

## RESEARCH NOTE

Tuesday, July 13, 2021

### Sub-Bifurcation, Quick Take, Calendar

While there was a bit of another temporary knock on the US EQUITIES from another set of over the top US CPI numbers this morning, that does not seem to have engendered any lasting weakness. See this very timely and extensive Reuters article (<https://reut.rs/3hDxyCY>) dissecting the full extent of the US inflation overshoot.

Is it that markets agree with the Fed that all of this is temporary? Or is it more so that despite the headwinds from the inflation itself (possibly impacting corporate earnings) even prior to any central bank response, the US EQUITIES are continuing to benefit from the TINA (There Is No Alternative) covered extensively of late?

Our view is that it is a bit of both. And on a sheer Evolutionary Trend View, the rapid September S&P 500 future recovery from today's CPI knock (lasting less than 90 minutes) is reflecting still very bullish underpinnings of US EQUITIES. It is of note the post-CPI selloff also only made it down to the higher of this week's 4,355 weekly Oscillator thresholds.

This means it never even came close to that 4,316 overrun UP Runaway Gap Objective. As noted again in Monday's 'On the Cusp of Upside Acceleration' research note (repeated below for your access), that points to a more extensive rally in the near-term to above the 4,400 area.

The other aspect becoming more prominent in the COVID-19 Delta variant plagued world is the 'sub-bifurcation' of the weakening of the 'risk-on' psychology. It is the case now that some countries have both the Delta variant weakness which had led to the US EQUITIES benefitting from that TINA psychology, and also individual 'country' considerations.

That is relevant for South Africa that is now adding political violence to its already burgeoning COVID-19 problems (see this Reuters article <https://reut.rs/3rb0e9F>.) As such, it is not much of a secret why the RAND weakness has seen USD/ZAR strengthen above recent and historic 14.40-.50 congestion. And that is while the still churning RUSSIAN RUBLE and MEXICAN PESO have strengthened on the back of CRUDE OIL mostly holding its bid despite recent OPEC disarray.

In fact, energy price strength was a component of the US CPI overshoot. And the Delta variant is also likely part of weakness of other DEVELOPED CURRENCIES against a greenback that has seen the US DOLLAR INDEX once again pushing above the 92.00-.30 area.

If there were not other complicating factors, it would be easy to see this split even in the trends of various emerging currencies and strengthening of the US dollar as a vaccination 'haves' and 'have nots'. Yet the other factors now point to the degree to which the individual 'country' cross currents are having as decisive an impact as that major vaccination consideration, which does remain prominent.

As such, while the initial recent bifurcation was on the US EQUITIES maintaining strength in the face of other 'risk-on' instrument trends weakening, in addition to that TINA factor there are now individual 'country' influences which are causing divergence among the weaker vehicles. This 'sub-bifurcation' is likely to remain prominent in a current geopolitical situation that is going to remain unsettled.

**Courtesy Repeat of Monday's 'On the Cusp of Upside Acceleration' research note**

As noted in Friday's 'Wheels Back on the Bus' ALERT!!, Thursday's combined negative factors that highlighted the long-expected COVID-19 Delta variant negative implications for the global economic reopening were not enough to keep US EQUITIES under pressure. This is especially interesting in the context of the other 'risk-on' indications remaining under some pressure.

There is the renewed pressure on the DEVELOPED CURRENCIES and even more so EMERGING CURRENCIES against the US DOLLAR. GLOBAL GOVVIES also getting their bid back to a limited degree after their modest selloff late last week in the wake of what had been a major midweek surge. Not much sign of 'risk-on' there, with the global Delta variant impact likely the cause, with the US somewhat immune.

It was especially telling (as noted Thursday morning) the FRONT MONTH S&P 500 FUTURE peak had been only somewhat above the higher 4,316 Objective 4,021-15 of the early April UP Runaway Gap. Similar activity slightly above the lower of the UP Runaway Gap 4,193 Objectives back into early May led to a major correction back below it.

It also took six weeks of churn from nearly a test of that 4,021-15 UP Runaway Gap to fully exceed the low-mid 4,200 area three weeks ago. Yet there are good Evolutionary Trend View reasons for the current situation to be more bullish.

In the first instance, overrunning that lower 4,193 Objective left the higher 4,316 Objective as a higher resistance. That is now not the case with the reaction and rapid recovery above the 4,316 area. Also as noted previous, "*Technical Objectives are funny things.*" On one hand UP Objectives are targets which can often act as resistance from which markets at least react to some degree in the near-term. That was the case back in early May through late June.

On the other hand, they are much like other higher resistances in a bull market, which can act as support once they are overrun. This relates to the historic bull trend analysis (rhetorical) question, "*When is a ceiling a floor?*"

Answer: once it is exceeded to any degree. That shifts the current sense of *déjà vu* more so toward the recent substantial weekly Close above the lower 4,193 UP Objective than anything seen since it was originally traded slightly above in early May.

As also noted previous, "*This once again opens the door to more aggressive extension of the September S&P 500 future up trend, especially now that it has shaken off extended US and especially global impact of COVID-19 Delta variant.*"

The higher weekly Oscillator thresholds into 4,330 and 4,355 this week." The S&P 500 ability to Close last week marginally above those levels puts more of a burden of proof on the bears. They need to create at least a stall into the 4,355 area once again, and overall weakness back below 4,316 or suffer a further rally. That leads to the follow-on question of just how much further US EQUITIES might strengthen if the SEPTEMBER S&P 500 FUTURE can indeed sustain activity above the 4,316 higher of the two Runaway Gap Objectives? Well, the next Oscillator resistances based on last December's trend extensions are into 4,425 and 4,455 this week, and they are still rising \$25 per week on the back of weekly MA-41.

That reinforces the current bifurcated 'risk-on' psychology where much of the rest of the world might be suffering worse consequences while the US EQUITIES continue to attract investment. This would be the extension of the previously noted TINA effect (There Is No Alternative.)

And that might be reasonable with mostly the US South and Southeast more vulnerable due to lack of vaccinations. Yet even that US outperformance relies to some degree on the continued largesse of central banks.

However, that is now more likely to be sustained in the context of the Delta variant predations. Is anyone still positing that there will be a withdrawal of central bank accommodation in the same way as briefly topical in the wake of the June 16<sup>th</sup> FOMC announcements and Chair Powell's press conference.

In fact, it is just the opposite. Last Friday the PBoC eased its RRR (bank reserve requirement), as discussed in Friday's Reuters article (<https://reut.rs/3r5pAWt>) on the need to counter its slowing economy. That might be tied into fear over Delta variant spread impeding export activity in key ports (as also discussed previous.)

After recent signs the Fed and ECB remain committed to major accommodation, this week sees a BoE Statement and Minutes along with the Financial Stability Report (Tuesday); Wednesday's RBNZ rate decision and statement followed by the same from BoC with Governor Macklem's press conference; that is followed by Fed Chair Powell's semiannual House Monetary Policy testimony and the Fed Beige Book. Thursday brings Powell's Senate testimony into Friday's BoJ rate decision and statement followed Governor Kuroda's press conference.

In the evolved context of the Delta variant impact, are there any bets out there that any of those are going to bring central bank accommodation withdrawal? While we might end up surprised, we think not. The final piece of the accelerated bull trend puzzle already came this morning in the form of OECD Composite Leading Indicators (CLIs <https://bit.ly/3i4iOw0> for our mildly marked-up version.)

It is important to note again that OECD takes a conservative six month forward view, which allows a two month lag in its data analysis to ensure the indications are sound. Fair enough that this might leave it a bit behind on incorporating key influences like the recent rapid spread of the Delta variant. Their recent CLI release content has even noted, "...*persisting uncertainties might result in higher than usual fluctuations in the CLI and its components.*" Very important.

Yet the title and statistical thrust of this morning's release is "*CLIs continue to expand steadily.*" Once again noting this may end up being misguided, it would indicate a four month forward view that the developed and emerging economies will continue to benefit from the overall reopening, with the only negative note being, "... *whereas it continues to signal slowing growth in Brazil.*" As that is based on almost total failure to address COVID-19 even prior to the Delta variant, this is not a global concern with even indications for India being 'stable growth'.

As such, with central bank accommodation likely to continue in full bloom, and Delta variant restrictions hitting harder outside the US, the TINA psychology is likely to continue. That could easily drive a positive US EQUITIES psychology even if there is less than great economic data (of which there is much) and/or early corporate earnings this week while other risk assets suffer to some degree.

### **Courtesy Repeat of Monday's Quick Take**

Overrunning the previous 3,960 area JUNE S&P 500 FUTURE (front month since March 19th) resistance into the very beginning of April on the Good Friday strong US Employment report pushed it up into higher 4,010 and 4,035 resistances.

The following Monday there was a key 4,015-21 UP Runaway Gap (as annotated on the weekly chart (<https://bit.ly/3xpdZ7c> updated through Friday), where the Objectives are 4,193 with a higher one not until 4,316. As such, whether a push generally above 4,200 could be maintained was a key indication on that front.

It is also the case there is an early-April weekly Oscillator threshold into 4,230 on the back of a \$25/week rise in weekly MA-41. It appears the market anticipated this previous by leaving a 4,211 new all-time trading high the previous week (when that was going to be the Oscillator threshold into early April.) This made that level that much more critical a technical threshold on any attempt to extend the rally, and it was overrun despite the weak April Employment report.

A really interesting part of the overall equation is whether generally overrunning the 4,200 area (including that lower 4,193 Objective), just means a likely test of the higher (weekly Chart) 4,316 Runaway Gap Objective? Yet JUNE S&P 500 FUTURE pushing back above the previously tested lower early April UP Runaway Gap 4,193 (daily chart) Objective seemed to speak of it being ready to extend the rally to the higher 4,316 (weekly chart) Objective.

The question on the recent downside reaction was whether SEPTEMBER S&P 500 FUTURE (\$10 discount to expiring June contract) could re-establish upside momentum back above the 4,200 area from its weakness below the 4,175 Tolerance two weeks ago. It was necessary to make sure Powell provided comfort on inflation and Fed action in his testimony last Tuesday.

That is exactly what transpired. That left the 4,200 area support once again if there was any setback from around the old mid-May 4,238 all-time high. Yet instead it churned above the Immediate higher resistance at the previous week's 4,246 weekly DOWN Closing Price Reversal (CPR with 4,249 Tolerance.) The new mid-June 4,267.50 all-time high (part of the DOWN CPR) being exceeded in mid-June for another new all-time high clearly Negated that topping signal.

It is now the case that the weekly Oscillator thresholds are 4,330 and 4,355 this week, which were Closed above at the end of last week. Even though there was a reaction last week below back to the lower of those two thresholds as well as the 4,316 higher weekly Runaway Gap Objective, the recovery to Close back above them is a resilient sign. Those will once again be important for this week's Close, as any push above them will point to the potential to extend the bull trend to the higher Oscillator thresholds (from December) at 4,425 and 4.455 this week.

***Courtesy Repeat of Last Wednesday's Evolutionary Trend View  
[Analysis and Charts to be updated after Wednesday's important early indications]***

There was a renewed 'risk-on' psychology into the previous US EQUITIES early April all-time high near the 4,000 area, which was a sustained major influence back into 'risk on' psychology spreading into FOREIGN EXCHANGE as most tellingly reflected in EMERGING CURRENCIES. The prospect of further US government stimulus/relief has created a psychology where the GLOBAL GOVVIES had reverted to overall weakness to a greater degree than seen during anything previous since the last bear market.

Yet they are now recovering to a goodly degree on the central bank assurances that any inflation will be transitory and possibly over the COVID-19 Delta variant concerns. While the March US NFP release along with other 'good' news turned out to actually be supportive of US EQUITIES (rather than a drover for any Fed tightening), the weaker April NFP and other data along with higher inflation was not playing well after the US EQUITIES test of higher resistance.

However, the JUNE S&P 500 FUTURE recovery back above the 4,100-20 area after nearing the early April UP Runaway Gap in the 4,021-15 range was a positive sign. The question then (after the substantial mid-May correction) was whether it could also overrun the 4,238 all-time high, as had recently transpired prior to the return of a bout of 'Fed Dread'.

Yet that FOMC influenced selloff vigorously tested the proposition of this remaining a 'risk-on' psychology into lower supports, and it survived. That was substantially reinforced by both the subsequent Chair Powell pandemic response testimony, and (as noted) the more mixed yet still positive nature of recent economic releases. It will not be interesting to see if the US EQUITIES into new all-time highs can restore any general 'risk-on' psychology, or a bifurcated trend psychology will continue on problems elsewhere.

The **FRONT MONTH T-NOTE FUTURE** slipped back below previously violated 139-20/-24 heavy congestion from the previous four months in early October (as apparent on the weekly chart through Friday, July 2<sup>nd</sup> <https://bit.ly/3ysqBub>.) However, the NEGATED DOWN Closing Price Reversal top from early March was in the 138-16/-00 range not revisited until recent trading. While the key weekly Moving Averages are still in the mid 139-00 area, only the failure back below that 138-16/-00 range reinstated the downside momentum.

That had changed on the early November response to the Pfizer-BioNTech announcement of the extreme efficacy of their COVID-19 vaccine. In last our Monday November 9<sup>th</sup> research note we also briefly reviewed the importance of the first ever mRNA vaccine.

The more upbeat longer term US economic outlook left the next minor support below the 138-16/-00 range into the 136-24 weekly area gap, with significant support in 135-00/134-16 area. While the 136-16 classical quarter point Tolerance of that 136-24 weekly area gap seemed to be violated on the weakness into mid-January that was reversed on the following week's ratchet back above 136-16, yet with the market back down testing those areas last week. Violating it from the opening last week opened the door to a test of major 135-00/134-16 historic support.

That is reinforced by the broader price history showing mid-low 135-00 congestion around the mid-2012 previous all-time high in addition to the more recent 134-16 area. While that was significantly violated last week, it never got very near the next historic support in the mid-low 132-00 area prior to rebounding.

Failing back up to the mid 134-00 area on recent rallies leaves that as resistance on a sign they were likely headed lower. While March contract had not really challenged the mid-low 132-00 area support, the discounted JUNE T-NOTE FUTURE was only back to trading somewhat above it. The next key decision into mid-low 132-00 area was the March contract expiration last week Monday after the JUNE T-NOTE FUTURE failure on the rally into that area.

Even as it recovered then, the bounce back above that area had failed again, with the lower support still down into the interim 130-00 area, and major support not until 128-00 area (2019-2020 congestion.) Yet the recent sanguine Fed attitude along with COVID-19 Delta variant concerns seemed to be supporting JUNE T-NOTE FUTURE in its recovery back above 132-00. That opened the door to the retest of the historically prominent 134-00 area seen of late.

However, the recent quarterly expiration saw the SEPTEMBER T-NOTE at a typical full point discount, even if it recovered nicely from recent activity back below the 132-00 area once again on the FOMC fears. While that should provide comfort to the bears, it was also a risk they could rally to retest the 134-00 area if they did not remain below 132-00. That recovery has transpired in the context of the recent COVID-19 Delta variant spread, with a recovery nearer 134-00.

Similarly, the previous strong sister **BUND FUTURE** has reversed into the weak sister for quite some time. This is likely due to its yield coming up from negative ground, despite the fact that the US economic data has been that much stronger. With as accommodative a central bank as the Fed, there is also matter of the inflation concerns being that much greater if it turns out to be less transitory than the central banks are currently hoping.

Looking back, the GLOBAL GOVVIES story on further near-term late-2020 economic weakness was reflected in Europe as the MARCH BUND FUTURE 2.30 premium to DECEMBER BUND FUTURE on a typically early expiration. That left it temporarily back above the very prominent 177.00-.50 congestion full year high (as seen in the weekly chart updated through Friday, July 2<sup>nd</sup> <https://bit.ly/3hKhSwP>.) Yet that was the 'last hurrah' of the bull trend prior to the COVID-19 situation improving, and the attendant better economic expectations.

After that it fell back quite a bit from above the 178.01 area, with the push at that time for much more Euro-zone stimulus leaving it below the 177.50-.00 support once again. It had been violated several times since mid-January, with the market back below it despite previous temporary recoveries. Then below next major support at the 175.00-.50 congestion, it also vigorously retested the 173.00-172.50 congestion into early March.

While the MARCH BUND FUTURE remained above it, as expected it was a bit demoralizing that the JUNE BUND FUTURE was so far below the 173.00-172.50 congestion when it became front month future. That left it more so poised to retest the 170.50-169.75 area congestion that had reached prior to the current recovery rally, with the far more major lower recent and historic congestion in the 168.86-.00 area from the summer 2016 previous all-time high.

However, it was more important on the recent recovery whether it could once again sustain activity back above the 173.00-172.50 congestion. Yet after only rallying into that area on the recent general GLOBAL GOVVIES recovery, this current weak sister had been back under pressure toward 170.50-169.75 area congestion on stronger European inflation indications despite rallies on central banker assurances regarding inflation.

Even its recent recovery from temporary slippage below 170.50 left it only up into the existing 173.00-172.50 congestion once again. While that leaves a long way back down to the key recently tested 170.50-169.75 area, even after fading from the contrarian FOMC bounce it was only somewhat back below that 173.00-172.50 congestion. And that lack of any downside momentum left it hanging around the low end of that 173.00-172.50 congestion of late, with a recovery back above 174.00 at present looking more so like a retest of the 175.00-.50 area is possible under the influence of the recent COVID-19 Delta variant spread.

As the co-downside leader the **MARCH GILT FUTURE** (possibly on the inflationary implications of the Brexit break with the EU) was already failing somewhat below major 130-00 congestion. That was also with the typical full point discount in the **JUNE GILT FUTURE**.

That left next support into the mid-low 128.00 area it was recently below prior to rebounding. Even though back above it once again, it remained vulnerable along with the rest of the GLOBAL GOVVIES. If it should slide further, the next major supports are not until the 126.50 and 125.50-.00 areas.

Yet central banker assurances inflation will be transitory had it recently rallying back into the upper 128.00 area of late. While the prominent resistance remains in that 130.50-.00 range congestion (violated previous 22-month trading lows), weekly chart congestion, MA-13 and the gap down from the March contract expiration all point to resistance in the low-mid 129.00 area into which it has indeed stalled.

And the GILT FUTURE expiration sees the opposite picture from the premium in SEPTEMBER BUND FUTURE. The **SEPTEMBER GILT FUTURE** was actually a typical full point below the June contract which expired on Monday. While it was recently back down below the 128.00 area, we ascribed this to the economic differential between the previously fully reopened UK economy versus some residual drags in Europe. While recently only modestly back above the 128.00 area, the current rally under the influence of recent UK COVID-19 Delta variant spread has it back up closer to the 130.50-.00 range.

In **FOREIGN EXCHANGE** the **DEVELOPED CURRENCIES** had also seen massive shifts in the Spring of 2020 prior to quieting down once again. As noted extensively throughout the year, even though the **US DOLLAR INDEX** had a 'haven' bid into mid-February 2020, it then came under extensive pressure against the other **DEVELOPED CURRENCIES**.

The problems in the US COVID-19 response had left it under sustained pressure. Yet the concerns about how poorly the other countries might fare under the extended COVID-19 impact had seen a partial 'haven' bid return to the greenback until the **US DOLLAR INDEX** stall on its late September temporary push above the key 94.00-.30 area.

While this was previously likely also at least partially tied to the **US EQUITIES** renewed 'risk on' psychology, there is also the degree to which the US has a more troubling COVID-19 pandemic problem than the rest of much of the world, and the Democratic presidential election victory fomenting fiscal concerns.

It is of note that even the Democrats 'Blue Wave' psychology dissipating into the middle of the week after the US election only saw **US DOLLAR INDEX** rally back to the top of the 94.00-.30 range prior to dropping repeatedly back to the 92.50-24 range once again. As that was violated in late November, the Evolutionary Trend View for the greenback was a continued down trend even though it had already tested lower support and temporarily rebounded into early February.

However, the subsequent yield escalation created more of a 'risk off' psychology had restored the bid to the greenback. Whether that is merely a 'haven' bid or a reflection of a better US economy driving anticipation of premium US interest rates is moot.

In the event the **US DOLLAR INDEX** strength above the 91.00-.23 resistance pointed to higher levels, which had seen it overrun the more major 92.00-.30 area and even the higher 92.75-.85 area that it fully weakened from back below along with 92.30-.00.

In fact, **DEVELOPED CURRENCIES** exhibiting more strength had the **US DOLLAR INDEX** failing the 91.70 Tolerance of the 92.30-.00 range, and dropping below the 91.00-90.50 congestion. Even though it failed back up into the low end of it on the weakening of the 'risk-on' psychology, it has now pushed back above that 92.00-.30 area with higher interim resistances in the 92.60 and 93.30-.40 areas.

**US DOLLAR INDEX** inability to sustain activity back above the low 94.00 area top of the violated historic congestion had seen it drop below 92.50-.24 in late November. The more major supports were down in the 91.00-90.50 area tested and held since early December prior to being violated (as evident on the weekly chart from Friday, July 2<sup>nd</sup> <https://bit.ly/3hk7ZqD>.)

As the 90.00 'big penny' is only psychological at this time, after 91.00-90.50 was violated the next lower support was not until the 89.50-.00 area already barely being tested again (after the January test) in recent trading with the 88.25 6-year low below that.

That said, the recovery from the 89.50-.00 area had carried up in February into the high end of the 91.00-90.50 area. That said, the December rally failures back up at the top of that area had a Tolerance to the early December 91.23 trading high.

Strength above the 91.00-.23 resistance pointed to higher levels, yet with it stalling into the violated September 92.30 UP Closing Price Reversal that had held until late-November. The selloff at that time from the 92.50 trading high created a fresh DOWN Closing Price Reversal from the previous week's 91.98 Close (Tolerance of that week's 92.19 high.)

That had been Negated by the rally to the new high for that rally into early April. Yet the subsequent slide back below 92.85-.75 on DEVELOPED CURRENCIES exhibiting more strength had the US DOLLAR INDEX failing the 91.70 Tolerance of the 92.30-.00 range, and dropping into the 91.00-90.50 congestion prior to recovering temporarily up above the top of that range this week prior to slight slippage once again.

After it has failed to remain out above the 91.00-.23 range in recent trading, next lower support in the 91.00-90.50 area was violated prior to the recent squeeze back up above that area. That still left historic 89.50-.00 area support tested during December through February and just missed in late May as the lower support.

Yet in the wake of FOMC moving to a seemingly more aggressive tightening, it was back into 92.30-.00 area once again, which it has recently overrun. While the recent focus was back on 91.00-.50 area (including weekly MA-41) that it could not weaken back below of late, the higher interim resistances above the 92.00-.30 range are into the already violated 92.60 and the next congestion in the 93.30-.40 area (including the March 93.43 8-month trading high.)

With **EUR/USD** below 1.2000 again, there seemed to be more of a 'risk off' psychology again into early March, which was then independent of the strength of EMERGING CURRENCIES. Lower supports were back down into those 1.1815 and 1.1700 areas. That reinforced the potential for more US DOLLAR strength. The next lower EUR/USD support into 1.1815 had been violated in late March, with next support into the 1.1700 area subsequently tested prior its subsequent rapid push back above the 1.1800 area.

That was extended as EUR/USD rallied above 1.2000 again, and even churned above the top of the 1.2000-1.2100 range prior to temporary slippage back below the top end of that range in recent trading. The next significant resistance above is back into the recently tested 1.2200-50 area at the bottom of the early 2018 major range, with next resistances above into the 1.2400 area interim 2018 congestion, and 1.2550 top of that range.

Yet in the wake of FOMC moving to a seemingly more aggressive tightening (now refuted), it was back below 1.2000-1.2100 range with 1.1900 area interim support being violated overall on the way to the current weakness below the 1.1815 interim support. That leaves the 1.1700 area more major lower support, which correlates well with the US DOLLAR INDEX 93.30-.40 area. Much below that the next more major support is in the 1.1600 area.

**GBP/USD** had already held up much better against the US DOLLAR than other DEVELOPED CURRENCIES in the wake of the Brexit vote finally confirming its exit from the EU. While failing from 1.3500 again in early December, once it recovered the next resistance was not until the 1.3600-50 range it had rallied to in the wake of the Brexit agreement prior to reacting back down toward the 1.3500 area in January.

Next interim resistance was as nearby as the 1.3750-1.3800 area it exceeded into early February, and loosely held on the subsequent selloff. While this might be in part due to the higher UK interest rates, it is interesting to see how it has evolved in the context of recent US DOLLAR weakness assisting in pushing it above major 1.4000 area congestion since mid-May. That has held despite any minor US DOLLAR bounces, also now including weekly MA-9 and MA-13 trend supports.

The next resistances are not until the interim low-1.4200 area it recently tested prior to slipping somewhat back below it, and the more major 1.4350-76 congestion that includes the April 2018 nearly five year trading high.

Yet in the wake of FOMC moving to a seemingly more aggressive tightening (now refuted), it is back below the 1.4000 area congestion with 1.3750-1.3800 area next support that has been recently tested and held. That has a Tolerance down to the hefty March-April 1.3670 area 5-month pullback lows congestion.

The **AUD/USD** early-November through December surge back above .7200, .7350-.7400 congestion as well as interim .7500 area was a strong sigh that led to temporary strength even above the .7650-.7700 resistance the subsequently fizzled. The next interim resistance was as nearby as the recently exceeded .7800 area it was churning around prior to the resumption of recent weakness. That left lower supports back into the interim .7500 area it previously dipped modestly below and is sagging below again at present. The key lower supports are the as yet untested congestion in the .7350-.7400 area and the .7200 area once again.

**USD/JPY** was the prima facie example of the extreme mid-February 2020 'haven' bid in the US DOLLAR, as the typical fellow 'haven' currency YEN came under heavy pressure on the USD/JPY surge above 110.00 for the first time since May 2019, leading to an immediate rally to the prominent 112.00-.50 area into the end of that week.

Yet here as well, once the US DOLLAR came under pressure on its loss of 'haven' status due to the COVID-19 spread in the previously safe US, at the end of February it 'crashed' back below the 110.00 area to Close into 108.00 again. Yet that did not hold since early March began on weakness that carried below the interim 106.00 area and once again below the 105.00-104.50 range (39-month trading low with major tests in March 2018, January 2018 and August 2019.)

On recent form it had been previously churning below 105.00-104.50 as recently as January prior to pushing aggressively back above both 106.00 and 108.00 into early March. That it was above both 106.00 and even 108.00 despite US DOLLAR strength is in line with the strength of other DEVELOPED CURRENCIES, and is thereby another 'risk-on' indication.

The bid leaving the other 'haven' currency reinforced the previous secular US DOLLAR weakness on the violation of higher USD/JPY resistance into 110.00 being temporarily violated into early April prior to weakening back down to hold a test of the 108.00 area. Yet that lack of any 'haven' bid is once again reflected in USD/JPY stabilizing back up well above the 110.00 area, which runs counter to any shift to a 'risk-off' psychology on the lack of a 'haven' bid in the alternate 'haven' currency.

While other 'risk-on' indications have weakened of late, USD/JPY had remained strong above 110.00 up nearer 112.00-.50. That signaled a lack of full 'haven' status, yet with USD/JPY now weakening back toward 110.00 in a sign that may be reversing in under the influence of the COVID-19 Delta variant global spread outside the US.

And **EMERGING CURRENCIES** that had been under pressure had been recovering to some degree last February prior to coming back under pressure. While stronger over the Summer, they were back under pressure on the 'macro' view deteriorating into the COVID-19 'risk off' again until a previous 'risk on' revival on US DOLLAR weakness that then reversed.

While that was previously except for the TURKISH LIRA, even that had recovered to a goodly degree on recent renewed global 'risk on' psychology creating secular US DOLLAR weakness, even if that has reversed a bit on higher US yields of late.

That contrarian US DOLLAR rally in the wake of the ostensibly more profligate Democratic regime expectations had left all of the EMERGING CURRENCIES back under some pressure into the early part of the year. While that had substantially reversed over subsequent trading, it was back a bit again on the recent weakening of the 'risk on' psychology and the evolving sentiment focused on the recent GLOBAL GOVVIES yield escalation.

However, even as the GLOBAL GOVVIES weakened again in March trading prior to their April recovery, EMERGING CURRENCIES resilience spoke of some degree of global 'risk appetite' being maintained, and will continue to be a key indication. This was apparent during the sharp mid-May US EQUITIES downside reaction, where the EMERGING CURRENCIES managed to only react a bit in their overall bull trends, and had strengthened again prior to the latest FOMC shift to a possibly more aggressive stance.

Yet the question must be whether that is on the sheer interest rate differential back into the US DOLLAR, or is it over concerns the global 'risk-on' reopening is threatened by any early shift to a less accommodative Fed policy? As noted of late, it seems the more telling issue is just how damaging the rapidly spreading COVID-19 Delta variant might be within the cross currents, and that is now clearly the more telling influence.

**SA RAND** had seen **USD/ZAR** failing in early April on renewed 'risk on' psychology violating the next interim support in the 14.70 area (part of the major range from late-2018 through early-2020), even if there was more major support into the 14.50-.45 area it had tested and held back in December through February. While the previous US DOLLAR rallies had seen USD/ZAR ratchet back above the 15.00 area to vigorously test the 15.40-.50 range again, it ultimately reverted to weakness.

That left 14.70 area (in the overall major range from late-2018 through early-2020) next support that had been violated more completely in late March. While that also opened the door for a test of more major support into 14.50-.45 area seen in both December and February, only on the mid-April weakness was that area violated on a weekly Close.

Back below the 14.50-.45 area again overall left USD/ZAR nearer to the 14.00 area, and the prominent historic congestion into the upper 13.00s (including the very important 13.81 July 2019 26-month trading low.)

A new round of weakness in late April set in motion to a new 27-month trading low below the July 2019 13.81 trading low. That left the next interim support at 13.55-.50 which was temporarily overrun into early June, and the 13.23 February 2019 33-month trading low as the next major level that was not quite reached. Yet in the wake of FOMC moving to a seemingly more aggressive tightening, it was back above the 13.80 and 14.00 areas, with next interim resistance into recent 14.20 congestion it also pushed above prior to the recent retest.

Yet more major influence is now likely further COVID-19 Delta concerns. After its inability to sustain weakness back below the 14.20, next resistance into 14.40-.50 is currently being tested again, with higher resistance into the 14.70 and 15.00 areas.

Even when other EMERGING CURRENCIES have reacted to the downside of late, the **RUSSIAN RUBLE** had seen **USD/RUB** weaken on the back of sustained CRUDE OIL strength. The recent USD/RUB drop back below 75.00 since late April has seen it even slip below the 73.00-72.50 area prior to the recent recovery back above it.

That recent break was despite US sanctions and the weakness of other EMERGING CURRENCIES in the wake of the recent FOMC announcements and Chair Powell's press conference prior to recovering last week. Lower support is the 72.00-71.75 interim area (albeit still at a 10-month trading low) with the next major support still into the 71.00-70.00 area. However, on the recent OPEC disruption USD/RUB has rallied back to nearer the 75.00 area.

The **MEXICAN PESO** saw **USD/MXN** selloff after the early-mid March surge quickly violated the lower interim 20.90 congestion, with the interim 20.65 congestion also violated on the way to the broad berth next support in the 20.25 area. That included an important 20.30-.10 weekly chart gap from on the way up in March of last year that had already been violated last November.

It then failed once again into a retest of the additional significant historic congestion (2018-2019) in the 19.80 area, with the next hefty historic congestion as nearby as the recently very vigorously tested 19.65-.50 area. The overall bottom of the very significant late-2018 through early-2020 range is not until the 18.50-.40 range.

That was even allowing there are interesting interim supports at 19.30 and into the 19.00-18.90 range. That said, the current rally back above 19.80 was more critical even after the previous failure as nearby as the 20.25 -.30 area. Now slightly back above 20.00 leaves that as the near-term consideration on a weakening 'risk-on' psychology despite what seems to be some support from sustained CRUDE OIL strength.

While higher hefty congestion is the 20.30 area, there is also the higher 20.65 congestion it traded very temporarily above in mid-June prior to weakening below 20.00 again. While next higher resistance is the 20.90 congestion, the focus shifts more so to the 20.00 and 20.30 congestion areas once again after its recent inability to fail on serial tests of the 19.80 area.

The **TURKISH LIRA** had been back under pressure since **USD/TRY** pushed back above the 8.00 hefty late 2020 congestion back in March. That left the LIRA as the outlier weak sister, with the inability of USD/TRY to drop below 8.00 turning into another bout of strength back above recent 8.20-8.23 short term congestion.

While it was slightly below that until mid-April, the recent weaker indication was a late April daily DOWN Closing Price Reversal from 8.3750, which left 8.40 as a general Tolerance that needed to be watched into May. Above that again in line with the other EMERGING CURRENCIES weakening on the temporarily diminished 'risk-on' psychology into mid-May reversed into USD/TRY strength once again.

While that left the door open to a full retest of last November's 8.5146 all-time high weekly Close, with only the 8.5765 coincident all-time high above that. While the LIRA seemed to firm on the mid-May return of the 'risk-on' psychology, that did not even bring a USD/TRY drop back to the 8.23-8.20 range. And while it recently did drop back near that lower interim congestion last week, it was then surging back up to somewhat above the late-May 8.7424 all-time high.

However, there has been a contrarian LIRA rally last week into this week on USD/TRY slipping back slightly below the late-May 8.7424 all-time high. That said, the more important near-term lower support is now the recent 8.52-8.45 area congestion and weekly MA-13 in that same area. And the weekly Oscillator indications suggest that the critical thresholds (reinforced by recent topping into the minor new highs) are into a very minor new high at 8.82 and then 8.97 and then well above that on the extended rally indications from 2018 and late 2020.

### **Reports & Events**

While still obviously less relevant (as we have been noting for some time and is most glaringly apparent again at present) on the standard report releases in the midst of more major global trade and political cross currents, the Weekly Report & Event Calendar (accessible for Sterling and higher level subscribers) is available via the [www.rohr-blog.com](http://www.rohr-blog.com) sidebar.

Even though midmonth can be a quieter time, not this particular week. While Monday's economic releases are rather limited, it also sees this month's OECD Composite Leading Indicators along with some of the central bank influences that are rife throughout the week. This is important because it will be a further window into the lack of any central bank withdrawal of accommodation even without any Fed or ECB rate decision.

Tuesday is significant for its major Asian influences like Chinese trade figures, and a BoE Financial Stability Report, quite a lot of European influence and US CPI. Wednesday sees and early RBNZ rate decision and statement into Japanese Industrial Production followed by UK and US inflation indications right into a BoC Interest Rate Decision and Statement and Monetary Policy Report followed by the post-rate decision press conference, Fed Chair Powell's 'Semiannual Monetary Policy Report to the Congress' before the House Financial Services Committee, and wrapping up with the Fed's Beige Book in the early afternoon.

Thursday is another big day beginning with Australian Employment into major Chinese numbers and an NBS Press Conference. That is followed by UK Employment, US Weekly Claims, much other US data, and the Canadian ADP Employment Change, wrapping up with Fed Chair Powell's further 'Semiannual Monetary Policy Report to the Congress' before the Senate Banking Committee. While Friday is a bit lighter, it still holds the BoJ Interest Rate Decision and Policy Statement followed by Mr. Kuroda's press conference, Euro-zone CPI and quite a bit of US data, including Retail Sales.

Of course, as good as the revived 'risk-on' psychology may appear, the troubling spread of the COVID-19 Delta variant moving more rapidly than some health authorities had expected, especially in unvaccinated areas (even in the US.) As such, you will likely not be surprised that we obviously maintain our recent strong advice that has been fully vindicated again of late: Keep those seat belts firmly fastened.
