area (including the early September UP CPR), with the more major supports not until down in the 91.00-90.50 area and 89.00 area (with due respect for the 90.00 'big penny' only being psychological at this time.)

Which made the recent rallies back up to the 94.30 area critical on the consideration of whether the US EQUITIES 'risk on' rally shakes off recent weakness. However, recently it seemed the Democratic Party poll leads into the election was creating some uncertainty as well on fiscal grounds that saw it retest the top end of that 92.50-.24 range. However, that was sharply reversed on the prominent COVID-19 resurgence.

Yet on Tuesday we noted... "*...weakness of the US Dollar Index (dropping back from the key low-94.00 area*", that also reversed markedly once the 'Blue Wave' became suspect Tuesday evening, with a rally back to almost exactly to 94.30. However, the subsequent understanding that a deadlocked US government may not be good for any necessary reforms brought the greenback under pressure. That may also be on prospects for some form of stimulus/relief being more likely on compromise, even if not the major spend Democrats desire. And the current US DOLLAR INDEX strength seems based only on the JAPANESE YEN weakness rather than any broad retracement of recent secular US DOLLAR weakness.

European currencies had been under pressure again versus the US DOLLAR. **EUR/USD** was under pressure previous early this year due to its still weak economy, the initial response to the COVID-19 spread there took it to 33-month lows below last October's 1.0878 trading low prior to the subsequent sharp recovery. The EURO was then strengthening very much against the temporarily weak US DOLLAR due to previous 'greenback avoidance'.

The US DOLLAR losing its haven bid had seen EUR/USD surge back above 1.0800 and even the more prominent 1.1000 area as well as the heavy 1.1250-00 area. That was the next lower support, yet with the greenback surging once again it was readily violated.

It then failed back below it as well as the interim 1.1100 area and even the more prominent 1.1000-1.0950 area. It was also back below last October's 1.0878 trading low once again. It also weakened below the more prominent historic and recent congestion in the 1.0800 area with a buffer to the weekly chart gap higher from a mid-April 2017 1.0722 weekly Close it weakened below prior to a recent recovery above the 1.1000 area.

Since early April it had seen serial swings between the 1.0800 and 1.1000 areas with it now pushing above the higher end of that range and even the higher 1.1200-50 resistance. Next higher interim resistance is in the 1.1400 area it recently tested and stalled, yet with the major historic congestion resistance not until the 1.1500 area and EUR/USD now weakening back to 1.1200 again on the reinstated 'risk off' psychology.

Of course, the EURO also seemed to be benefitting from the German agreement to participate in that major pan-European COVID-19 relief fund. At €750 billion it far outstrips any individual country rescue package to date. This is the sort of thing they had previously resisted for years, along with the thought of any deficit spending fiscal stimulus.

Yet as noted previous, the recent spending pact concerns of Chancellor Merkel are likely part of recent pressure on the EURO. Yet just as EUR/USD had strengthened from 1.1200 area again on US DOLLAR weakness, it also tested and held there on recent resurgent COVID-19 concerns. However, the degree to which those are more prominent in the US has EUR/USD back up above 1.1400 area and now even the more prominent 1.1500 area.

It also pushed above the 18-month 1.1570 high in late July. The next interim resistance was at the 1.1815 September 2018 high it recently pushed somewhat above prior to slipping back below it again after churning heavily around it in recent trading. Lower interim support reverts to 1.1700 area recent trading lows, which is also the key weekly MA-13 trend indication at present.

While the recent failure below that pointed to a test of at least the 1.1500 area with more major 1.1400 below, the current sustained recovery back above the 1.1700 reinstates it as a key consideration once. Next resistance remains the 1.1815 September 2018 high and the more major 1.2000-1.2100 range last tested into early September.

**GBP/USD** had already held up much better against the US DOLLAR than other DEVELOPED CURRENCIES in the wake of the Brexit vote finally confirming its exit from the EU. While failing from 1.3500 again in December as well as back below the interim 1.3200 congestion, it only worked its way gradually into the historically important 1.3000-1.2800 range.

Even on the late February US DOLLAR surge, GBP/USD only dropped to a Close near the bottom of that range. However, the BoE leading the emergency rate cut efforts spooked the POUND bulls, leaving it back below 1.2800. Since then it Closed below 1.2500-1.2450 in late-April and even the interim 1.2200 area and previous major 1.2000-1.1960 September 2019 3.5 year low.

It was recently even below the October 2016 post-Brexit political crisis 1.1711 35-year trading low prior to the current rebound above it near the 1.2500-1.2450. While it sounds like a long way down, due to the nature of the aggressive 1984-1985 selloff and recovery, next support is not until the 1.1000 area.

Yet even that is also relatively minor congestion from that 1984-1985 swing down into and recovery from the 1.0345 February 1985 all-time low. Thankfully it had rebounded back above the 1.2200 area, even if only stalling back into the 1.2500-1.2450 area.

That was previous despite the mid-April very temporary blip above it. Recent strength above that area had created a new interim resistance at the recent 1.2650 area highs, yet with it weakening again on the BoE expanded accommodation decision. Even as it previously strengthened above 1.2500 again, next interim resistance above the 1.2650 area was as nearby as the 1.2700-50 range, with the more prominent resistance still into that broad range of the 1.2800-1.3000 area.

While weakening closer to 1.2200 on the early Summer resurgent COVID-19 concerns, those being more prominent in the US had it back up above the 1.2500-1.2450 area since early July. And it was recently trading above the major 1.2800-1.3000 range. Yet it had slipped well back into it on the concerns about Johnson government assertions it might choose to exit the European Union without a full Brexit agreement in place by the early part of 2021.

And as it was also below it again on the UK COVID-19 pandemic infection rate surge and renewed restrictions, the potential for a selloff to the lower supports like 1.2500 and below is a distinct possibility if it should weaken below 1.3000-1.2800 again after its recent rally back into that range on US DOLLAR weakness.

While recently back into it again on UK and European COVID-19 concerns, the current secular US DOLLAR weakness is assisting a push above 1.3000 toward the interim 1.3200 congestion once again even as it has weakened back below 1.3000 of late. The 1.2800 low end of the range therefore became more important once again as well, and holding has left back above the 1.3000 area and even somewhat above 1.3200.

And despite the previous US-China rapprochement on the Phase I trade and tariffs agreement not encouraging much **AUD/USD** strength, it is recovering now on the heavier diminished East Asian COVID-19 impact. That is only as expected, yet it is still from well below the .7000 area held in early-May of last year.

Minor squeezes temporarily back above the .7000 area were only a prelude to slipping more definitively below it last July. Next lower major support was the .6825 area early-2016 10-year trading lows it also slipped below around the same time.

That is important after it slipped below next interim support at .6690-77 in early February on COVID-19 driven weak Chinese economic concerns. The .6500 area was the next support it slipped below along with violating the .6250 area next support. That was the last interim congestion this side of the now also violated .6000 area October 2008 17-year trading low.

The 'good' news here was that there is somewhat substantial 1998-2003 congestions at .5720, even if it washed out below temporarily in mid-March (trading low .5510) prior to the recovery back above the .6000 area it is holding back above at present and even exceeding that .6250 area violated support.

Recently trading only somewhat above the .6500 area after previous slippage below it, the current rally has extended well above it and the hefty .6690-77 congestion. That left the next congestion resistance into the .7000-50 range it is most interesting it only challenged in the wake of strength in the other DEVELOPED CURRENCIES, and had recently slipped back from much nearer the .6800 area.

This is possibly the fallout from the continued confrontation between China and US (and clearly allies like Australia) as well as the resurgent COVID-19 infections in China even as it has pushed above the .6800 area again and now the .7000 area once again as well.

Next higher congestion reverts back that .7200 area heavy historic resistance it had recently traded below once again. It is now squeezing back up toward it after dropping toward another test of the .7000 area that was seen as recently as late September. Recent strength was likely on the comparative strength in the Chinese economic performance as well as US DOLLAR concerns, yet with recent global COVID-19 economic concerns weighing it down back near .7000 once again. That held, and current US DOLLAR secular weakness have seen it surge back above .7200 once again.

**USD/JPY** was the prima facie example of the extreme mid-February 'haven' bid in the US DOLLAR, as the typical fellow 'haven' currency YEN came under heavy pressure on the USD/JPY surge above 110.00 for the first time since May 2019, leading to an immediate rally to the prominent 112.00-.50 area into the end of that week.

Yet here as well, once the US DOLLAR came under pressure on its loss of 'haven' status due to the COVID-19 spread in the previously safe US, at the end of February it 'crashed' back below the 110.00 area to Close into 108.00 again.

Yet that did not hold since early March began on weakness that carried below the interim 106.00 area and once again below the very prominent 105.00-104.50 range (39-month trading low with major tests in March 2018, January 2018 and August 2019.)

Next lower congestion was not until the interim 102.50 area that USD/JPY traded below recently prior to and recovering back above the low 105.00 area as well as 108.00 and recently even the 110.00 area once again prior to the current weakness.

The higher resistances remain in the 112.00-.50 and 114.00-.50 areas. Yet after sagging back below the 108.00 area also left it weakening below 106.00, it has been weak once again below that level since early June. Below 106.00 that it was previously churning back above leaves next lower support reverts back to the historic 105.00-104.50 area it had slipped back into again prior to the recent recovery... one of the few areas of US DOLLAR strength.

That is after previously trading below it both in late July and again in mid-September, and after it was also temporarily massively violated back in March. Should that be more fully violated again, while there is interim support into 102.50 it neared on its recent selloff, the next major support is not until the 100.00-99.07 including the major June 2016 6.5 year low.

And **EMERGING CURRENCIES** that had been under pressure had been recovering to some degree in February prior to coming back under pressure. While stronger over the Summer, they were back under pressure on the 'macro' view deteriorating into the COVID-19 'risk off' once again until the recent 'risk on' revival on better data abetted by the secular US DOLLAR weakness. While that was except for the TURKISH LIRA, even that has recovered to some degree on current renewed global 'risk on' psychology creating secular US DOLLAR weakness.

The **SA RAND** has seen **USD/ZAR** overrun 15.40-.50 and even the 15.69 September 2018 high prior to pulling back previous. Even though it sagged all the way to 15.20 in early March, it was back above 15.40-.50 and the 15.69 resistance a week later.

Then it surged above the 16.00 and 16.30 next higher congestion resistances all the way into violating the 16.95 resistance in mid-March. The weak economic outlook caused it to exceed the major January 2016 17.94 all-time high it set back markedly from in the wake of the US rescue package. The recent improved sentiment on US EQUITIES had it back below that Oscillator threshold area into the middle of April.

Yet it then surged well above them, setting up a potential RAND failure after the sharp early April USD/ZAR 19.00 DOWN Closing Price Reversal (CPR) with a Tolerance to the 19.08 high of the previous week. After vigorously testing that resistance in late-April, it is even more critical going forward. There is also the 19.33 all-time high of that DOWN CPR week. It is also of note that the previous sharp slide of USD/ZAR from that 19.00 area only sagged to the very top of the near-term 18.00-17.80 recent congestion support prior to getting the bid back.

As such, the near-term aggressive up trend was not in any way threatened. There was also the previous sharp upsurge in the wake of US EQUITIES previous near-term slide, yet with USD/ZAR finally dropping well back below the 18.00-17.80 area into mid-May after it had previously tested it and held.

This is a further sign of how much central bank and government supports have encouraged a more upbeat outlook, whether that proves to be the case across time. The recent drop below the 17.75 weekly MA-13 left the next short-term congestion support back into the 17.55-.50 range it had recently also slipped below, along with more prominent historic congestion into 17.15-16.90 range from the USD/ZAR early 2016 spike higher.

While recently below that as well, it is of note that it barely reached the next historic interim congestion in the 16.30 area in late July prior to the next rebound (i.e. not nearing heavier support in the 16.00 and 15.70-.60 areas.) It was important to watch how it did after recently crossing back above that prominent historic 17.15-16.90 congestion and failing back below it.

That left the lower interim support into 16.50 (including weekly MA-41) it had slipped back below prior to the recent US DOLLAR recovery. That left the next lower supports into the heavy congestion in the 16.30 area it had slipped below again of late, with the next lower congestion into the 16.00 area it neared in mid-September and from which it has recently recovered back above 16.30 on the more prominent COVID-19 'risk off' psychology. Yet secular US DOLLAR weakness has left it below 16.00, with heavier support into the 15.70 and the 15.50-.40 areas it has recently been down testing.

The RUSSIAN RUBLE had seen **USD/RUB** push above 66.50-67.00 on weak Crude Oil as well (economic weakness driven) prior to dropping back on short-term EQUITIES and CRUDE OIL recovery. Back out above it last week left the bigger resistance not until 69.00-70.00 it began this week pushing sharply above.

And historically there is not much resistance again until the 75.00 area (early 2016 congestion) which it tested into early March prior to pulling back nearer to the interim 71.00 area. Yet here as well the return of economic stresses had seen it rally back up above 75.00 of late on the previous hope for the global economy and (at long last) some reasonably significant Crude Oil improvement on the Russo-Saudi pumping truce.

That said, after recent USD/RUB strength again back above the 75.00 area, it has recently slipped somewhat below it on the Crude Oil stabilization and rally. Next interim support was previous congestion and recent trading lows into the 73.00-72.70 area it had previously violated prior to the recent recovery.

The more major support was still into the 71.00-70.00 area it had recently dropped below along with the next interim congestion into the 68.00 area. Now back above that key lower area left 71.00-70.00 the key higher area it was finally pushing above again after stalling near it on the previous recent rallies.

That has led to a recovery back above 73.00-72.70 area it has nominally exceeded once again, with next resistance reverting to the 75.00 area it has fully recovered above of late (including 75.80) likely on the weaker CRUDE OIL activity.

More major higher resistance was up in the 77.00 area it has also violated of late, with not much above until 80.00 area it stalled into recently prior to the sharp drop slightly back below 77.00. And while failing temporarily on the recent churn back into that range, the resurgent COVID-19 impact on Russia along with weak energy prices had seen it push above 80.00 once again, with next resistance into 81.30 it never quite reached prior to sagging back below 80.00 and even the 77.00 area at present.

Even the previously more resilient MEXICAN PESO saw **USD/MXN** surge above the 20.25 resistance in early March leading to an explosive rally. Here as well PESO weakness continued on the COVID-19 North American impact, with next resistances at 20.50 and 20.65 sharply overrun into mid-March on the way to also violating the 20.96 June 2018 high (also congestion) on the way to surging above the 22.03 January 2017 all-time high as well.

And the return of the economic stresses and weak Crude Oil prices had seen it surge to a new 24.62 all-time high out of mid-March, which had been exceeded on the US rescue package worries leading to another new 25.44 all-time high in late March prior to setting back around the mid-low 23.00 area. That left a weekly DOWN CPR from 24.40 (Tolerance 24.62) as new near-term resistance, yet which was NEGATED on last week's push higher (and Closing above it.)

There was also another round of USD/MXN weakening from the early April 25.76 new all-time high. That left yet another weekly DOWN CPR from 24.96 (Tolerance 25.04) the critical elevated near-term topping signal key resistance after it pushed above that mid-24.00 area. Much like USD/ZAR stalling from its 19.00 retest, USD/MXN falling back from the 25.00 area critical resistance below the low-24.00 area was a positive PESO sign. Lower support was the recent congestion in the low 23.00 area it neared in early April and had violated by a big margin.

And the recent return of a 'risk on' psychology had it slipping to and even temporarily below the recent 22.30 lower interim congestion since early last month, which it was violating for a test of the 22.00 more prominent lower support area (old January 2017 major high) which remains the key lower threshold it has slipped below at present.

And on current weakness the 22.30 area is reinstated as resistance, with the higher level into the 22.60 area once again even as it has failed below the 22.00 area once again. Below that was the June 21.50 area UP Closing Price Reversal as the next interim support it has also failed below, on the way to retesting the top end of the 21.00-20.60 area it has now slipped into again. Much below that broad berth the next support is not until the 20.25 area, including an important 20.30-.10 weekly chart gap from on the way up in March of this year.

However, the COVID-19 influence that saw it back up toward 21.50 has fizzled on a drop back below 21.00 and even the 20.60 low end of that support range. There is now more major support into the 20.00-19.80 significant multiyear congestion not seen since early March, with additional significant congestion as nearby as the 19.65-.50 area.

The TURKISH LIRA had been relatively steady through all of the EMERGING CURRENCY turmoil elsewhere. Yet it has been under pressure since **USD/TRY** held key 5.50-5.45 support and pushed back above 5.65-.60 range along with last July's 5.7871 high from after the central bank governor dismissal. Key resistance at 5.90-5.93 was also exceeded again in January.

USD/TRY even strengthened above the 6.00 area that seemed to point to a retest of interim 6.15 area that was also exceeded on the way to a test of the May 2019 crisis 6.25 area 17-month trading high. Compared to the weakness of other EMERGING CURRENCIES this previously left the LIRA a bastion of stability.

Yet above the 6.25 area since mid-March left the door open to a test of the higher September 2018 6.45-6.55 congestion it had exceeded again prior to the temporary subsequent setback into that area later on in March. Since mid-April it has rallied above extended higher resistances at 6.72 and 6.83. That left the 7.10 area previous 2018 crisis all-time high it has now exceeded.

The push above the 7.00 area reinforced the EMERGING CURRENCIES global economic concerns, with the current rally back above its 7.10 area important historic August 2018 previous all-time high and May 2020 congestion has led to the current new 7.2945 all-time high this morning. This is consistent with concerns about how the previous relatively better LIRA performance was driven by government intervention which could not be indefinitely sustained.

Based on the weekly topping line (across the August 2018 and May 2020 highs), there was some weekly topping line resistance into the 7.30 area that was also reinforced by historic weekly Oscillator resistance from 2018 (MA-41 plus 0.8655.)

As that Oscillator moved up to the 7.60 area of late. It is already well above it with the next extended weekly Oscillator threshold is 7.90-7.95 this week based on recent activity, and finishing last week above it sets a more accelerated rally in motion. As we have noted for several weeks, the risk to the LIRA is that the extreme mid-2018 Oscillator thresholds are not until the 8.65-8.70 area this week, rising to 8.70-.75 next week.

As such, the key weekly Oscillator threshold was very critical for USD/TRY in the context of the previous several week's 7.95 area trading highs, with the push above them two weeks ago signaling a renewed UP 'runaway' phase. That LIRA weakness came even as the other EMERGING CURRENCIES benefited from US DOLLAR weakness, reinforcing the secular nature of that LIRA weakness that was therefore more likely to continue. However, it now appears the renewed global 'risk on' psychology is assisting even the LIRA, as USD/TRY has dropped back to test the 8.00 area, with 7.95 remaining important also as weekly MA-9.

### ***Reports & Events***

While still obviously less relevant (as we have been noting for some time and is most glaringly apparent again at present) on the standard report releases in the midst of more major global trade and political cross currents, the Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the [www.rohr-blog.com](http://www.rohr-blog.com) sidebar.

As we have been noting for some time in our research notes, regularly scheduled releases are obviously less relevant in the face of the COVID-19 'macro' factors. That said, there were still some very important economic releases and central bank influences once again this week.

While we are now ostensibly past the US election decision, there might still be some surprises as well as some still unsettled races. The surprises could come from the Trump administration legal challenges to the final vote counts in some key states, with the other unsettled races leaving the very important balance of power in the Senate in flux all the way into early January. Even beyond all of that, it is a very intense economic reporting and central bank influence week.

Monday kicked off with important economic releases and the next monthly OECD Composite Leading Indicators. Tuesday continued important data like slightly weaker than expected UK Employment and various sentiment indicators. Wednesday sees the early RBNZ interest rate decision and press conference with lighter influences elsewhere due to various holidays in observance of the November 11<sup>th</sup> end of World War I. But then Thursday is a monster day.

That sees not only major data releases, but also the culmination of the Wednesday-Thursday ECB Forum on Central Banking that includes a morning (US time) virtual policy panel with moderator Q&A between ECB's Lagarde, BoE's Bailey and the Fed's Powell. It culminates on Friday with quite a bit more European influence into US PPI and Michigan Sentiment.

And the vagaries of COVID-19 along with extended US election volatility remain. As such, you will not be surprised that we obviously maintain our recent classic advice that has been fully vindicated again over the past couple of weeks: Keep those seat belts firmly fastened.
